1.1 INTRODUCTION

The Professional Relativities Study (PRS) is being conducted by the National Centre for Classification in Health (NCCH) for the Medicare Schedule Review Board (MSRB). The PRS is one of three projects being conducted under the direction of the MSRB and the Medicare Schedule Review Task Force (MSRTF). The other two projects, Remuneration Rates Study and the Practice Costs study, are being undertaken as separate consultancies. An overview of the projects and terms of reference for the Remuneration Rates and Practice Cost Studies are provided as Attachment 1.

The PRS definitive study follows on from a feasibility study carried out in 1996 and early 1997 by the NCCH for the MSRB to examine the potential for mapping the professional components of services described in overseas schedules with the Medicare Benefits Schedule (MBS).

The overall aim of testing the mapping between the MBS and CPT was to see if the resource based relative value units developed in the United States during the 1980s and applied to the American Medical Association’s Current Procedural Terminology (CPT) could be applied to mapped MBS items.

Only the Therapeutic Procedures in Category 3 of MBS were in scope for the feasibility study. That study demonstrated that it is possible to map between MBS and CPT and to gain consensus from expert clinicians on relative intraservice work (time and intensity) for items in the MBS. However, the maps are not sufficiently robust on their own to determine the relative values of the mapped MBS items.

The PRS requires Australian clinician input to develop Resource Based Relative Values for all specialties. Data to be used includes clinicians estimates of time and ratings of intensity and maps between MBS and CPT. The relative value units determined for core items will be used to establish relative values for all items within a specialty and to establish link items between specialties. The study covers over 34 specialties (see Attachment 2) and the following categories within the MBS:

- Category 1 - Professional attendances
- Category 2 - Diagnostic Procedures and Investigations
- Category 3 - Therapeutic Procedures
- Category 4 - Oral and Maxillofacial Services

As stated in the introductory letter from the NCCH, the study requires a complex organisational effort to bring together specialty groups of clinicians and technical advisers in a series of meetings which are interrelated and which will result in advice and reporting to the MSRB at regular intervals.
1.1.1 Clinician Consultants involvement

The role of Clinician Consultant involvement in the PRS is the development of Relative Value Units for core items selected within each specialty group. RVUs will subsequently be reviewed by specialty Consensus Groups and confirmed by the Advisory Panel on Professional Relativities in Medical Services.

Clinician Consultant involvement in this Study is as follows (see also sections 1.2 and 1.3):

**PHASE 1** (via correspondence)

- Review the appropriateness of items allocated (Category 2-4) to the relevant specialty by the NCCH
- Rank MBS procedural items in terms of the total work value (i.e. time and intensity) of each item
- Estimate times for component parts of each MBS item (preservice, intraservice and postservice)
- Rate the intensity of each MBS item

These activities will be used for formula development and selection of core items. See Section 3.1 “Guidelines for ranking and rating MBS procedural items”.

**PHASE 2** (face to face meetings)

a) Clinician Consultant Meetings

- Review maps between MBS and CPT
- Review attendance items and incorporate into procedural item rankings
- Undertake ratings of intensity for attendance items
- Confirm estimates of time and ratings of intensity for procedural items
- Estimate time and rate intensity of items not already reviewed
- Confirm core and link items
- Draft relative value units (RVUs) for core items
- Make recommendations to the Consensus Groups regarding the above

*Note: New attendance item documentation will be forwarded to Clinician Consultants prior to meetings*

b) Consensus Group Meeting

Attend Consensus Group meeting where core item and remaining item RVUs will be determined.

*Note: Consensus Groups will be provided with feedback on rankings, time estimates and intensity ratings developed by the Clinician Consultants and core item selection during Phase 1 and 2. They will review these in collaboration with the Clinician Consultants.*
1.1.2 Selection of Clinician Consultants

The NCCH has used its network of Clinician Consultants and representatives from the professional groups to invite your participation as a Clinician Consultant on this project in accordance with the specialty groups approved by the MSRB. In some specialty areas we have invited more than one Clinician Consultant to participate in the study (refer to Attachment 2 showing participating clinicians). We have provided the addresses and phone numbers of the Clinician Consultants for your specialty where applicable (see Attachment 3). It is hoped that agreement on the rankings and initial ratings (Phase 1) can be managed via phone or fax.

The NCCH also encourages consultation with other colleagues in your specialty for Phase 1 of the project.

Where Clinician Consultants (particularly Physicians) are reviewing fewer procedural items (eg <20 items), the NCCH recommends that they meet as a larger CC group to combine their rankings and ratings. This will ensure that RVU development is statistically meaningful for these specialties (refer to section 1.5 for details).

1.1.3 Attendance items

The MBS attendance items have been revised by the Medicare Schedule Review Board. It is intended to develop RVUs for these newly developed attendance items.

A Consensus Group has been formed to review the attendance items. This group will meet twice. The PRTC recommended that the first meeting of this group be held prior to the Clinician Consultants’ meetings to establish guidelines for developing attendance RVUs.

All Clinician Consultants will be asked to rank and rate the new attendance items with their procedural items in Phase 2 of the PRS.
1.2 METHODOLOGY

The ultimate outcome of the PRS project is a set of work related Relative Value Units (RVUs) for each item in Categories 1-4 of the MBS. These RVUs will be formula based to:

(a) make explicit the basis for the Resource Based Relative Value Scale (RBRVS)
(b) maximise acceptance by the medical community, and
(c) facilitate future updates

The methodology is outlined by the following stages (refer also Attachment 4):

1. Establish rules and regulations for study  
   PRTC

2. Map MBS/CPT items  
   NCCH

3. Sort MBS items by specialty for RVU development  
   NCCH

4. Rank items based on total work value, estimate times and rate intensities for selected items  
   CCs

5. Regress rankings against times and intensity ratings to develop formula.  
   Estimate efficacy of formula and its’ consistency with rankings  
   NCCH  
   (Statistician)

6. Choose core and link items based on MBS item ranks, good maps, and frequencies  
   NCCH/CCs

7. Provide RVUs for core items based on the US RVUs from good maps and information on times and intensity ratings  
   CCs

8. Complete estimates of times and ratings of intensity  
   CCs

9. Project core RVUs to remaining items using rankings  
   NCCH  
   (Statistician)

10. Re-evaluate formula and test application to RVUs for all items  
    NCCH  
    (Statistician)

11. Confirm draft RVUs and link items  
    CGs

The study stages are discussed in more detail over page.
1. Establish rules and regulations for study (PRTC)

The PRTC is responsible for recommending definitions, rules and criteria for application throughout the study.

