MRF9500000	Australian Brain Cancer Mission	2018 Enhanced Capacity of the Australian and New Zealand Children's Haematology Oncology Group (ANZCHOG) Program	Monash University	University	VIC	Australian and New Zealand Children's Haematology/Oncology Group	Development and implementation of an Australian Research Agenda that identifies current and upcoming leading international trials of high potential relevance/significance to Australian paediatric brain cancer patients; Increased access to, and participation in, trials for Australian patients and sites in brain cancer clinical trials; Expedited time to start-up in Australia, through support provided and coordinated nationally; Structures and approaches in place to translate findings in practice; Close collaboration and cohesion of effort and activity by national brain cancer research groups and key research groups working in brain cancer and under the Australian Brain Cancer Mission, to maximise impact of effort and investments under the Mission; Working with the Australian Brain Cancer Mission, through Cancer Australia, in its initial analysis of existing brain cancer platforms and technologies, and efforts to expand and coordinate these assets based on the outcomes of the analysis.	Not applicable	Not available	One-off/ad hoc	25/09/2018	28/12/2024	Not available	Not available	$ 3,010,000.00	Prior to 03/09/2024
MRF9500001	Australian Brain Cancer Mission	2018 Enhanced Capacity of the Cooperative Trials Group for Neuro-Oncology (COGNO) Program	University of Sydney	University	NSW	Cooperative Trials Group for Neuro-Oncology	Development and implementation of an Australian Research Agenda that identifies current and upcoming leading international trials of high potential relevance/significance to Australian adult brain cancer patients; Increased access to and participation in trials for Australian patients and sites in brain cancer clinical trials; Expedited time to start-up in Australia, through support provided and coordinated nationally; Structures and approaches in place to translate findings in practice; Close collaboration and cohesion of effort and activity by national brain cancer research groups and key research groups working in brain cancer and under the Australian Brain Cancer Mission, to maximise impact of effort and investments under the Mission; Working with the Australian Brain Cancer Mission in its initial analysis of existing brain cancer platforms and technologies, and efforts to expand and coordinate these assets based on the outcomes of the analysis.	Doctor Kristi Milley	Not available	One-off/ad hoc	28/09/2018	30/06/2025	Not available	Not available	$ 2,500,000.00	Prior to 03/09/2024
MRF9500002	Australian Brain Cancer Mission	2018 Zero Childhood Brain Cancer	University of New South Wales	University	NSW	Zero Childhood Brain Cancer program	The purpose of the Zero Childhood Brain Cancer program is to support research activities which enable the provision of a personalised medicine program to improve outcomes for Australian children with high risk or relapsed brain cancers with the ultimate goal of improving survival outcomes for Australian children with high risk brain cancers.	Professor Michelle Haber	Not available	One-off/ad hoc	27/06/2018	30/06/2025	Not available	Not available	$ 5,002,023.00	Prior to 03/09/2024
MRF9500004	Australian Brain Cancer Mission	2019 Innovative Clinical Trials	University of Sydney	University	NSW	LUMOS (Low & Intermediate Grade Glioma Umbrella Study of Molecular Guided Therapies)	LUMOS (Low & Intermediate Grade Glioma Umbrella Study of Molecular Guided Therapies) is a multi-year innovative precision oncology umbrella research study for patients with relapsed Grade 2 and 3 (G2/3) glioma. These patients have a very poor prognosis, with no established standard of care treatment. Umbrella studies are a new approach whereby patients within one disease group are allocated to different treatments based on a biological rationale. This approach is particularly relevant for the use of targeted agents, in which the presence of the target is required for efficacy.	Associate Professor Hui Gan	Not available	One-off/ad hoc	26/06/2019	30/06/2022	Not available	Not available	$ 502,558.00	Prior to 03/09/2024
MRFBC000016	Australian Brain Cancer Mission	2019 Brain Cancer Survivorship	University of Sydney	University	NSW	Brain cancer Rehabilitation, Assessment, Intervention of survivor Needs	The innovative BRAIN program addresses core targets for brain cancer survivorship through a comprehensive multifaceted approach which recognises the enormous range of impacts of brain cancer for the individual and their carers. Through a systematic approach to screening for distress, symptoms, and needs of patients and caregivers in routine clinical practice we will achieve immediate improvements in our understanding of the frequency and severity of symptoms and need in the population across the country. Knowledge generated will underpin development of improved models of care coordination in this high-need population	Not applicable	Not available	Open competitive	30/06/2020	31/12/2024	Not available	Not available	$ 4,973,026.00	Prior to 03/09/2024
MRFBC000002	Australian Brain Cancer Mission	2019 Brain Cancer Survivorship	University of New South Wales	University	NSW	A new nurse-led intervention to re-engage childhood brain cancer survivors (Engage Brain)	Almost all childhood brain cancer survivors have health problems after they finish cancer treatment. Unfortunately, most Australian survivors are not receiving the care they need to manage these problems. The Grantee has developed the Re-engage program to help childhood brain cancer survivors improve their confidence to manage their health and to improve their quality of life. Reengage offers survivors two telehealth nurse consults and careful case review by an expert team. The nurses create a care package for survivors which includes a summary of their care needs, a letter for their GP, referrals to specialists and education about healthy lifestyles. This trial will test the impact of Re-engage and will help us to roll-out Re-engage across Australia.	Not applicable	Not available	Open competitive	30/06/2020	29/06/2024	Not available	Not available	$ 1,941,576.00	Prior to 03/09/2024
