Meeting #16

10/03/2023

An elderly couple, a man and a woman, are sitting together and looking at a smartphone. The man is wearing glasses and a brown sweater, and the woman is wearing a brown sweater over a yellow shirt. They are both smiling. The background is a blurred indoor setting with warm lighting.

Healthcare Identifiers Framework project

Overview of engagement opportunity

Anastasia Mastoris

Director | Digital Health Foundations Policy

Background, context and objectives

“Like most practices we’ve got a fragmented system that we’ve cobbled together as technology developed, particularly over the last five or six years...the learning curve for newcomers...can be pretty steep.

You know, we’ve got practice management software, we’ve got a third-party booking system, emails, scanning, faxing, ePrescribing, referrals, etc.” (Practice Manager).

Transitions of care. Australian Digital Health Agency Commissioned Research with FiftyFive5, 2022

What are Healthcare Identifiers (HIs)

Individual Healthcare Identifier (IHI)

1

- Used to identify an individual health care recipient for health care purposes.
- Automatically assigned to individuals eligible for Medicare, but available on request to all other healthcare consumers

Healthcare Provider Identifier – Individual (HPI-I)

2

- Used to identify an individual healthcare provider (e.g. GP).
- Automatically assigned to an individual provider at the point of AHPRA registration, and available on application to members of a professional association with certain characteristics.

Healthcare Provider Identifier – Organisation (HPI-O)

3

- Used to identify a healthcare provider organisation.
- Organisations must register to use the HI Service.
- A single practice requires a 'seed' HPI-O and a larger organisation may require 'seed' and 'network' HPI-Os for subordinate organisations.