2. Map MBS/CPT items (NCCH)

The MBS items are being mapped to CPT codes in order to inform about appropriate CPT RVUs for use in the Study. Mapping is being undertaken from MBS items to CPT codes (forward maps) and from CPT codes to MBS items (backward maps). The 'good' maps will be used as a major criterion for the selection of core items for which RVUs will be developed. “Good” maps will be determined from the map ratio and rating and consistency of terminology of MBS items and CPT codes.

3. Sort MBS items by Specialty for RVU development (NCCH)

It is important to the outcome of the project that item numbers are categorised according to the Speciality in which clinicians provide their services. Information received from the Medicare Benefits Branch (i.e. frequencies of services provided by MBS item numbers for Specialty groups) will be analysed in order to categorise each item to a specialty. Where MBS items are performed by several specialists they will be reviewed by those Specialty groups which provide the highest proportions of services; preferably a maximum of two specialty groups per item. A list of Specialty Groups approved by the MSRB is provided in Attachment 2.

4. Rank items based on total work value, confirm time estimates and rate intensities for selected items (Clinician Consultants)

In order to choose core items, test the validity of a formula and ensure the ability to replicate RVUs for MBS items, it is necessary to rank the items within each Specialty (total N) in terms of the total work value. Ranking is necessary to enable the relative value determinations for the core items to be projected to the remaining items and will serve as the focal point in the development of the formula. Ranking means the ordering of items from 1-N where 1 is the item of most value to the specialty and N is the least. Where items are of equal value, these can be ranked together.

Clinician Consultants will be provided with MBS items. Printouts will be produced for each Specialty and sorted by MBS item number and overall rankings. Table 1 over page is an example:
TABLE 1
Ranking of MBS items

<table>
<thead>
<tr>
<th>MBS Item Number</th>
<th>Desc.</th>
<th>Freq.</th>
<th>Overall Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>XXXX</td>
<td>Radical</td>
<td>23</td>
<td>1</td>
</tr>
<tr>
<td>YYYY</td>
<td>Removal of</td>
<td>735</td>
<td>2</td>
</tr>
<tr>
<td>ZZZZZ</td>
<td>Biopsy...</td>
<td>2745</td>
<td>3</td>
</tr>
</tbody>
</table>

Some confirmation of time estimates and ratings of intensity will also be undertaken in stage 4.

The CC groups will be asked to:

a) **Estimate** pre, intra, post direct and indirect times as agreed by the PRTC

b) **Rate** within specialty
   i) cognitive skill, clinical judgement and communication skills
   ii) technical skill and physical effort, and
   iii) stress due to risk.

This has been illustrated in Table 2 below.

TABLE 2
Time Estimates and Ratings of Intensity

<table>
<thead>
<tr>
<th>MBS Item Number</th>
<th>Desc.</th>
<th>Freq.</th>
<th>Quality of map</th>
<th>Component ratings</th>
<th>Time</th>
</tr>
</thead>
<tbody>

<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>XXXX</td>
<td>Radical</td>
<td>23</td>
<td>1</td>
<td>2</td>
<td>10</td>
</tr>
<tr>
<td>YYYY</td>
<td>Removal of</td>
<td>735</td>
<td>2</td>
<td>1</td>
<td>8</td>
</tr>
<tr>
<td>ZZZZZ</td>
<td>Biopsy...</td>
<td>2745</td>
<td>3</td>
<td>4</td>
<td>4</td>
</tr>
</tbody>
</table>

At this stage, estimates of time and ratings of work components for at least 20% of MBS items within each specialty would be necessary for preliminary testing of the formula.

5. **Regress rankings against times and intensity ratings. Estimate efficacy of formula and consistency with rankings (NCCH Statistician)**

Regression analysis will be used to explain the ranking of total work value in terms of times and intensity. This will have two purposes:

a) to test possible formulae
b) to provide feedback to the CCs about their rankings and ratings
6. **Choose core/link items based on MBS item ranks, good maps, and frequencies (NCCH/Clinician Consultants)**

   Core item selection will be based on the rankings provided by the CCs, the ‘good’ maps and frequency data. Both core and link items should ideally be high frequency items which have good maps and are evenly distributed throughout the rankings.

7. **Provide RVUs for core items based on the US RVUs and the time and intensity ratings data (Clinician Consultants)**

   RVUs for CPT items for good quality MBS maps will be provided to the CCs to review, using time estimates, intensity ratings and other information. Note that while the ranking of items and the estimation of times and the ratings of effort, skill and stress are significant data for the estimation of a formula, they do not link this formula to relative value. This step is accomplished by the RVU estimation for the core items. In this light the estimation of RVUs for the core items can be viewed as a calibration.

8. **Complete estimation of times and ratings of intensity (Clinician Consultants)**

   This work needs to be completed for validation of extrapolation/interpolation and ultimately so that all relative values can be formula based so that the final outcome of the project is based on a credible and defensible methodology. The attendance items will be ranked and rated with procedural items at this stage.