MRF9500003	Australian Brain Cancer Mission	2019 Innovative Clinical Trials	La Trobe University	University	VIC	Prospective, multicentre trial evaluating FET-PET in high grade glioma (FIG Study)	The Prospective, Multicentre Trial Evaluating FET-PET in High Grade Glioma (FIG Study) is a highly innovative, multi-centre Australian research study which will evaluate the role of amino-acid imaging with 18F-FET positron emission tomography (FET PET) in patients with glioblastoma (GBM). This study addresses an area of urgent unmet clinical need in GBM patients, where standard imaging techniques may not be effective in accurately defining tumour volume prior to chemoradiation treatment, and also in accurately assessing true response vs pseudoprogression in patients following initial treatment - both scenarios impacting on clinical management decisions, and patient care.	Professor Andrew Scott	Not available	One-off/ad hoc	27/06/2019	31/12/2025	Not available	Not available	$ 1,246,611.80	Prior to 03/09/2024
MRFBCII000014	Australian Brain Cancer Mission	2020 Brain Cancer Survivorship	University of Melbourne	University	VIC	Responding to need: technology-enhanced brain cancer survivorship	In 2020, 2,000 Australians will be diagnosed with brain cancer. Less than a quarter (22%) will be alive in 5 years. Lack of access to tailored survivorship care, connectivity with the treating team and peers is common, due to centralisation of care in metropolitan hospitals. This research will develop and demonstrate impact of an online survivorship platform, co-produced with brain cancer survivors and carers, to streamline access to treating teams, peer support, and evidence-informed supportive care, in a private and secure environment.	Professor Kate Drummond	Professor Kate Drummond, Doctor James Whittle, Doctor Heidi McAlpine, Professor Mark Rosenthal, Professor Wendy Chapman, Associate Professor Ann Borda, Doctor Daniel Capurro, Professor Mei Krishnasamy, Doctor Verena Schadewaldt, Mr Rana Dhillon, Associate Professor Kathleen Grey	Open competitive	30/06/2021	29/06/2025	Not available	Not available	$ 2,615,278.00	Prior to 03/09/2024
MRF2019448	Australian Brain Cancer Mission	2021 Brain Cancer Research	The Walter and Eliza Hall Institute of Medical Research	Medical Research Institute	VIC	"GLIMMER" - Glioma Liquid biopsy and Multiomic-Monitoring Enabled Research platform	Glioblastoma (GBM) is an aggressive brain cancer with a dismal 5-year survival rate of 5%. Our collaborative research program GLIMMER (Glioma Liquid biopsy and Multi-omic Monitoring Enabled Research platform) will address the lack of effective treatment options with a pipeline of early to late translational science. The impact of this program will improve survival outcomes, quality of life and avoid unnecessary health burdens for this devastating disease.	Doctor James Whittle	Doctor James Whittle, Associate Professor Misty Jenkins, Doctor Saskia Freytag, Doctor Sarah Best, Associate Professor Andrew Morokoff, Doctor David Goode, Doctor Stephen Wong, Professor Sean Grimmond, Professor Stephen Fox, Professor Sarah-Jane Dawson, Doctor Lucy Gately, Professor Katharine Drummond, Professor David Eisenstat, Associate Professor Lucy Palmer	Targeted competitive	1/11/2022	31/12/2028	MEDICAL AND HEALTH SCIENCES, Oncology and carcinogenesis, Molecular targets; MEDICAL AND HEALTH SCIENCES, Immunology, Applied immunology (incl. antibody engineering, xenotransplantation and t-cell therapies); BIOLOGICAL SCIENCES, Genetics, Genomics	Clinical Medicine and Science Research	$ 4,550,471.30	Prior to 03/09/2024
MRF2021078	Australian Brain Cancer Mission	2021 Brain Cancer Research	University of New South Wales	University	NSW	A new targeted combination therapy with matched biomarker to treat intractable glioblastoma	Glioblastoma (GBM) is the most aggressive and fatal of all brain cancers. GBM tumours contain aggressive cells that are able to hide from therapies. These cells express androgen (male hormone) receptors, which provides a new way to target them. Using a unique model of growing patient tumours in the lab, and mice, this study will define whether anti-androgen drugs improve the effect of standard-of-care therapies. This will enable rapid results leading to clinical trials to improve GBM outcomes.	Professor Jeffrey Holst	Professor Jeffrey Holst, Associate Professor Christine Chalfer, Associate Professor Elizabeth Hovey, Associate Professor Eng-Siew Koh, Doctor Sylvia Chung, Doctor Beatriz Perez San Juan, Doctor Rajesh Reddy, Doctor Michael Rodriguez, Doctor Kanu Wahi, Associate Professor Luke Selth, Doctor Rebecca Ormsby, Doctor Grant Buchanan, Doctor Benjamin Quah	Targeted competitive	1/11/2022	30/06/2025	MEDICAL AND HEALTH SCIENCES, Oncology and carcinogenesis, Molecular targets	Basic Science Research	$ 582,686.40	Prior to 03/09/2024
MRF2021878	Australian Brain Cancer Mission	2021 Brain Cancer Research	The Council of the Queensland Institute of Medical Research	Medical Research Institute	QLD	"Off-the-shelf" CAR-T cell immunotherapy for brain cancer	Over the last two decades the overall survival of brain cancer patients have remained largely unchanged. Our group has previously shown that adoptive T cell therapy directed to a common herpesvirus, CMV can be safely used for the treatment of brain cancer patients and this therapy can offer clinical benefit to some patients. In this project we are aiming to assess a novel dual targeting T cell therapy which is specifically designed to target tumour-nourishing cancer stem cells.	Professor Rajiv Khanna	Professor Rajiv Khanna, Doctor Paulo Martins, Associate Professor Corey Smith, Associate Professor David Walker	Targeted competitive	1/11/2022	31/10/2024	MEDICAL AND HEALTH SCIENCES, Immunology, Applied immunology (incl. antibody engineering, xenotransplantation and t-cell therapies)	Clinical Medicine and Science Research	$ 329,489.00	Prior to 03/09/2024
