Individual

- Increased opportunities for social connection and participation
- Improved access to support and care for people feeling suicidal
- Improved capability to respond at potential tipping points and points of imminent risk
- Individuals experience local services linking effectively resulting in seamless service delivery

Community

- Increased community awareness of what is needed to prevent suicide
- Improved community strength and resilience
- Increased understanding of whole of community risk and protective factors, and how best to build resilience of communities and individuals
- Improved understanding, skills and capacity of frontline workers, families and carers

Service System

- Improved access to suicide prevention resources and information
- Systematic, long term structural interventions in areas of greatest need
- An environment that encourages and supports individual help-seeking
- Improved organisational capacity to respond appropriately to risk of suicide

Improved individual resilience and wellbeing

Reduced incidence of suicidal behaviour in the groups at highest risk

Improved community awareness of what is needed to prevent suicide

Increased community strength and resilience

Improved understanding of whole of community risk and protective factors, and how best to build resilience of communities and individuals

Improved understanding, skills and capacity of frontline workers, families and carers

Improved access to suicide prevention resources and information

Systematic, long term structural interventions in areas of greatest need

An environment that encourages and supports individual help-seeking

Improved organisational capacity to respond appropriately to risk of suicide