9. **Project core RVUs to remaining items using rankings (NCCH Statistician)**

   This will initially be accomplished via interpolation using the rankings and later revised on the basis of time estimates and ratings of intensity.

10. **Re-evaluate formula and test application to RVUs for all items (NCCH Statistician)**

    The regression analysis of step 5. will be repeated using the full data and interpolation of non core RVUs refined accordingly.

11. **Confirm draft RVUs and link items (Consensus Group)**

    To assist them in their review, the CGs will be provided with ordered lists of all items within each specialty. These will contain the draft times, intensity ratings, RVUs and a comparison of the RVUs with the rankings previously provided by the CCs.
1.3 STUDY PHASES

The methodology has been presented in terms of the study phases in Table 3 below. At the end of each phase, results will be reported to the MSRB so that subsequent phases can be redirected if necessary. *See also flow chart in Attachment 5.*

**TABLE 3**
PRS Study Phases

**PHASE 1**

**Step 1** PRTC
Recommend definitions, rules and criteria for application throughout study

**Step 2** NCCH
Map all items in MBS Categories 2 - 4 (as of May 1997 - undertaken concurrently with steps 1-5)
Evaluate quality of maps using criteria established by PRTC.

**Step 3** NCCH
Sort all MBS items (Categories 2-4) into specialty groups - separating attendance items from diagnostic and procedural items.

**Step 4** CCs
- confirm MBS procedural items selected by the NCCH for study within each specialty group
- rank all MBS procedural items within their specialty in terms of total work and in accordance with criteria set by the PRTC (the NCCH will have pre-sorted items in terms of anaesthetic times or proxy time to assist with this process)
- **estimate** pre, intra and post times and **rate** effort, skill and stress for at least 20% of items
*Note*: this work would be undertaken by correspondence

**Step 5** NCCH (Statistician)
Develop preliminary formula on the basis of the information assembled through step 4.

**Step 6** PRTC
Present results of formula testing, and mapping to second meeting of PRTC.

**Step 7** APPRMS
Provide information to Advisory Panel on Professional Relativities for Medical Services (APPRMS) on definitions, rules and criteria

**Deliverables** NCCH
First Interim Report to MSRB - Board to approve definitions, rules and criteria.
PHASE 2

Step 8  NCCH
Assemble additional data including frequencies for CPT mapped items, actual theatre times from hospital operating theatre systems, information from Department of Health and Family Services operating theatre service weight study, anaesthesia times for MBS items and MBS relativities using existing fees.

Step 9  CG
CG on attendance items to hold first meeting

Step 10 NCCH
Draft core and link items (for each specialty covering a representative range of activities based on quality maps with CPT, ratings of MBS items, volume, the cost of services and attendance items).

Step 11 CCs
Meet with CCs to establish RVUs for MBS core items and to complete the estimation of pre, intra and post times and the rating of effort, skill and stress for procedural items. Rank and rate attendance items.
The CCs will:
• check query maps
• check maps of all core items
• review attendance items and incorporate into procedural item rankings
• undertake ratings of intensity of attendance items
• confirm estimates of time and ratings of intensity for procedural items
• estimate time and rate intensity of items not already reviewed
• confirm core and link items on which inter and intra professional relativities will be established
• develop RVUs for core items (based on CPT RVUs)
• make recommendations to the Consensus Groups regarding the above.

Step 12 NCCH
Project core RVUs to remaining items using rankings.
Re-evaluate formula and test application to RVUs.

Step 13 NCCH
Distribute and present results of CC core RVUs to Consensus Groups (CGs) for confirmation of RVUs (all steps in the development of the RVUs by CCs will be presented).

Step 14 CGs
Meet with the CGs to ratify the draft RVUs and link items.

PHASE 2
(Cont’d)
<table>
<thead>

## 2. Committees

### PRTC

**Professional Relativities Technical Committee**
- **Members**: 7 Clinicians:
  - 1 GP rural
  - 1 GP metropolitan
  - 1 General Surgeon
  - 1 Specialist Surgeon
  - 1 General Physician or Paediatrician
  - 1 Specialist Physician
  - 1 Anaesthetist
  - NCCH Director
  - NCCH Project Manager
  - Statistician
  - Meeting Facilitators (5)
  - MSRTF (3)
  - MSRB (1)

- **Role**: Recommend definition of time - total service time, intra, pre and post.
- **Role**: Recommend effect of using existing MBS item relativities for RVUs.
- **Role**: Recommend formula for calculating time and intensity to establish RVUs.
- **Role**: Recommend methods for RVUs for consults, therapeutic & anaesthesia items.
- **Role**: Recommend criteria for choosing core & link items.
- **Role**: Recommend method for translating RVUs from core to remaining items.
- **Role**: Recommend criteria for accepting a good map.

### APPRMS

**Advisory Panel on Professional Relativities in Medical Services**
- **Members**: Clinicians from specialty craft groups
  - NCCH Director
  - NCCH Project Manager
  - Statistician
  - MSRTF (3)
  - MSRB members

- **Role**: Note and comment on PRTC rules, definitions, criteria, formulae.
- **Role**: Confirm RVUs for core and remaining items from CCs and CGs.
- **Role**: Confirm link items.
- **Role**: Provide communication to and from craft groups.

### CCs

**Clinician Consultants**
- **Members**: Clinician Consultant representatives of specialty craft groups
  - Attendance item Consensus Group
  - NCCH Project Manager
  - NCCH Project Officer

- **Role**: Decide 20 core items in specialty.
- **Role**: Review data on core items.
- **Role**: Establish times & intensity for core items.
- **Role**: Establish link items.
- **Role**: Make recommendations to Consensus Groups.

1.5 PROCESS OF SELECTING MBS ITEMS

Data from the Medical Benefits Branch of the Department of Health and Family Services were used to determine the frequencies for providers of each item. MBS items were allocated to specialities based on criteria recommended by the PRTC. The principle of using MBS data is to ensure that specialist providers of items are involved in the development of RVUs. Reliance on the MBS classification only would limit the allocation of items to some speciality groups.