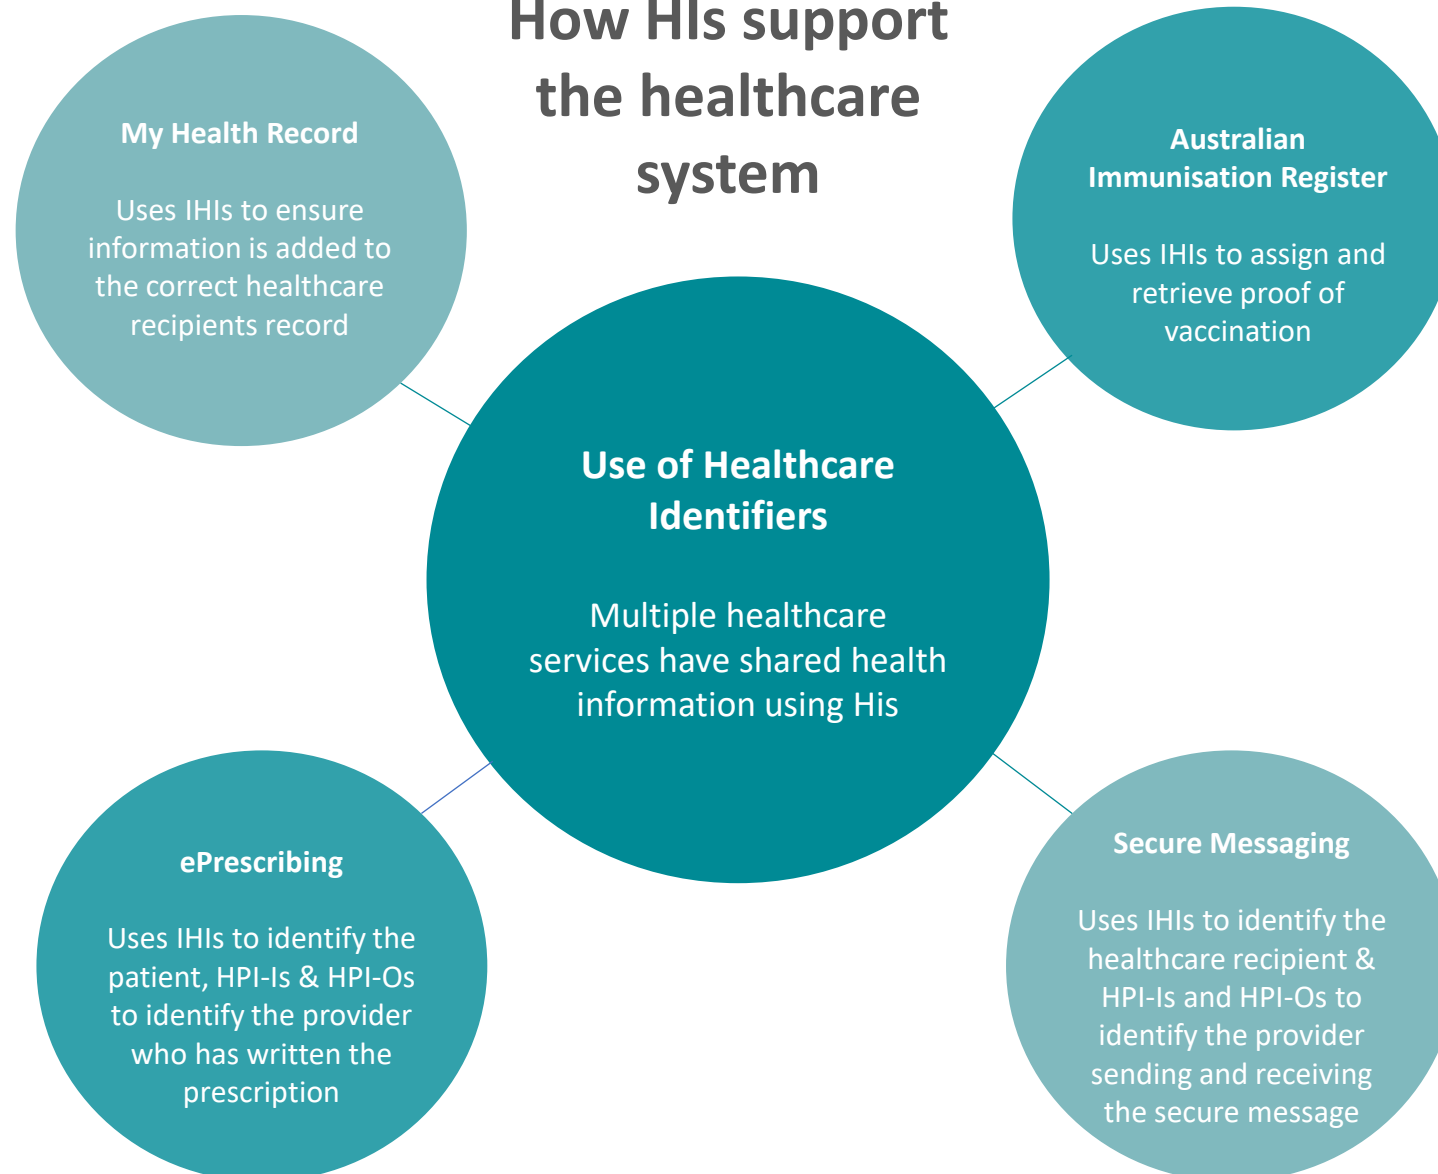

- Healthcare Identifiers (HIs) are unique numbers allocated to healthcare recipients, healthcare providers and healthcare organisations in Australia by the Healthcare Identifiers Service (HI Service)
- There are three types of Healthcare Identifiers
- It is important to note that a HI does not contain any health information

- Services Australia are the 'HI Service Operator'.
- The Australian Digital Health Agency act as the 'Product Manager', and represent the interests of HI Service users.
- The Department of Health and Aged Care manage the legislation on behalf of the Minister.

Objectives of Healthcare Identifiers

- Consistently associate health information with the correct healthcare recipients
- Identify the relationship between an individual provider and a healthcare provider organisation
- Support the operation of security and access frameworks, including authentication to access national digital healthcare services
- Since 2010, more than thirty-one million individual healthcare recipients, more than one million healthcare providers, and over 24,000 healthcare organisations have been assigned an HI

How HIs support the healthcare system

Key findings on HIs

2013 and 2018 HI Service Review

- The HI Service was achieving its core objectives and operating effectively, however,
- It was not meeting its full ability or delivering intended benefits
- There are some legislative limitations in using HIs
- There is a lack of awareness leading to creation of alternative identifiers

Not achieving full potential

2020 My Health Record Act Review

- Issues with how HPI-O seed and network structures have been implemented
- The need to identify health supporting organisations and professions
- Consideration to be provided to revoking HPI-I exemptions to ensure maximum use of the MHR system

Need to increase HPI-O and HPI-I Use

Drivers and mandates for change

**National Health Reform Agreement
(2020 – 2025)**

**Australia's Primary Health Care 10 Year Plan
(2022)**

***Draft Connecting Australian Health Care:
National Healthcare Interoperability Plan***

Achieving digital health and connected care objectives, as well as overcoming the many challenges the health and care systems are currently facing, is entirely reliant on meaningful interoperability and the accurate identification of individuals, healthcare providers and organisations.