MRF2023943	Australian Brain Cancer Mission	2022 Australian Brain Cancer Research Infrastructure	University of Sydney	University	NSW	Supporting Australian Brain Cancer Research with an integrated network of platforms	To deliver better treatment and care for Australian brain cancer patients we will establish three national, interlinked platforms: an Australian Brain Cancer Registry to reduce unwarranted variation in patient care; a Registry Trials platform to facilitate data-driven trials and patient donation of data and specimens to research; and a Biobanking and Organoid platform to standardise operating procedures and enable collaborative translational research.	Associate Professor Rosalind Jeffree	Associate Professor Rosalind Jeffree, Doctor Adrian Lee, Doctor Alexander Yuile, Professor Andrew Scott, Doctor Anthony Nguyen, Doctor Benjamin Kong, Professor Bryan Day, Doctor Cassie Turner, Professor Claire Vajdic, Doctor Craig Gedye, Ms Danica Cossio, Doctor David Hansen, Associate Professor David Ziegler, Ms Donna Truran, Associate Professor Eng-Siew Koh, Doctor Ganessan Kichenadasse, Mr Gary Francois, Doctor Guillermo Gomez, Doctor Hao-Wen Sim, Professor Hui Gan, Doctor James Whittle, Doctor Jamie Gabriel, Professor Joanne Aitken, Professor Joanne Dickinson, Professor John Simes, Professor John Zalcberg, Professor Jordan Hansford, Professor Katharine Drummond, Doctor Kimberley Alexander, Professor Leonie Quinn, Doctor Lucy Gately, Associate Professor Mark Pinkham, Professor Meera Agar, Associate Professor Michael Buckland, Doctor Mythily Sachchithanantham, Mr Norm Good, Doctor Rebecca Ormsby, Ms Robyn Leonard, Doctor Rosemary Harrup, Doctor Ryan Sullivan, Professor Stuart Pitson, Professor Sue Evans, Professor Terence O'Brien, Doctor Wayne Ng, Doctor Wee Chin, Professor Wendy Lipworth, Associate Professor Winny Varikatt, Associate Professor Zarnie Lwin	Targeted competitive	1/01/2023	30/06/2028	BIOMEDICAL AND CLINICAL SCIENCES, Oncology and carcinogenesis, Oncology and carcinogenesis not elsewhere classified	Clinical Medicine and Science Research	$ 5,991,219.44	Prior to 03/09/2024
ARGCHDG000035	Cardiovascular Health Mission	2019 Accelerated Research - Congenital Heart Disease	Queensland University of Technology	University	QLD	CHD LIFE+ family-centred care models supporting long-term neurodevelopment	This multidisciplinary project will produce actionable intelligence to help health services implement efficient models of care that empower children who receive open heart surgery and their families to access the right assessments and treatments in the right location for their circumstances at the right time for optimal prevention and treatment of neurodevelopmental complications according to contemporary clinical recommendations and child/family circumstances (CHD LIFE+). This will be achieved through mixed methods research incl. complex health service model simulations, implementation science, and co-design processes. This project includes leading academics, clinicians and all Australian services who perform paediatric open heart surgery.	Professor Steven McPhail	Not available	Open competitive	29/06/2020	30/06/2026	Not available	Not available	$ 2,997,256.00	Prior to 03/09/2024
ARGCHDG000041	Cardiovascular Health Mission	2019 Accelerated Research - Congenital Heart Disease	The University of Adelaide	University	SA	Maternal exposures, congenital heart defects, and child development	We shall identify non-genomic factors across gestation that are associated with congenital heart disease (CHD). Using government and other data, we have assembled a cohort comprising all births in South Australia (1986-2015, n=580,000) linked to birth defects reported to age 5 years. Prescription medicines have been added to maternal exposures that are routinely registered. We will identify contributions to CHD from 1) specific maternal health problems and pregnancy complications 2) selected prescription medicines 3) medical interventions to treat infertility. We will assess special needs and educational performance in children with CHDs across their school years. This work will be replicated in a comparable Canadian cohort.	Professor Michael Davies	Not available	Open competitive	26/06/2020	31/12/2024	Not available	Not available	$ 3,037,417.00	Prior to 03/09/2024
ARGCHDG000036	Cardiovascular Health Mission	2019 Accelerated Research - Congenital Heart Disease	The University of Queensland	University	QLD	Gene Expression to Predict Long-Term Outcome in Infants After Heart Surgery	We will identify gene expression patterns predicting patient-centred short- and long-term outcomes in infants undergoing heart surgery. The study is an expansion of our existing large trial of infants under 2 years of age undergoing open heart surgery on cardiopulmonary bypass across all paediatric heart surgery centres in Australia and New Zealand. Using cutting-edge gene expression studies, we will investigate the individual response to cardiopulmonary bypass. A state-of-the-art neuropsychological assessment is performed in all children until school entry age. The aim is to understand and predict the adverse impact of heart surgery on infants with heart disease to improve long term outcomes for children with childhood heart disease.	Associate Professor Luregn Schlapbach	Not available	Open competitive	26/06/2020	31/12/2025	Not available	Not available	$ 3,068,742.00	Prior to 03/09/2024
ARGCHDG000028	Cardiovascular Health Mission	2019 Accelerated Research - Congenital Heart Disease	University of Sydney	University	NSW	An Australian Study of the Outcomes and Burden of Congenital Heart Disease	This national multi-disciplinary project addresses the critical need to improve health outcomes across the Congenital Heart Disease (CHD) life-course. The research program proposes a "two level" approach to generating important and clinically relevant research outcomes; (i) through generating data from 25,000 child and adult cases of CHD from sites across Australia, with linkage to survival and health care utilisation (a National CHD Registry) and (ii) applying comprehensive phenotyping to 2,400 paediatric/adult cases living with CHD that provides the information required to target critical psychological, mental health, neurocognitive and quality of life outcomes in CHD patients and the parents of CHD children.	Professor David Celermajer	Not available	Open competitive	26/06/2020	31/12/2024	Not available	Not available	$ 3,994,175.00	Prior to 03/09/2024
ARGCHDG000016	Cardiovascular Health Mission	2019 Accelerated Research - Congenital Heart Disease	University of Sydney	University	NSW	Congenital Heart Fitness Intervention Trial: CH-FIT	Most Australians who have congenital heart disease (CHD) survive to adulthood but often live with complex medical problems and reduced exercise capacity. Although regular exercise is well-recognised to be of benefit for physical and mental health in many health conditions, research investigating the health impact of exercise and the best way to help adults and children living with CHD to lead active lives is lacking. This project will address that gap with a 12 month exercise training and lifestyle education program designed to improve exercise capacity and quality of life in children and adults living with CHD. This will be largest and most definitive exercise trial ever performed in this population which will inform practice worldwide.	Doctor Rachel Cordina	Not available	Open competitive	26/06/2020	30/06/2025	Not available	Not available	$ 3,328,569.00	Prior to 03/09/2024