Using 1996/97 claims data, MBS Items in Categories 2-4 were initially allocated to Specialties for ranking and for the estimation of times and intensities on the following basis:

1. Provided the specialty had performed a sufficient number of services (>3 and >12.5% of the total services), MBS items were first allocated to the specialty which provided most services for the item in proportion to the total number of services provided by that specialty.

2. Items were allocated to a second specialty if the item constituted more than 0.1% of the specialty’s workload, the specialty provided more than 25% of the total services for the item, no other eligible speciality provided more services and the item had not already been allocated to the specialty under.

3. Items were also allocated if the specialty performed the second most services (these being >3, >12.5% of total services and >0.1% of the services provided by the specialty) for the item in proportion to the total number of services provided by the specialty, and the item was not already allocated under (2).

For 487 items, there were insufficient claims data to make an initial allocation according to these three rules. These items were allocated manually to a single specialty on the basis of the location in the schedule, in accordance with the allocation of similar items or using the exception report.

An exception report of major providers who missed out on allocation was produced and reviewed and submitted to the Task Force. This report was used to manually allocate items to major providers if the major provider:

- provided ≥50% of the item
- provided <50% of the item and the item was in the appropriate section of the schedule or relevant to the providers specialty.

Where groups have discrepancies over including/not including items in their Specialty area, these will be revised by the NCCH and redistributed by way of the Clinician Consultant meetings.

Attachment 6 shows the number of items allocated to each Specialty Group based on the above criteria. No MBS items were allocated to Emergency Medicine based on the above criteria, mainly because there were very few services provided by this group overall. Given that there is considerable commonality between items allocated to General Practice and items performed by Emergency Medicine Practitioners, the NCCH has recommended that Emergency Medicine be represented at the General Practice CC. Endocrinology, Geriatrics and Infectious diseases were grouped with General Medicine for the same reason.
Specialty Groups for Clinician Consultants Meetings

After analysis of MBS data and allocation of MBS items, it was found that some CC groups would not be viable on their own in terms of the number of procedural items for RVU development. It is important to the outcome of the PRS that all specialty craft groups are involved throughout the process of RVU development. Therefore, in order to make these groups viable (ie to ensure that RVU development is statistically meaningful for the specialty), the following consolidation is recommended for the Clinician Consultant meetings and Consensus Groups:

<table>
<thead>
<tr>
<th>Combined Group</th>
<th>Specialities</th>
</tr>
</thead>
<tbody>
<tr>
<td>Group 1</td>
<td>Anaesthesia</td>
</tr>
<tr>
<td></td>
<td>ICU</td>
</tr>
<tr>

(Please note that the final allocation of items has been made on this basis)

The above group combinations have been selected on the basis that they have some high frequency MBS items in common. This does no negate the importance of each specialty craft group being fully represented for the PRS, but ensures that groups with small numbers of procedural items are viable in terms of the study processes.

All CC groups will initially rank and rate items as allocated (refer Attachment 6). The above combinations are only recommended for CC meetings and Consensus Group review.
Attachments

1. • Overview of Projects (MSRB)
   • Terms of Reference - Remuneration Rates Study
   • Practice Costs Study

2. Clinician Consultant Groups Recommended for the PRS

3. Clinician Consultants by Specialty - Names and Addresses

4. Methodology

5. Outline of Processes

6. Allocation of MBS items for review by Specialty Groups
Overview of Projects (MSRB)

- Linking process (using models to test assumptions etc.)

- Work = Time * intensity

- Relativities - Consultations and procedures
- Relativities - New patients versus existing
- Development of a common scale

- Professional relativities
- NCCH consultancy

- Loadings for indirect time, out of hours etc.

- Bundling versus unbundling of post operative care

- Definition of full-time practice
- Opportunity costs of training
- Effective working life, whole of life earnings, superannuation etc.
- Lifestyle factors (eg. after hours)

- Hay/Trowbridge consultancy

- Remuneration rates

- Combined Fees
- Implementation process

- Effective activity levels Services provided in rooms and outside practice setting

- Resource needs
- Direct and indirect costs
- Fixed and variable costs, cost drivers etc.
- Efficient activity levels

- Practice resources and costs
- Price Waterhouse consultancy

- Practice cost component of service

- Separate identification of technical components
- Recovery of general overheads by episode, doctor time or both
- Services provided in rooms and outside practice setting
TERMS OF REFERENCE AND REMUNERATION RATES AND PRACTICE COST STUDIES

1. Remuneration Rates Study

Under the direction of the Medicare Schedule Review Task Force and within the context of a cost or resource (non market) based approach for setting fees for medical services covered by the General Medical Services Table of the Medicare Benefits Schedule the consultants shall:

a) identify the factors that are considered relevant in establishing “benchmark” and differential net earning rates for representative classes of doctors providing private medical services in Australia. Relevant factors may include issues such as income foregone in obtaining the requisite skills and experience, duration of professional working life, disruption to family life etc;

b) provide comparisons of the net earning rates and hours of work of representative classes of doctors in the public and private sectors in Australia having regard to superannuation and other “whole of life” income related matters;

c) provide similar comparisons with the net earning rates of other professionals in Australia; and

d) provide comparisons of net earning rates in Australia and in other countries with similar living standards using generally accepted benchmarks such as average weekly earnings and purchasing power equivalents.

The consultancy shall commence on Monday 4 August 1997 with a final report to be provided to the Medicare Schedule Review Board by Friday 21 November 1997.