Objectives of the HI Framework Project

What we want to do

- We want to ensure that Healthcare Identifiers can and will be used as the common identifiers across healthcare services
- Widespread use of HIs will underpin health system interoperability and data quality, enabling the provision of high-quality and sustainable healthcare

Increasing the *use and usability* of Healthcare Identifiers

Why now

- The current HI Framework reflects public attitudes and expectations on information sharing and digital services at the time it was established in 2010
- Australia still has a siloed health system which is at odds with how people want to use the system
- Although there is more digital record management, most records are created and stored in standalone systems
- The pandemic highlighted the need for governments to provide more accessible and connected digital healthcare services

To continue to have affordable, high-quality healthcare we need to connect all elements of the healthcare system using digital technology

Outcomes and benefits of the HI Framework Project

Improved Clinical Safety and Outcomes

Improved transfers of care across care settings, improved patient identification, enhanced provider accountability, enhanced government preparedness

Improved Consumer Experience and Protections

Reduced requirement to divulge personal information as identifiers, enhanced consumer choice in use of identifiers

Improved Service Efficiency

Simplified registration, reduced data errors, improved data governance, enhanced validation capabilities, lower overhead of managing multiple identifiers

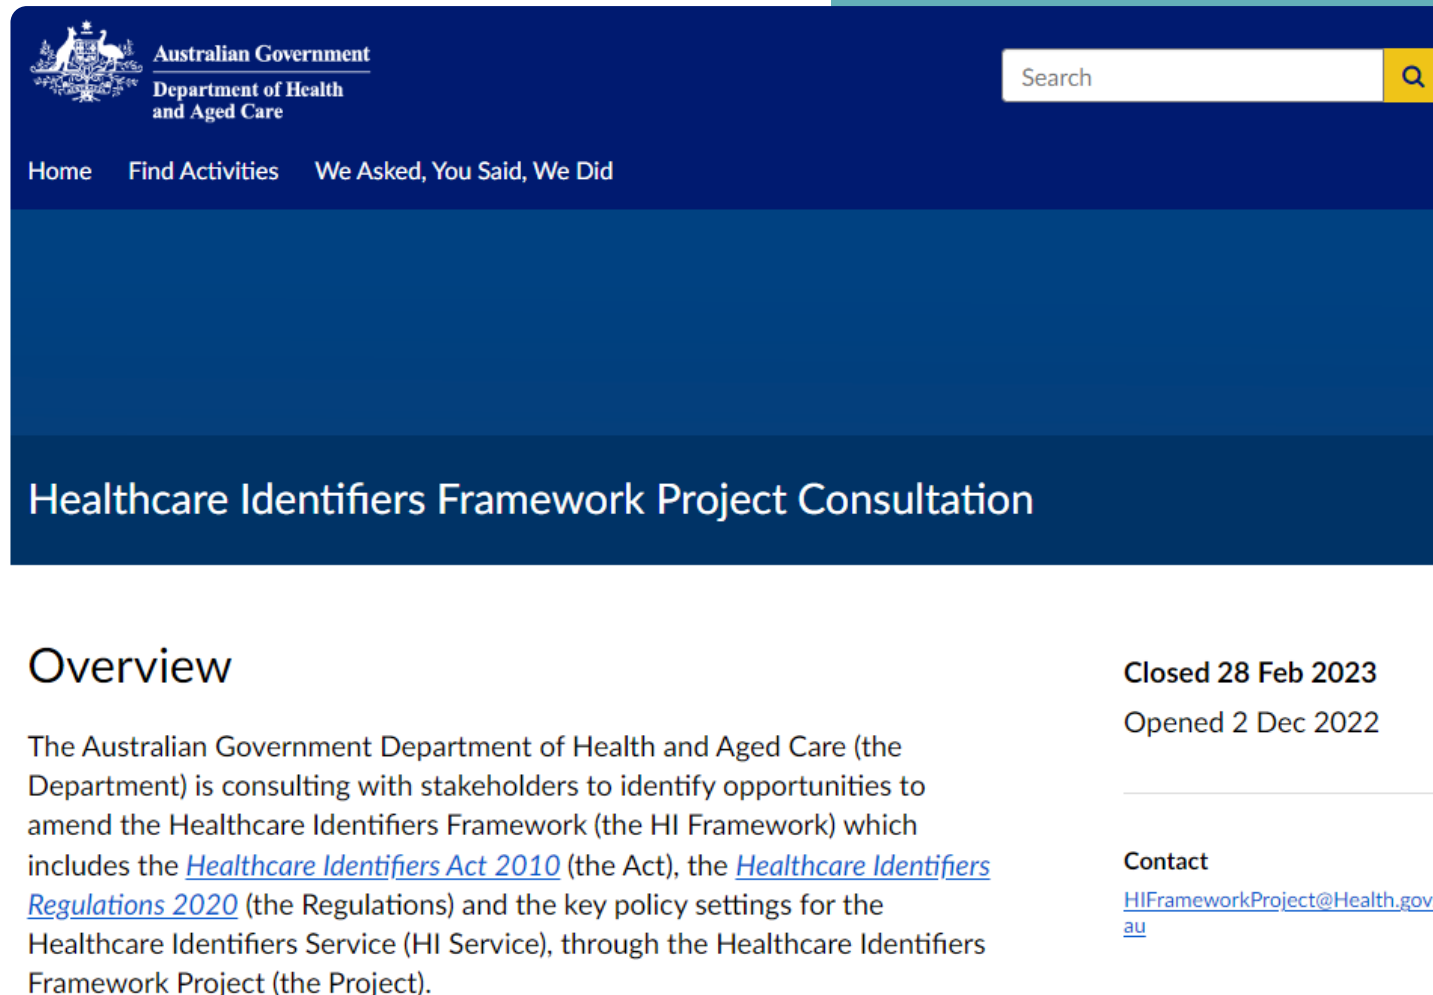

Improved Healthcare Policy

Improved ability to use data for planning, monitoring, evaluation and research

The public consultation

We sought to engage with a broad range of stakeholders to help us understand how we can improve the Act and the HI Service to address the key problem statements.

The screenshot shows the official website for the Healthcare Identifiers Framework Project Consultation. The header features the Australian Government coat of arms and the text 'Australian Government Department of Health and Aged Care'. A search bar is located in the top right corner. Below the header, there is a navigation menu with links for 'Home', 'Find Activities', and 'We Asked, You Said, We Did'. The main content area has a large blue banner with the title 'Healthcare Identifiers Framework Project Consultation'. Below this, the 'Overview' section provides details about the consultation process, mentioning the 'Healthcare Identifiers Act 2010' and 'Healthcare Identifiers Regulations 2020'. On the right side, it states the consultation is 'Closed 28 Feb 2023' and 'Opened 2 Dec 2022'. A 'Contact' section at the bottom right provides an email address: HIFrameworkProject@Health.gov.au.