ARGCHDG000015	Cardiovascular Health Mission	2019 Accelerated Research - Congenital Heart Disease	University of Sydney	University	NSW	Personalised Pulmonary Valved Conduits: reducing re-operations in CHD	We address the unmet need for a durable, biocompatible right ventricle to pulmonary artery valved tube, used in reconstructive surgery for congenital heart disease. Currently available animal and donated human products fail in just a few years, requiring replacement open heart surgery every 5-10 years. This has patient safety, psychological and financial implications for the individual, family and health system. Our team of doctors, scientists and engineers is bringing together recent developments in polymer science and computational engineering to build a solution tailored to the individual that will allow the tube to 'grow' with the child, maintain good valve function, avoiding reoperation, improving heart function and quality of life.	Professor Fariba Dehghani	Not available	Open competitive	30/06/2020	31/12/2024	Not available	Not available	$ 2,081,761.00	Prior to 03/09/2024
MRFHF000001	Cardiovascular Health Mission	2020 Strategic Research	National Heart Foundation of Australia	Corporation	VIC	2020 Strategic Research Grants	The project will fund innovative research in the four areas of predictive modelling, cardio-oncology, secondary prevention, and women and heart disease.	Not applicable	Not available	One-off/ad hoc	30/06/2020	30/06/2024	Not available	Not available	$ 4,000,000.00	Prior to 03/09/2024
MRFSF000001	Cardiovascular Health Mission	2020 Childhood Stroke	National Stroke Foundation	Corporation	VIC	The Australian Paediatric Acute Code Stroke (PACS) study	The objective of this project is to improve survival outcomes after paediatric stroke, bridging the inequity gap between adults and children in accessing reperfusion therapies through implementation of the Paediatric Acute Code Stroke (PACS) protocol.	Not applicable	Not available	One-off/ad hoc	30/06/2020	30/06/2025	Not available	Not available	$ 4,000,000.00	Prior to 03/09/2024

MRF1201375	Cardiovascular Health Mission	2019 Cardiovascular Health	Monash University	University	VIC	Using Polygenic Risk Scores to Target Statin Therapy in Primary Prevention	Calculation scores by examining multiple genes predict the chance of having a heart attack. It is unknown whether they can guide use of treatments to prevent heart attacks. This clinical trial will determine whether statins, medications commonly used to lower cholesterol, will have a protective effect on the growth of plaques within blood vessels, in patients with different levels of polygenic risk. The findings will help to define how to best use polygenic risk scores in clinical practice.	Professor Stephen Nicholls	Professor Stephen Nicholls, Professor Christopher Semsarian, Associate Professor Dennis Wong, Professor Sophia Zoungas, Associate Professor Jodie Ingles, Doctor Adam Nelson	Targeted competitive	1/06/2020	31/03/2025	MEDICAL AND HEALTH SCIENCES, Cardiorespiratory medicine and haematology, Cardiology (incl. cardiovascular diseases)	Clinical Medicine and Science Research	$ 1,416,095.00	Prior to 03/09/2024
MRF1200206	Cardiovascular Health Mission	2019 Cardiovascular Health	University of Melbourne	University	VIC	A randomised controlled trial of ultra-early, minimally invasive surgery for intracerebral haemorrhage (EVACUATE)	Intracerebral haemorrhage (stroke caused by bleeding in the brain) is a major cause of death and disability and treatment options are limited. Surgery was not effective in past trials but was performed relatively late and used open brain surgery techniques that disrupt surrounding brain tissue. We propose a globally unique randomised controlled trial of minimally invasive surgery within 8 hours of stroke onset with the aim of reducing disability through early effective removal of blood clot.	Professor Bruce Campbell	Professor Bruce Campbell, Professor Timothy Kleinig, Associate Professor John Laidlaw, Associate Professor Amal Abou-Hamden, Professor Leonid Churilov, Professor J Mocco, Associate Professor Christopher Kellner, Doctor Lan Gao, Professor Stephen Davis	Targeted competitive	1/06/2020	31/05/2025	MEDICAL AND HEALTH SCIENCES, Neurosciences, Central nervous system	Clinical Medicine and Science Research	$ 2,138,226.00	Prior to 03/09/2024
MRF1201433	Cardiovascular Health Mission	2019 Cardiovascular Health	University of New South Wales	University	NSW	Novel deep learning methods for large-scale cardiovascular risk screening using Australian digital health data	Through two synergistic studies using routinely collected data and novel deep learning methods, we will deliver: (1) The world's first dynamic cardiovascular risk prediction algorithm that uses clinical text data and longitudinal event sequences; and (2) The world's first mammography-derived cardiovascular risk prediction algorithm.	Professor Louisa Jorm	Professor Louisa Jorm, Doctor Clare Arnott, Doctor Sebastiano Barbieri, Professor Patrick Brennan, Professor Anthony Rodgers, Professor Mark Woodward, Doctor Katrina Poppe, Doctor Ziba Gandomkar, Associate Professor Blanca Gallego Luxan, Professor Kirsty Douglas	Targeted competitive	1/06/2020	31/05/2025	MEDICAL AND HEALTH SCIENCES, Public health and health services, Health information systems (incl. surveillance)	Public Health Research	$ 1,467,090.60	Prior to 03/09/2024
MRF1201384	Cardiovascular Health Mission	2019 Cardiovascular Health	University of New South Wales	University	NSW	Total Cardiac Care - STROKE: A randomised controlled trial of a comprehensive smartphone application-centric model of care to improve outcomes in stroke patients	One in three patients are re-admitted to hospital within 6 months of successful treatment for stroke. We have developed a smartphone-based 'hospital in the home' system that allows patients, GPs and specialists to monitor blood pressure, heart rhythm, activity, and medication use daily. Patients and medical teams are alerted when signs indicate treatment changes are needed. Our study is aimed at proving this system can reduce the number of patients re-admitted to hospital after stroke.	Professor Ken Butcher	Professor Ken Butcher, Doctor Sze-Yuan Ooi, Professor Nigel Lovell, Professor Kim Delbaere, Professor Zhao Yang Dong, Emeritus Professor Branko Celler, Professor Sallie-Anne Pearson, Doctor Thomas Lung, Emeritus Professor Siaw-Teng Liaw, Doctor Jennifer Yu	Targeted competitive	1/06/2020	31/05/2025	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Clinical sciences not elsewhere classified	Clinical Medicine and Science Research	$ 1,629,905.00	Prior to 03/09/2024