2. Practice Costs Study

Under the direction of the Medicare Schedule Review Task Force and within a process of consultation with representative medical groups the consultant will:

a) develop the criteria to apply in the determination of resources required to operate a reasonably efficient private medical practice across a range of major specialty groups;

b) construct representative resource based models based on reasonably efficient private medical practices to assist in establishing fair and reasonable non professional medical components in private medical fees across the range of major specialty groups;

The models must:

- identify the physical resources incorporated into each practice type;
- apply reasonable efficient cost and utilisation rates to those resources;
- provide an orderly classification and allocation of costs into the following cost groups: direct costs; indirect costs; professional indemnity insurance; and working capital;
• provide sufficient flexibility to allow for inclusion of new items of service and changes of mix of services with consequent adjustments to resources allocated to other items within the model;

• provide the capacity for differential cost analysis in relation to the following practice variables:
  - location of service;
  - practice type;
  - size of practice; and
  - geographical location of practice; and

• allow for the ongoing review, evaluation and adjustment of practice costs.

c) Identify options and recommend a set of costing principles to apply to the allocation of resources and costs within the model.

d) Undertake differential cost analyses in relation to costs affected by the location where services are provided, the practice type, size of practice and geographical location of practice, and report on the policy issues arising; and

• analyse and report on the variances between groups of costs of services across a range

e) Through application of the models describe and quantify the financial impact of options for determining cost recovery rates which could represent the practice cost component for fees for items of service listed in the Medicare Benefits Schedule.

f) The consultancy shall commence by Tuesday 1 July 1997 and be completed as soon as practicable, but no later than Thursday 30 April 1998.

**PROFESSIONAL RELATIVITIES STUDY - METHODOLOGY**

**Principal Steps**

- **Step 1**: PRTC to recommend definitions, rules and criteria for study

- **Step 2**: Map MBS items and CPT codes

- **Step 3**: Sort MBS items by Specialty Groups

- **Step 4**: Rank items based on total work value. Confirm times and rate intensities for 20% of items

- **Step 5**: Regress rankings against times and intensity ratings to develop formula

- **Step 6**: Choose core and link items

- **Step 7**: Provide RVUs for core items based on US RVUs

- **Step 8**: Complete estimates of times and ratings of intensities

- **Step 9**: Project core items to remaining items

- **Step 10**: Re-evaluate formula and test application to RVUs

- **Step 11**: Confirm draft RVUs and link items

**Statistical Processes**

- **PRTC**

- **NCCH**

- **CCs**

- **NCCH (Statistician)**

- **NCCH/CCs**

- **CCs**

- **NCCH (Statistician)**

- **CGs/APPRMS**

**RVUs**
PROFESSIONAL RELATIVITIES STUDY - OUTLINE OF PROCESSES

PHASE 1
- Mapping
- Not specified

PHASE 2
- Selection of MBS items for each specialty
- PRTC Meeting 1 to recommend definitions, rules and criteria for study
- Information to APPRMS on definitions, rules and criteria (ongoing)
- Preliminary review and ranking of all MBS items by CCs
- PRTC Meeting 2 to evaluate formula testing and review maps
- Selection of core items to develop RVU using good CPT maps, frequency data and rankings of items within each specialty
- CG to meet on attendance level
- CGs to provide input to RUCs to establish RVUs for core items and to complete the estimation of times and the ratings of work intensity
- CCs to confirm RVUs recommended by the CCs
- NCCH to incorporate CG recommendations on RVUs
- Review and Confirm of RVUs and link items by APPRMS
- Assemble results

PHASE 3
- Estimation of times and rating of work intensity to commence
- Projection of core RVUs to remaining items using rankings
- Re-evaluate formula and test application to RVUs for all items

PHASE 4
- Statistical Analysis
- Data Management
- First Interim Report to MSRB
- Second Report to MSRB
- Final Report to MSRB

Outcomes Report (without attachments)
Professional Relativities Study

Professional Relativities
Technical Committee

Outcomes Report -
Meeting No.1

Date: Saturday 23 August 1997
Venue: Kingsford Room, Sydney Sheraton Airport Hotel
Cnr O’Riordan and Robey Street, Mascot
Facilitator: A/Prof Rosemary Roberts

Report Date: 14 October 1997

National Centre For Classification In Health
Professional Relativities Technical Committee
Outcomes Report

The meeting was opened at 9.30 am by A/Prof Rosemary Roberts.

Present: As per list of Attendees
Apologies: Mrs Sue Walker, National Centre for Classification in Health (NCCH) Queensland.

1. INTRODUCTION

1.1 Aims of the Day

A/Prof. Rosemary Roberts outlined the aims of the day. These included:

i  an overview of the study methodology
ii an overview of the workplan and timeline
iii recommendations by the PRTC on:
   - definitions
   - criteria
   - methods
   - other study guidelines
iv review of division of specialty groups for the study
v calculation of weighted Relative Value Units (RVUs)

1.2 Guidelines for CGAI

John Popplewell spoke on the guidelines provided to the Professional Relativities Technical Committee (PRTC) in establishing ground rules for setting professional relativities.

It was explained that the Medicare Benefits Schedule would be the basis for the study. Only the professional work component of services would be addressed in this part of the study, with financial aspects of the study being undertaken by a separate consultancy examining remuneration issues. All services will have identifiable pre, intra and post service components, with expected variability in intensity within the “intra” components of many services, and that work is to be measured as a combination of time and intensity.

It was pointed out that the specialty Clinical Haematology should be included in the proposed specialty groups approved by the Medicare Schedule Review Board (MSRB). The NCCH will be recommending to the MSRB this and other groups be included in the study.
It was further recommended that “Sub-Specialties” within General Surgery, such as Colo-rectal and Upper Gastrointestinal need to be included in the study.

