

You have choices for
cervical
screening

Wendy chose to
self-swab at
the clinic

Did you know cervical cancer is preventable?

Early detection through routine screening could save your life.

Women and people with a cervix aged 25-74 should have a **Cervical Screening Test** every 5 years.

Your doctor can do the test, or you can do it yourself using a simple swab.

It's your Cervical Screening Test. **Own It.**

Talk to your doctor next time you're due.
