Digital Health Blueprint & Action Plan Checklists

When designing, developing and implementing policy initiatives, ensure they align to the following principles and you have:

Person-centred

- Understood consumer and provider needs
- Provided appropriate and accessible education and support materials
- Developed easily navigable, user friendly solutions
- Considered the availability of and access to data
- Explored interactions with provider workflows

Collaborative

- Engaged broadly and meaningfully collaborated with consumers, healthcare providers, government entities and software industry
- Assessed everyone's digital maturity and capability
- Considered the impact of change and adoption on the healthcare workforce and consumer behaviour

Trusted

- Tailored engagement strategies to current public and community sentiment
- Designed systems that support secure, privacy-conscious workflows
- Empowered equitable consumer control of their data
- Utilised national data standards to ensure accurate and consistent meaning

Enduring

- Explored leveraging existing national infrastructure and regulatory frameworks
- Considered how your solution interacts with existing initiatives or services
- Designed with a future-state in mind for a sustainable health system

Accessible

- Considered cultural, linguistic, ability, and geographic barriers (including digital opportunities to reduce these barriers such as remote care)
- Established ways to streamline affordability and accessibility
- Designed solutions that enhance or streamline consumer access to health information
- Offered choice for equitable interactions that best suit individual needs
- Enabled healthcare workers rapid access to essential patient data

When you embed these principles, you are ensuring you:

place the consumer and carer values at the centre of their health and wellbeing

aid everyone in improving disease prevention and enhancing health and wellness

respond to the evolving needs of consumers, healthcare providers, researchers and innovators

support a consumer-centric health system informed by data

support inclusivity, equity and usability by design

support a principles-led approach in the delivery of our vision