### 2. BACKGROUND TO THE PRS

#### 2.1 Study Methodology and Workplan/Timeline

The NCCH clarified the stages of the Professional Relativities Study (PRS) methodology. This included mapping Medicare Benefits Schedule and the U.S. Current Procedural Terminology (MBS/CPT) items, ranking of items, estimates of time and intensity, formula development, choosing core and link items, development of Relative Value Units (RVUs) for core items (using CPT RVUs), projection of core RVUs, review and confirmation of RVUs.

The NCCH was asked by members of the PRTC to clarify its selection process for inviting Clinician Consultants (CCs) to be involved in the study. It was explained that many of the CCs were known to the NCCH from previous working arrangements. The PRTC requested that these names be circulated to the committee.

It was pointed out that during the study consultations should be considered in the same context as procedures.

Clarification was sought as to why the Australian study was being modelled on the Harvard US study. It was stated that the US study is the most developed of any comparable international attempt at a similar study.

The issue of specialty group representatives for the Consensus Groups (CGs) was discussed. The Medicare Schedule Review Task Force (MSRTF) have written to specialty Societies and groups requesting 4 representatives each for the study. The PRTC is to be informed of all specialty group representatives for the study.

#### 2.2 Project Management and Committee Roles

The roles of the of the PRS committees were outlined.

The role of the PRTC is listed hereunder:

i. Recommend definition of time - total service time intra, pre and post.
ii. Discuss direct/indirect time and effect on MBS relativities.
iii. Recommend effect of using existing MBS item relativities for RVUs.
iv. Recommend formula for calculating time and intensity to establish RVUs.
v. Recommend methods for RVUs for consultations, therapeutic and anaesthesia items.
vi. Recommend criteria for choosing core and link items.
vii Recommend method for translating RVUs from core to remaining items.

viii Recommend criteria for accepting a good map.

3. RECOMMENDATIONS BY THE PRTC

Recommendations were sought from the PRTC for the items listed in the following technical papers:

3.1 Study Definitions

3.2 Formula for Use in Study

3.3 Criteria - good maps, core and link items

3.4 Methodology - for applying definitions, formula criteria

3.5 Rules - parameters for study application

3.1 Study Definitions

The PRTC comments and recommendations on the definitions are detailed in table format (refer to Glossary of Terms). Work is to be measured as a combination of time and intensity.

3.2 Formula for Use in Study

A formula for the PRS will be developed using regression analysis. The PRTC confirmed that the following components of relativities should be considered for inclusion in the formula:

i pre-service time

ii intra-service time

iii post-service time

iv cognitive skills, clinical judgement and communication skills

v technical skill and physical effort

vi stress due to risk

3.3 Criteria

3.3.1 Criteria for accepting a good map

The NCCH explained that there were three criterion for accepting a “good map” ie correlation between Medicare Benefits Schedule (MBS) and the U.S. Current Procedural Terminology (CPT) items:

i Good terminology rating

ii Good code to code rating

iii Known relativity between pre, intra and post service times for CPT and MBS
PRTC Comments:

Members asked about the homogeneity of MBS items and CPT codes and the use of CPT frequencies for accepting a good map.

A draft spreadsheet for calculating weighted RVUs based on the CPT RVUs and frequencies was tabled. The members queried the use of all frequency data for mapped items. The statistician will provide advice on these calculations.

3.3.2 Criteria for choosing core items

The PRTC agreed that the criteria for choosing core items should be based on the following:

i high frequency
ii good map - see 3.3.1
iii good spread throughout MBS item rankings
iv at least one multi-specialty item (ie item being ranked by more than one specialty)
v clinical importance

PRTC Comments:

No objections were raised. However it was noted that criterion iv above woudl not always be possible.

3.3.3 Criteria for choosing link items

i core items
ii high frequency in both specialties

PRTC Comments:

A question was raised as to qualifying “high frequency”. The statistician advised that in this context, high frequencies were relative to the distribution of MBS items within the speciality group.

It was agreed that the CPT RVU would be used as the benchmark for the link items between specialties.

The statistician explained that the RVUs would be used to test the formula, by analysing goodness-of-fit with time and intensity for each specialty.

3.4 Method

3.4.1 Methods for RVU development, therapeutic & anaesthesia items
Based on CPT results, time estimates and intensity ratings for core items

Based on interpolation/extrapolation and formula for non core items

**PRTC Comments:**

There was some concern about using United States (US) procedural times which are thought to be significantly longer than Australian procedural times. It was recommended that Australian times be used in the first instance and US times would be used to inform about differences in the RVUs.

### 3.4.2 Translating RVUs from core to remaining items

To be done initially mostly by interpolation (with some extrapolation) based on the rankings provided by the clinician consultants. Later this will be revised using the final formula.

**PRTC Comments:**

This involves projection from core items using interpolation (extrapolation) and information from time estimates and intensity items.

### 3.4.3 Linking Specialties

It was agreed that the study should address the establishment of cross specialty procedures and pairs of procedures between specialties of similar relative value. There was no further methodology established under this item.

### 3.4.4 Scope of application of RVUs already developed by Clinical Societies, Associations and Colleges.

The MSRTF has written to Colleges and craft groups for advice and information on any work undertaken in respect of relativities in their specialty crafts.

**PRTC Comments:**

It was advised that Anaesthetists already use relativities, based on intensity and time.

Members also commented that the specialist clinicians have been waiting for a standard for development of specialist relativities and that the PRS would address this gap. Discussion was held concerning the difficulties in developing RVUs within the specialty groups, such as: distinguishing between referred and non-referred cases, opportunity cost of training. However, it was agreed that where specialties had already established RVUs, these could be of assistance when ranking and rating intensities.
3.5 Other

3.5.1 Relativity of Attendance items to other items

Given the recent changes to the Attendance items in the MBS and the crossover of the old item numbers across specialties, the PRTC was asked to recommend a strategy for developing attendance RVUs.

PRTC Recommendations

The PRTC agreed that the new structure for attendance items should be used for the PRS.

