Subject: Fw: NEJM Article 27 October 2014 - Ebola and Quarantine [SEC=UNCLASSIFIED]

Good morning

This article, just over one page and an easy read, is a rapid response from US public health doctors to the announcement of the imposition of 21 day quarantine for health care workers by the Governors of NY and NJ.

I note, from news reports, that the CDC has advocated consideration of home quarantine for health care workers from Ebola treatment areas only where they are at high risk for having contracted the disease (eg needle stick injury), their new position being in line with our national, CDNA guidelines.

I am sending you the article as you will need to be aware of it. [Redacted]

Best wishes
Chris