Healthcare Identifiers Framework Project Consultation

Overview

The Australian Government Department of Health and Aged Care (the Department) is consulting with stakeholders to identify opportunities to amend the Healthcare Identifiers Framework (the HI Framework) which includes the [Healthcare Identifiers Act 2010](#) (the Act), the [Healthcare Identifiers Regulations 2020](#) (the Regulations) and the key policy settings for the Healthcare Identifiers Service (HI Service), through the Healthcare Identifiers Framework Project (the Project).

Closed 28 Feb 2023
Opened 2 Dec 2022

Problem statements and objectives

- | | | | |
|----|--|---|---|
| 01 | HI use in programs, services and systems | → | Increasing the number of programs, services and providers that use HIs by default is fundamental to increasing interoperability and achieving connected care. |
| 02 | Scope of healthcare and provider eligibility | → | Achieving connected care relies on the use of HIs across a broad range of healthcare programs and services. Healthcare recipients may benefit from broader provider and service eligibility for HIs. |
| 03 | Clarity around HI use by healthcare administration entities and uses | → | HIs were always intended to be used in all aspects of healthcare, including administration. But many organisations currently cannot use them to their full potential due to real and perceived legislative limitations. |
| 04 | Applications and structures of HPI-Os and HPI-Is | → | Identifying, communicating, and working with individual healthcare providers and provider organisations should be logical and simple. HIs should be able to be useable in a range of healthcare programs. |
| 05 | Healthcare consumer and provider choice | → | Individuals should be able to be active participants in their healthcare. The Act and the HI Service should empower individuals to disclose their own IHI for more purposes to enable better healthcare outcomes. |
| 06 | Support for healthcare technology services | → | To support a modern healthcare environment, the Act and the HI Service must allow for flexibility in how platforms and applications connect an individual to their healthcare data, and providers to one another. |
| 07 | Clarity around permitted uses and penalties | → | We need clear policy and legislation to provide confidence about what is and isn't permitted and how privacy and security are protected. |
| 08 | Flexibility and agility to support evolving use cases | → | The Act and the HI Service must allow for current use cases. They must also be adaptable to new models of healthcare, as they evolve. |

We want to hear from you!