It was further recommended that

i  each specialty group look at attendance items in conjunction with the procedural items

ii  a different method be used for allocation of Attendance items to specialties for the rating of intensity

iii  the Consensus Group for Attendances should meet earlier than planned in order to make recommendations to the specialty groups for the comparison of procedure and attendance items.

3.5.2 Criteria for assigning MBS items to Specialty craft groups

Two sets of preliminary analyses of MBS data will be used to assign items to specialty groups. Firstly, items used by each specialty group will be analysed. Secondly, a review of all items by service providers will be undertaken to ensure that the specialty providing the majority of services per item is included wherever practicable. In some instances a specialty may be responsible for a small percentage of the total frequency for a particular item number yet the same item number may represent a significant number of that specialty’s total work.

For example:  MBS item 50124 (Joint or other Synovial Cavity aspiration injection of...) has the highest usage for Orthopaedic and General Practice Specialty groups. However, it represents 95% of the usage of procedural items by Rheumatologists.

The statistician recommended that any item be given a maximum of 2 specialties for ranking and rating. This would minimise:

i  the analysis of rankings and ratings per specialty, and

ii  the time needed for analysis of link items.
It was further recommended that the frequency distribution per specialty should be used to allocate MBS items to specialties as opposed to pure frequencies.

**PRTC Recommendations:**

It was recommended that:

i. When selecting items for a group, MBS items will first be allocated to the specialty to which the item represents the highest proportion of items performed by that specialty.

ii. Secondly, items will be allocated to a specialty if the specialty provides a high percentage of services for the MBS item.

iii. Where a specialty has 100% of an item, (ie service provision) it should review the item regardless of the frequency distribution within that specialty.

iv. If GPs provide greater than 50%, they should be included for reviewing item.

v. If GPs are doing greater than 30%, they should be considered for reviewing item.

Subsequent to the draft PRTC Outcomes Report, MBS items have been assigned to specialty groups.

4. **OTHER BUSINESS**

The PRTC requested that the following information be provided to the committee:

1. Abbreviations relating to all components of the study
2. Names of the NCCH Clinician Consultants
3. Membership of all CGs - to be forwarded at a later date
3. Guidelines for Clinician Consultants (Phase 1)

3.1 Guidelines for ranking and rating MBS procedural items

3.2 List 1 - MBS items selected for Speciality Group (sorted by MBS item number) (SAMPLE)

3.3 List 2 - MBS items selected for Specialty Group (sorted by Anaesthetic time) (SAMPLE)

3.4 Disc containing a copy of List 1 and List 2 for optional use (excel sheet)

3.5 Worksheets for ranking and rating MBS items (SAMPLE)
3.1 GUIDELINES FOR RANKING AND RATING MBS PROCEDURAL ITEMS

These guidelines have been developed to assist with the ranking of MBS items, the estimation of time and rating of intensity. All MBS items in your specialty will require your attention for purposes of ranking and rating. Specifically, all items are to be ranked, and at least 20% of items are to be rated at this stage. The remaining items will be rated at the Clinician Consultants meeting. If time permits all items should be rated now. It is your choice as to the items to be rated, however we recommend that a cross section be chosen.

Although the order set out in the guidelines is to rank and then estimate time and rate intensity, the NCCH has no objection (in fact it makes good sense) to the estimates of time and ratings of intensity being undertaken prior to the ranking. The only proviso is that all items must be ranked at this stage. The ranking and rating procedures are described on the following pages. Note: ranking and rating of attendance items will be undertaken in Phase 2.

The following tools have been provided for your use:

1. **List 1 - Summary Sheet** - list of MBS items allocated to your Specialty (sorted by MBS item number)

2. **List 2 - Information sheet** - list of all items (sorted by MBS Anaesthetic time) to assist with rankings

3. **Worksheets** for each item divided into four sections:
   - **Section 1** MBS item number and description (as per MBS schedule)
   - **Section 2** Time estimates for MBS item
   - **Section 3** Ratings of intensity
   - **Section 4** Comments

4. Floppy disk with both List 1 and List 2

In order to test the formula for RVU development and to select core items the following tasks need to be completed by the Clinician Consultants at this stage of the Professional Relativities Study:

**Task 1**  **Review** Specialty items provided for appropriateness;

**Task 2**  **Rank** all MBS items according to work value from 1-N;

**Task 3**  **Estimate times** for pre intra and post service work components for each MBS item (at least 20% of items);

**Task 4**  **Rate** the intraservice intensity (1-10) for at least 20% of MBS items;

**Task 5**  **Record** rankings and ratings on worksheets provided (1 per item)

*Note: Feedback will be provided to Clinician Consultants on the implications of all rankings, time estimates and ratings of intensity.*
TASK 1  
Reviewing Specialty Items

Step 1
Please review your Specialty Items as provided to ensure that they are relevant to the work your specialty provides.

Step 2
Please forward any comments you may have regarding omissions, relevance and/or accuracy of the items

(comments section of worksheet may be used for this purpose)

Step 3
Please still include all items in your rankings and ratings at this stage.
**TASK 2**  
**Ranking MBS items**

*The ranking process involves placing each MBS item in order in terms of the total work value of that item. It requires your judgement of the total work value, ie time and intensity, for each item.*

**Step 1**

Please rank all items from 1-N, where 1 is the highest ranked item in terms of total work value and N is the lowest.

- you may use the worksheets provided for this procedure (for sorting items into ranks)
- List 2 has also been provided to assist with rankings
- where specialties have more than 50 items to rank and rate, these worksheets have been sorted into piles of 50 sheets

**Step 2**

Please use the box on the top right hand corner of the Worksheet to write the rank order of each item

- if time permits, you may wish to summarise rankings on List 1 or List 2 as a check
TASK 3  Estimating Time

For the purpose of the PRS, time includes the following components:

i  pre service time
ii  intra service time
iii post service time

Please refer to Glossary of terms and PRS definitions in Section 4.