MRF1200105	Cardiovascular Health Mission	2019 Cardiovascular Health	University of New South Wales	University	NSW	The SaltSwitch Online Grocery Shopping (OGS) Trial: A Novel Method for Reducing Blood Pressure among Individuals with Hypertension	High blood pressure is a leading cause for heart diseases and stroke in Australia, and reducing salt intake to lower blood pressure is strongly recommended by guidelines. Online grocery shopping is transforming how Australians purchase food and offers an opportunity for nutrition intervention - We propose to test the efficacy and implementation of a scalable online grocery shopping intervention called SaltSwitch to help consumers choose lower salt products and reduce their blood pressure.	Associate Professor Jason Wu	Associate Professor Jason Wu, Professor Bruce Neal, Professor Cliona Ni Mhurchu, Associate Professor Adrian Cameron, Associate Professor Mark Huffman, Doctor Kathy Trieu, Mr Fraser Taylor	Targeted competitive	1/06/2020	31/12/2023	MEDICAL AND HEALTH SCIENCES, Public health and health services, Public health and health services not elsewhere classified	Public Health Research	$ 1,687,990.14	Prior to 03/09/2024
MRF1201196	Cardiovascular Health Mission	2019 Cardiovascular Health	University of Sydney	University	NSW	Colchicine After Stroke to Prevent Event Recurrence (CASPER) Study	Inflammation plays a critical role in the rupture of artery plaques, leading to acute stroke. Despite current best treatments, many people remain at high risk of recurrent stroke events, predominantly because current therapies do not specifically target the inflammatory component of arterial disease. This project investigates the ability of colchicine, a safe and commonly used anti-inflammatory drug, to inhibit vascular disease-associated inflammation, thereby improving clinical outcomes.	Professor Anthony Keech	Professor Anthony Keech, Professor Geoffrey Cloud, Associate Professor Sanjay Patel, Doctor Carlos Garcia Esperon, Professor John Simes, Professor Rachael Morton, Doctor Kristy Robledo, Doctor Andrzej Januszewski, Professor Val Gebski, Professor Lisa Askie	Targeted competitive	1/06/2020	30/03/2025	MEDICAL AND HEALTH SCIENCES, Cardiorespiratory medicine and haematology, Cardiology (incl. cardiovascular diseases)	Clinical Medicine and Science Research	$ 2,997,908.45	Prior to 03/09/2024
MRF2008437	Cardiovascular Health Mission	2020 Cardiovascular Health	Monash University	University	VIC	Statins and Progression of Coronary Atherosclerosis in Melanoma Patients Treated with Immune Checkpoint Inhibitors	Checkpoint inhibitors are used in an increasing number of melanoma patients. Recent data has suggested that checkpoint inhibitor use may associate with both a greater risk of heart attack and stroke, which may relate to greater growth of plaques in blood vessels. In this clinical trial we will compare the effects of statins (drugs commonly used to lower cholesterol) and placebo on plaque growth in melanoma patients treated with checkpoint inhibitors.	Professor Stephen Nicholls	Professor Stephen Nicholls, Professor Eva Segelov, Professor Mark Shackleton, Professor Grant McArthur, Associate Professor Andrew Haydon, Professor Sophia Zoungas, Associate Professor Victoria Mar, Doctor Nitesh Nerlekar, Professor Danny Liew, Doctor Elizabeth Ahern	Targeted competitive	1/06/2021	31/05/2026	MEDICAL AND HEALTH SCIENCES, Cardiorespiratory medicine and haematology, Cardiology (incl. cardiovascular diseases)	Clinical Medicine and Science Research	$ 1,669,300.28	Prior to 03/09/2024
MRF2007317	Cardiovascular Health Mission	2020 Cardiovascular Health	The University of Newcastle	University	NSW	Stroke in patients with large Ischaemic Core: Assessment of Reperfusion therapy Impact on Outcome (SICARIO)	Endovascular thrombectomy (EVT) is validated and in routine clinical use for ischemic stroke patients and provides one of the largest treatment effects in medicine. However, the foundational trials where highly selective, meaning EVT is only offered to a third of stroke patients. We propose a trial of rapid progressors to identify if these patients can still benefit from EVT. The proposed trial will address large knowledge gaps to deliver practice changing data.	Professor Christopher Levi	Professor Christopher Levi, Associate Professor Andrew Bivard, Professor Mark Parsons, Professor Leonid Churilov, Professor Ken Butcher, Professor Marjory Moodie, Associate Professor Elizabeth Holliday, Professor Neil Spratt, Professor Christopher Bladin, Professor Bernard Yan, Doctor Ferdinand Miteff	Targeted competitive	1/06/2021	31/05/2026	MEDICAL AND HEALTH SCIENCES, Cardiorespiratory medicine and haematology, Cardiorespiratory medicine and haematology not elsewhere classified	Clinical Medicine and Science Research	$ 1,515,113.87	Prior to 03/09/2024
MRF2007344	Cardiovascular Health Mission	2020 Cardiovascular Health	University of Sydney	University	NSW	Safety and Tolerability of AZD6482 in Reperfusion for Stroke (STARS)	Stroke is a leading cause of death/disability worldwide. Identification of novel drugs that can improve clot lysis without causing bleeding would represent a major advance in stroke treatment. The Safety and Tolerability of AZD6482 in Reperfusion for Stroke (STARS) study - describes a Phase 2a, dose escalation study evaluating safety/tolerability of a novel anti-clotting drug (AZD6482) with promising preclinical safety/efficacy data, in adults with acute ischaemic stroke.	Professor Shaun Jackson	Professor Shaun Jackson, Doctor Candice Delcourt, Professor Craig Anderson, Associate Professor Gian Luca Di Tanna, Associate Professor Simone Schoenwaelder, Doctor Timothy Ang	Targeted competitive	1/06/2021	31/05/2025	MEDICAL AND HEALTH SCIENCES, Cardiorespiratory medicine and haematology, Cardiology (incl. cardiovascular diseases)	Clinical Medicine and Science Research	$ 2,706,533.13	Prior to 03/09/2024