Australian Government

Department of Health and Aged Care

24/7 Nursing

Overview of upcoming engagement opportunity

Phil Fleischer

Director | Transformation & Quality Branch

Jim Lewis

Nurses 24/7 Project Manager | Transformation & Quality Branch

The Problem

Nurses 24/7 Supplement

The Government is seeking to ensure that Registered Nurses are available on a 24/7 basis within residential aged care services to enable a higher standard of care to be delivered in these settings.

TO enable services to establish a 24/7 registered nursing presence it is proposed to introduce a new 24/7 Registered Nursing supplement which will be calculated on a daily basis and paid as part of the residential aged care monthly claiming cycle by Services Australia.

Australian Government

Department of Health and Aged Care

24/7 registered nurse requirement details

Requirement

From 1 July 2023 – approved residential aged care services must have a **registered nurse on-site and on duty 24-hours a day, 7 days a week**

Supplement

Residential aged care services with on average up to 60 residents per day over the month – based on **occupied places** – are eligible for a funding supplement to employ extra RNs to deliver 24/7 RN care

Challenges and Risks

1

As payments will be made through the Services Australia systems, inter-agency coordination and integration is required.

2

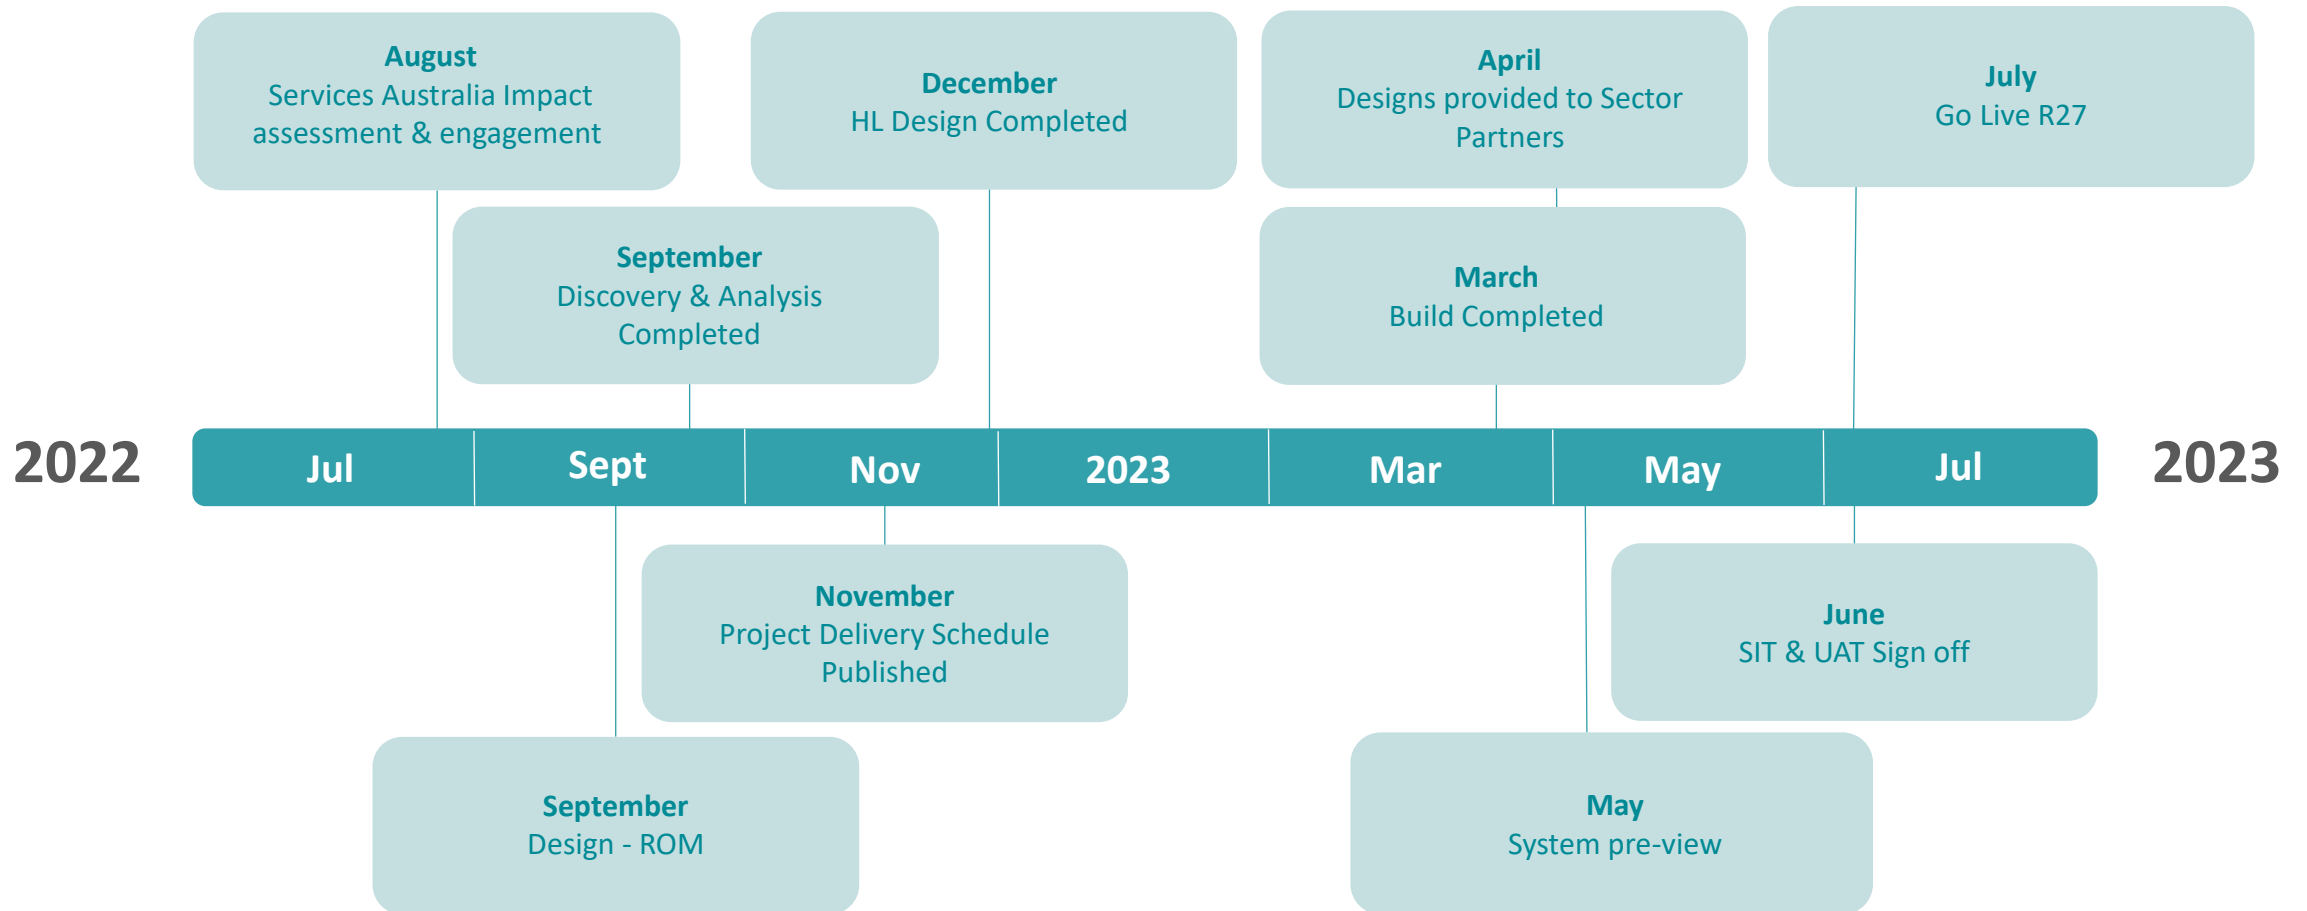

Project will be conducted using internal resources without the use of a major system integrator.

3

Developed using our new salesforce platform.

Timelines & Impact

A group of four diverse people are shown from the chest up, laughing heartily. In the center is a woman with curly brown hair, wearing a white lace top. To her left is a man with glasses and a beard, also laughing. To her right is a man with glasses and a beard, wearing a blue shirt. In the background, a woman with long brown hair is also laughing. The scene is brightly lit, suggesting an indoor setting with large windows.