Step 1

Please estimate the time taken to undertake the procedure for each MBS item in your specialty

- time should be estimated for pre, intra, and post service components (refer to glossary for definitions of pre, intra and post service time)

- At this stage time estimates are required for at least 20% of the total MBS items for your group, however, if time permits all times should be estimated.

Step 2

Please document your estimated times in section 2 of the worksheet provided for each item.

- time should be recorded in minutes.

Step 3

Please summarise your ratings on List 1 or List 2 (if time permits)
**TASK 4**  
**Rating Work Intensity**

*Intensity includes the following elements:*

- **i** Cognitive skill, clinical judgement and communication skills.
- **ii** Technical skills and physical effort.
- **iii** Stress due to risk to patient and/or difficulty of the procedure.

*Please refer to Glossary of terms and PRS definitions in Section 4.*

**Step 1**

Please rate the intra service intensity of each of your items according to the above elements and on a scale of 1-10, with 1 being the lowest order of scale and 10 being the highest order of scale. The median of the scale is 5.

- You may use half values to rate if you wish
- At least 20% of the total items is required. If time permits all items should be rated for intensity.

**Important Note:**

Only intra service time should be rated for procedural items

**Step 2**

Please record your ratings in section 3 of the worksheet

**Step 3**

Please summarise your ratings on List 1 or List 2 (*if time permits*)
**TASK 5  Recording Procedure**

**Step 1**
Please ensure that each worksheet has been given a ranking number and that time estimates and intensity ratings are recorded on the worksheet for the items rated.

**Step 2**
List 1 is provided to enable you to summarise your information, however, List 2 may be more useful for this purpose.

**Step 3**
*Optional*
A computer disk is also provided for the recording of this information if you wish to utilise it.

**Step 4**
Would you please return the worksheets, List 1/2 (if completed) and computer disc (if used) to the NCCH in the envelope provided.

### 1. MBS ITEM INFORMATION

**MBS Item Number**

11900

**MBS Description**

Urine flow study including peak urine flow measurement, not being a service associated with a service to which item 11918 applies

**Total frequency (1996/97)** 23486

**Anaesthetic time (MBS)**

**Schedule Fee (derived)**

$20.25

### 2. TIME ESTIMATES FOR MBS ITEM

### 4.2 GLOSSARY OF TERMS AND PRS DEFINITIONS

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Anaesthetic Time</td>
<td>Anaesthetic time begins when the anaesthetist begins to prepare the patient for anaesthesia care in the operating room or in an equivalent area and ends when the anaesthetist is no longer in personal attendance, that is, when the patient may be safely placed under the supervision of other personnel.</td>
</tr>
<tr>
<td>Cognitive Skill</td>
<td>First component of intensity (PRS)</td>
</tr>
<tr>
<td>Clinical Judgement</td>
<td>? )For procedures - rated only for “intra service” time, with an average taken for pre and post service times.</td>
</tr>
<tr>
<td>Communication Skills</td>
<td></td>
</tr>
<tr>
<td>Core Item</td>
<td>Items to be selected for development of RVU estimates</td>
</tr>
<tr>
<td>Current Procedural Terminology</td>
<td>System for coding physician services developed by the American Medical Association to file claims with Medicare and other third-party payers; level 3 of the HCFA Common Procedure Coding System (HCPCS)¹</td>
</tr>
<tr>
<td></td>
<td>The CPT is a listing of descriptive terms and identifying codes for reporting medical services and procedures performed by physicians²</td>
</tr>
<tr>
<td>Direct Time</td>
<td>Face-to-face time with patient.</td>
</tr>
<tr>
<td>Extrapolation</td>
<td>Projection from known results to unknown cases where the unknown cases lie outside the range of the known cases</td>
</tr>
<tr>
<td>Indirect Time</td>
<td>Non face-to-face patient related time</td>
</tr>
<tr>
<td>Interpolation</td>
<td>Projection of known results to unknown cases where the unknown cases lie within the range of the known cases</td>
</tr>
<tr>
<td>Term</td>
<td>Definition</td>
</tr>
<tr>
<td>-------------------------------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Intensity</td>
<td>The three components of intensity for the purpose of the PRS are: i) cognitive skill, clinical judgement and communication skills ii) technical skill and physical effort iii) stress due to risk - risk to patient and/or difficulty of procedure</td>
</tr>
</tbody>
</table>
| Intra Service Time            | **For procedures:** time in which the service provider is in direct contact with the patient in the procedure room.  
                             | ? *For most procedures this would be ‘skin to skin’ time ie. opening to closing. For others it would include positioning of the patient.*                               |
|                              | **For consultations:** Face-to-face time with the patient (excluding pre-service time)                                                                                                                       |
| Linking Specialties          | Where the same procedure is carried out by different specialties or the items are of equal professional work.                                                                                     |
|                              | Two approaches for data linking are possible: i) MBS items carried out by different specialties ii) linking different item numbers                                                                 |
| Mapping                      | The term ‘mapping’ refers to the process of finding an ‘equivalent’ code between two classifications enabling interpretation of one classification to the other 3 |
| Post Service Time            | **For procedures:** Closure or end of service to completion of normal “after care”.  
<pre><code>                         | ? *Includes Recovery, ICU, CCU.*                                                                                                                                                                      |
</code></pre>
<p>|                              | <strong>For consultations:</strong> Time spent on specific service after cessation of face-to-face contact.                                                                                                              |
| Pre-Service Time             | Time taken to prepare for a specific service.                                                                                                                                                            |
|                              | ? <em>For procedures includes dress, scrub and wait.</em>                                                                                                                                                       |
| Ranking                      | Placing items in order eg 1-N                                                                                                                                                                            |</p>