MRF2009025	Cardiovascular Health Mission	2020 Cardiovascular Health	The University of Adelaide	University	SA	The SPRINTS Project: Stroke - Prevention of Reperfusion Injury and Neuroinflammation - a Therapeutic Strategy	Stroke is a major clinical problem, with the impacts not limited to the acute management phase. Stroke is a leading cause of adult disability and dementia. Such issues are associated with an inflammatory reaction in the brain that follows the restoration of blood flow. Our team are reformulating an existing drug treatment to use to manage the inflammatory reaction in the brain to reduce complications and improve patient outcomes.	Associate Professor Renee Turner	Associate Professor Renee Turner, Professor Henry Ma, Professor Alan Nimmo, Associate Professor Connie Wong, Professor James Bourne, Doctor Nicholas Veldhuis, Professor Jonathan Baell, Professor Michelle McIntosh, Doctor Daniel Poole	Targeted competitive	1/06/2021	31/08/2025	MEDICAL AND HEALTH SCIENCES, Neurosciences, Central nervous system	Basic Science Research	$ 2,563,915.78	Prior to 03/09/2024
MRF2008943	Cardiovascular Health Mission	2020 Cardiovascular Health	University of Sydney	University	NSW	LesioLogic	Heart rhythm disorders are common worldwide, with 240,000 people suffering from atrial fibrillation (AF) alone in Australia and doubling by 2034. Radiofrequency (RF) catheter ablation has become the standard of care but many surgeries fail due to a lack of real-time monitoring. Our team of cardiologists at Westmead Hospital and Biomedical Engineers at University of Sydney have solved this problem by creating LesioLogic, a non-invasive system to visualise cardiac RF ablation in real-time. MRF2017192	Cardiovascular Health Mission	2021 Cardiovascular Health	University of Melbourne	University	VIC	Use of Artificial Intelligence-Guided Echocardiography to Guide Cardiovascular Management in Rural and Remote Australia	Heart failure and valvular heart disease are disproportionate problems in rural and remote Australia (RRA). Echocardiography is the best imaging investigation, and essential for management, but access to this essential test shows huge geographic variations, primarily because of dependence on expert acquisition. This trial seeks to demonstrate the effectiveness of artificial intelligence-based echocardiography for triage and management of patients with known or suspected heart disease in RRA.	Professor Thomas Marwick	Professor Thomas Marwick, Professor Graham Hillis, Doctor Benedict Costello, Doctor Leah Wright, Doctor Quan Huynh, Sudhir Wahi, Doctor Christopher Yu, Angus Baumann, Professor Kazuaki Negishi, Professor Paul Scuffham	Targeted competitive	1/06/2022	31/05/2026	PSYCHOLOGY AND COGNITIVE SCIENCES, Cognitive sciences, Knowledge representation and machine learning; MEDICAL AND HEALTH SCIENCES, Cardiorespiratory medicine and haematology, Cardiology (incl. cardiovascular diseases); MEDICAL AND HEALTH SCIENCES, Cardiorespiratory medicine and haematology, Cardiorespiratory medicine and haematology not elsewhere classified	Clinical Medicine and Science Research	$ 999,996.60	Prior to 03/09/2024
MRF2017654	Cardiovascular Health Mission	2021 Cardiovascular Health	Monash University	University	VIC	Combining Novel Imaging Biomarkers with AI-Accelerated Diagnosis for Equitable Patient Selection To Proactive Treatment With Middle Meningeal Artery Embolisation To Improve Outcomes in cSDH	Chronic subdural haematoma (cSDH) is a disease of the elderly that can cause severe disability and death due to brain compression. This project focuses on using new imaging biomarkers + AI-technology to enable equitable selection of patients to a pro-active, minimally invasive treatment called "middle meningeal artery embolisation" to stop hematoma growth. The main impact of our research outcomes are: fewer patients who need surgery and fewer patients with disability.	Professor Roland Bammer	Professor Roland Bammer, Professor Katharine Drummond, Associate Professor Tony Goldschlager, Professor Wen Lim, Associate Professor Ronil Chandra, Doctor Shalini Amukotuwa, Professor Vincent Thijs	Targeted competitive	1/06/2022	31/12/2025	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Radiology and organ imaging	Clinical Medicine and Science Research	$ 999,865.70	Prior to 03/09/2024
MRF2015950	Cardiovascular Health Mission	2021 Cardiovascular Health	Flinders University	University	SA	Impact of non-invasive coronary angiography on suspected acute coronary syndromes with low concentration troponin elevation	Increased sensitivity of modern troponin assays, which are used to detect cardiac injury, has led to identification of a new cohort with low level troponin elevations. Amongst this cohort, where the risk of a blockage in coronary vessels which requires treatment is lower, traditional investigative approaches such as invasive coronary angiography may not be of benefit. CT coronary angiography may be a less invasive, equally safe alternative imaging approach for this large newly identified cohort. MRF1171426	Clinical Trials Activity	2018 International Clinical Trial Collaborations (Round 18.1)	The George Institute for Global Health	Medical Research Institute	NSW	The SAHaRA Trial: Understanding the best red cell transfusion practice in patients with intracranial bleeding from a ruptured aneurysm	Aneurysmal subarachnoid haemorrhage (aSAH) is the result of a burst artery in the brain. It affects young people (40-60 years), nearly half of whom will die, and a third will have permanent disability. Managing these patients is challenging because the recovering brain is very sensitive and at great risk of further injury (like new strokes) from a lack of blood flow. This study will provide the answer to this common and important question. It will help doctors better manage patients with aSAH.	Associate Professor Anthony Delaney	Associate Professor Anthony Delaney, Associate Professor Shane English, Professor Simon Finfer, Professor John Myburgh, Doctor Nazih Assaad, Associate Professor Lauralyn McIntyre, Professor Dean Fergusson, Doctor Judith Bellapart, Ms Emily Fitzgerald, Doctor Christopher Andersen	Restricted competitive	1/04/2019	31/03/2025	MEDICAL AND HEALTH SCIENCES, Cardiorespiratory medicine and haematology, Cardiorespiratory medicine and haematology not elsewhere classified	Clinical Medicine and Science Research	$ 902,752.20	Prior to 03/09/2024
