HLTAP501A Analyse health information

Descriptor
This unit of competency describes the application of in-depth level of knowledge of anatomy and physiology required to analyse available health information in relation to specific services to be provided.

Employability Skills
The required outcomes described in this unit of competency contain applicable facets of Employability Skills.

The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Pre-/co-requisite units
This unit should be assessed after achievement of the following related competency unit:
- HLTAP401A Confirm physical health status

The unit should also be assessed in conjunction with competency unit(s) related to planning/delivery of specific health care services (e.g. complementary therapies, nursing or dental care).

Application
The application of knowledge and skills described in this competency unit relate to functioning independently to plan and provide services.

Some disciplines will require a state/territory regulatory determination regarding delegation and supervision.

This unit ensures individuals can apply in-depth knowledge of human anatomy and physiology in the delivery of specific services.

</table>
REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

**Essential knowledge:**

- In-depth understanding of the structure, physiology and normal functioning of all body systems.
- Understanding of the structure and function of cells, including:
  - cell/tissue requirements for survival
  - basic understanding of cellular respiration
- Transport systems:
  - active (primary) and passive (diffusion – simple, facilitated)
  - osmosis
  - forces (hydrostatic and osmotic)
- Recognition of the signs and symptoms of common clinical conditions and the (provisional) diagnosis of same
- An understanding of pharmacological processes and drug actions, indications and contraindications (appropriate to this level)
- An understanding of the impact of:
  - trauma (penetrating, blunt)
  - common environmental emergencies (diving, altitude, temperature etc)
  - overdose and poisoning
  - surgical insult
- Basic chemistry (molecules and compounds; chemical reaction, energy; acids and bases) and as related to metabolism, respiration, pH.
- Pathophysiology of diseases associated with each body system and the impact of disease on each body system and their related structures., especially in relation to potential impact of specific health procedures provided.
- Effects of biological maturation and aging processes on body systems and their components and in relation to specific health procedures provided.
- Defence system and immunity processes in relation to the whole body and the individual body systems and in relation to specific health procedures provided.
REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Essential skills:

Ability to:

- Describe in detail and articulate using appropriate and accurate terminology, the major components of each body system, their location, inter-relationships and associated pathophysiology, especially in relation to specific health care services.
- Explain processes and structures of human anatomy and physiology in relation to potential health issues associated with provision of specific health care services.
- Explain the structure and functioning of the body systems, relationships between these systems and the potential impact of specific health care services to be provided.
- Identify variations from normal functioning and potential interactions between body systems and other internal and external factors.
- Plan and deliver health care services appropriate to client’s health status in line with principles and concepts underpinning specific approaches, philosophies and regimes of health care.
- Refer to an appropriate practitioner for advice, guidance or confirmation in relation to health issues outside normal practice or own experience.
RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Understanding of anatomy, physiology and pathophysiology includes knowledge of the major body systems:

- Cardiovascular system
- Respiratory system
- Musculo-skeletal system
- Endocrine system
- Nervous system
- Digestive system
- Urinary system
- Reproductive system
- Integumentary system
- Lymphatic system
- The special senses – smell, taste, vision, equilibrium and hearing
- Immune system
RANGE STATEMENT

Common problems to be identified may include, but are not limited to:

- Common respiratory problems, such as:
  - asthma
  - upper respiratory tract infection
- Genitourinary conditions, such as:
  - incontinence
  - dysuria
  - prostatic cancer
- Gastro-intestinal and abdominal conditions, such as:
  - gallstones
  - gastroenteritis
  - diverticulitis
  - appendicitis
- Ear health conditions, such as:
  - otitis media
  - impairment
- Skin condition, infections and wounds, such as:
  - impetigo
  - dermatitis
  - pressure sores
- Dental problems, such as:
  - gingivitis
  - halitosis
  - abscesses
- Eye problems, such as:
  - myopia
  - impairment
  - cataracts
- Cardio vascular problems, such as:
  - congestive cardiac failure
  - thrombosis
- Nervous problems, such as:
  - cerebrovascular accident
  - dementia

Factors with potential to impact health may include but are not limited to:

- External factors, such as:
  - diet and nutritional factors
  - use of alcohol, tobacco and other substances
  - environmental factors impacting health
  - level and type of physical activity
  - surgical insult and anaesthesia
- Internal factors, such as:
  - inter-relationship between body systems
  - emotional responses
  - patterns of thinking
  - disease process
  - pathogens
RANGE STATEMENT

A health history may include:

- History of any presenting problem (character, severity and duration of symptoms)
- Client concerns and beliefs regarding their problems
- Past health history, including use of alcohol, tobacco and other substances
- Previous surgery
- Medications being taken
- Allergies
- Family circumstances, including identifying environmental health factors that may contribute to client’s health issues
- Basic dietary information, including diet history to determine nutrition and fluid intake

Factors responsible for abnormal readings may include:

- Differences in temperature measurements due to a range of internal and external body factors
- Effect of exertion and anxiety on pulse rate and blood pressure
- Faulty equipment or improper use of equipment
- Failure to correctly calibrate equipment
- Impact of environmental factors on equipment
- Surgical insult and anaesthesia

Information provided to client may include:

- Information about potential impact of a range of internal and external factors on health
- Information on likely causes and management of uncomplicated health conditions.
- Information on strategies to maintain good health and manage chronic health problems
- Information on specific health issues and available health care services/treatments
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate this competency unit:

- Candidates must demonstrate their ability to apply Essential Knowledge identified for this competency unit before undertaking independent workplace application.
- This competency unit should be assessed in conjunction with relevant competency unit(s) in delivery of specific services (e.g. complementary therapies, nursing or dental care).
- Evidence must demonstrate the individual’s ability to apply their knowledge within the requirements of an identified aspect of delivering health care or health care support services to a specific age group.
- Consistency of performance should be demonstrated over the required range of workplace situations relevant to an identified work role.

Access and equity considerations:

- All workers in the health industry should be aware of access and equity issues in relation to their own area of work
- All workers should develop their ability to work in a culturally diverse environment
- In recognition of particular health issues facing Aboriginal and Torres Strait Islander communities, workers should be aware of cultural, historical and current issues impacting on health of Aboriginal and Torres Strait Islander people
- Assessors and trainers must take into account relevant access and equity issues, in particular relating to factors impacting on health of Aboriginal and/or Torres Strait Islander clients and communities
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

**Context of and specific resources for assessment:**
- Assessment should replicate workplace conditions as far as possible
- Where, for reasons of safety, assessment takes place away from the workplace, simulations should be used to represent workplace conditions as closely as possible
- Resources for assessment may include access to materials and space as required to demonstrate competence, such as:
  - relevant organisation policies and procedures
  - anatomical models, charts and/or diagrams as required to support explanations
  - relevant equipment
  - workplace and simulated work environment

**Method of assessment may include:**
- Observation in the work place with questioning to address appropriate application of knowledge
- Written assignments/projects
- Case study and scenario as a basis for discussion of issues and strategies to contribute to best practice
- Questioning – verbal and written
- Role-play / simulation