MRF1170844	Clinical Trials Activity	2018 International Clinical Trial Collaborations (Round 18.1)	University of Western Australia	University	WA	The Early valve replacement in severe ASYmptomatic aortic stenosis (EASY AS) trial	Severe narrowing of the aortic heart valve (aortic stenosis; AS) is a very common condition. If AS is causing problems then the valve needs to be replaced. Most people with AS do not, however, have any symptoms. Traditionally these patients with severe but asymptomatic AS are followed up carefully and only have surgery if they become unwell. It is not clear, however, whether it would be better to replace the valve earlier. This large clinical trial will test which is the best approach. MRF1152454	Clinical Trials Activity	2017 Lifting Clinical Trials and Registries Capacity	Monash University	University	VIC	A collaborative study of the Interfant network (Australian sites): the feasibility, safety and efficacy of the addition of Blinatumomab to the Interfant-06 backbone in infants with MLL-rearranged Acute Lymphoblastic Leukaemia (The Blin-fant Study)	Infants (<1 year of age) diagnosed with acute lymphoblastic leukaemia (ALL) is rare but devastating. Most have a distinct genetic change which makes them even more likely to die from their disease. This international study will examine if a novel drug, blinatumomab, can be safely added to the standard chemotherapy used to treat infants with ALL, and if it is better than chemotherapy alone. The results from this study will be used to develop the first worldwide trial for infant ALL.	Doctor Rishi Kotecha	Associate Professor Rishi Kotecha, Doctor Luciano Dalla-Pozza, Associate Professor Andrew Moore, Doctor Seong Lin Khaw, Associate Professor Rosemary Sutton, Doctor Inge van der Sluis	Restricted competitive	13/06/2018	31/12/2023	MEDICAL AND HEALTH SCIENCES, Oncology and carcinogenesis, Cancer therapy (excl. chemotherapy and radiation therapy)	Clinical Medicine and Science Research	$ 314,771.57	Prior to 03/09/2024

MRF1152313	Clinical Trials Activity	2017 Lifting Clinical Trials and Registries Capacity	Monash University	University	VIC	A registry-linked national platform trial to improve precision-based outcomes using novel therapies in acute myeloid leukaemia (AML)	Acute myeloid leukaemia (AML) is a rare disease, affecting 4.1/100,000 in the population. It is also a lethal blood cancer, with 5-year overall survival only 24.5%. Despite intensive chemotherapy relapse risk is high. Using next-generation sequencing (NGS) and droplet digital PCR (ddPCR), it is now possible to identify and track clonal variants in almost all patients. This proposal will create an integrated national clinical trial program in AML focused on precision diagnosis, treatment and monitoring. This will be achieved by establishing a network of laboratories to perform NGS-based risk stratification and minimal residual disease (MRD) tracking within the Australasian Leukaemia and Lymphoma Group framework. Using this established trials group, we propose to develop an adaptive 3-stage platform study to enable discovery of novel target directed therapies. A Master Protocol will randomise patients in first remission to multiple investigational agents, compared to a control arm. The study will be perpetual, with promising arms graduating to larger efficacy studies and ineffectual arms replaced with new agents. Serial MRD quantitation of clonal disease by RT-qPCR and digital PCR will be used in stage 1 to identify promising drugs, relative to observation. In the second stage, promising arms will be adaptively expanded to estimate leukaemia-free survival. Arms showing sufficient promise in phase 2 will be expanded seamlessly to stage 3, to validate the effect on overall survival. The BCL-2 inhibitor venetoclax has shown great promise in elderly patients with AML in combination with low-dose cytarabine. We hypothesize that targeting BCL-2 will suppress MRD and prolong survival of AML patients with diverse genomic profiles. The outcomes from this proposal include a world first maintenance platform trial in AML and the first examination of the effectiveness of targeting BCL-2 to eliminate MRD linked to an enduring framework to efficiently screen novel drugs. MRF1167847	Clinical Trials Activity	2018 Rare Cancers, Rare Diseases and Unmet Need - Low Survival Cancers and Diseases	La Trobe University	University	VIC	A Basket Study of Low Survival Cancers Treated with EGFR-ADCs	Monoclonal antibodies against Epidermal Growth Factor Receptor (EGFR) are proven treatments in some tumours, although there are a lack of biomarkers and toxicity is nearly universal due to concomitant normal tissue targeting. CI Gan and Scott have pioneered the development of a tumour-specific anti-EGFR antibody, called mAbB06 then ABT-806, which has no normal tissue binding. This tumour specificity has allowed it to be used as the backbone for a tumour-specific anti-EGFR antibody drug conjugate (ADC) called ABT-414. This biomarker-driven basket study will target a group of low survival cancers which are EGFR dysregulated (amplified, mutated or autonomous activated through inappropriate autocrine loops) and likely to benefit from ABBV-321 treatment, and which are not part of the Pharma-sponsored ABBV-321 Phase I program. All cancers with a 5-year survival of less than 50% which show EGFR dysregulation will be eligible. Nine tumour types with low survival will be recruited including anus, gallbladder, stomach, liver, oesophagus, pancreas, lung, mesothelium and triple negative breast cancer. Selecting sites in multiple Australian capital cities will provide maximal patient access. Exploratory endpoints will include exploratory tissue and biomarkers of efficacy and resistance. A sub-study looking at imaging will be undertaken at selected participating sites.	Professor Hui Gan	Professor Hui Gan, Professor Andrew Scott, Professor Anna Nowak, Associate Professor Eliza Hawkes, Professor Niall Tebbutt, Associate Professor Thomas John, Associate Professor Jayesh Desai, Doctor Belinda Yeo, Associate Professor Zarnie Lwin, Professor Leonid Churilov	Restricted competitive	28/03/2019	31/12/2024	MEDICAL AND HEALTH SCIENCES, Oncology and carcinogenesis, Cancer therapy (excl. chemotherapy and radiation therapy)	Clinical Medicine and Science Research	$ 1,658,626.31	Prior to 03/09/2024
MRF1167706	Clinical Trials Activity	2018 Rare Cancers, Rare Diseases and Unmet Need - Low Survival Cancers and Diseases	Monash University	University	VIC	Brain Oxygen Neuromonitoring in Australia And New Zealand Assessment (BONANZA) Trial	Severe traumatic brain injury (TBI) is a disease with high morbidity and mortality, up to 50% of severe TBI victims have died by 6 months post-injury. This is significantly higher than the observed mortality in any other trauma cohorts, or critical illness syndromes. TBI also disproportionately affects Indigenous Australians, with hospitalisation rates due to head injury 21 times that of non-Indigenous peoples. The goal of the project is to improve survival post severe TBI and reduce long-term healthcare costs (currently $5B AUD per annum), by conducting an international, multicentre, randomised controlled trial of an innovative precision-medicine neuro-intensive care management protocol. This clinical trial will involve collaboration with NIH-funded US investigators. The involvement of Australian participants is essential to ensure the trial is adequately powered to assess mortality.	Professor Andrew Udy	Professor Andrew Udy, Professor David Cooper, Professor Alistair Nichol, Professor Jeffrey Rosenfeld, Professor David Menon, Professor Michael Bailey, Professor Katharine Drummond, Doctor Alisa Higgins	Restricted competitive	3/01/2019	30/11/2025	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Intensive care	Clinical Medicine and Science Research	$ 1,084,852.43	Prior to 03/09/2024
MRF1167855	Clinical Trials Activity	2018 Rare Cancers, Rare Diseases and Unmet Need - Low Survival Cancers and Diseases	Monash University	University	VIC	Frailty-stratified randomised controlled bayesian adaptive trial of bortezomib versus lenalidomide in transplant-ineligible myeloma - the FRAIL-M study	Multiple myeloma (MM) is a low survival cancer, and is a heterogeneous, debilitating and incurable haematological cancer with a relative 5 year survival of 48.5% among newly diagnosed patients, the 14th worst 5 year relative survival out of 34 cancers. The population being studied in the FRAIL-M study are older patients with MM who have worse outcomes, with 5 year survival in those 65 year or older only 27% compared with 56% if less than 65 years. However, survival of MM patients is likely worse than reported due to misclassification of the precursor condition monoclonal gammopathy of uncertain significance (MGUS) as MM. The erroneous inclusion of MGUS patients may artificially bolster survival statistics for MM. The project will conduct a stratified randomised controlled trial to identify which competing treatment options are more appropriate in transplant-ineligible myeloma patients according to frailty status. It will enrol transplant-ineligible myeloma patients and stratify them into three groups (fit, intermediate-fit or frail) based on a standardised and validated frailty assessment. Each stratum will be randomised to a bortezomib-based vs a lenalidomide-based regimen, with dosing adjusted according to frailty stratum. The co-primary endpoints are achievement of an overall response after four cycles of treatment and incidence of dose-limiting toxicity. Key secondary endpoints will include event-free survival, overall survival, infection and patient-reported outcome measure at baseline and following treatment. In each arm a Bayesian Optimal Phase II design will be used to jointly monitor efficacy and toxicity, and further adjust the dose or close individual treatment arms if they appear either too toxic or ineffective.	Professor Andrew Spencer	Professor Andrew Spencer, Associate Professor Zoe McQuilten, Professor Hang Quach, Associate Professor Peter Mollee, Professor Erica Wood, Associate Professor John Reynolds, Professor Ruth Hubbard, Associate Professor Richard De Abreu Lourenco	Restricted competitive	3/01/2019	30/09/2025	MEDICAL AND HEALTH SCIENCES, Oncology and carcinogenesis, Haematological tumours	Clinical Medicine and Science Research	$ 1,682,835.68	Prior to 03/09/2024
MRF1167719	Clinical Trials Activity	2018 Rare Cancers, Rare Diseases and Unmet Need - Low Survival Cancers and Diseases	Monash University	University	VIC	Improving survival in myelofibrosis	Myelofibrosis (MF) is a rare incurable blood cancer. It can develop from a pre-existing myeloproliferative disorder. Patients with high risk MF have a median survival of less than 3 years and some less than 5 years. Moreover, the quality of life for patients is poor with a high symptom burden and frequent hospital admissions for blood transfusions and management of infections. About 50% of patients with MF carry the identical mutation in JAK2 (i.e. V617F) which drives the disease. Most of the other 50% carry mutations in other components of cytokine signalling pathways that activate JAK2. The JAK1/2 inhibitor, ruxolitinib, is available in Australia on the PBS for treatment of high risk and Int-2 MF based primarily on two large phase 3 placebo controlled trials. Most patients show initial clinical improvement but then slowly progress. There are no effective alternative drugs currently available in Australia. The molecular genetics of MF and MPNs has advanced greatly in the past 5 years. Many second mutations which adversely influence the risk of progression to acute leukaemia and impact on long term survival are now known. These mutations are mostly in epi-genetic regulators. Genetic profiling of patients is becoming increasingly important for accurate prognosis and for personalized treatment options. This grant will build a registry-linked national platform trial to improve precision-based outcomes, based on low cost genomic profiling, for patients with MF and using novel therapies.	Professor Andrew Perkins	Professor Andrew Perkins, Associate Professor David Ross, Associate Professor Steven Lane, Doctor Cecily Forsyth, Professor Andrew Wei, Professor David Curtis, Associate Professor Jake Shortt, Professor Wendy Erber, Associate Professor William Stevenson	Restricted competitive	3/01/2019	31/12/2023	MEDICAL AND HEALTH SCIENCES, Cardiorespiratory medicine and haematology, Haematology	Clinical Medicine and Science Research	$ 1,733,327.17	Prior to 03/09/2024
MRF1167738	Clinical Trials Activity	2018 Rare Cancers, Rare Diseases and Unmet Need - Low Survival Cancers and Diseases	University of Melbourne	University	VIC	Combination of Avelumab with Peptide Receptor Radionuclide Therapy (PRRT) or Conventional Fractionated Radiotherapy (RT) in Metastatic Merkel Cell Carcinoma (MCC)	Merkel cell carcinoma (MCC) is a rare and highly aggressive neuroendocrine tumour of the skin affecting 300 Australians each year, and the 5-year survival rate is 18%. MCC is highly responsive to radiotherapy (RT) and radiation has been shown to enhance the anti-tumour effects of immunotherapy. Seventy percent of MCCs express somatostatin receptors (SSTR), and are potential candidates for peptide receptor radionuclide therapy (PRRT) such as 177Lu-DOTATATE that uses a SSTR-targeting peptide to deliver a payload of radiation to sites of disease expressing SSTR. The GoTHAM trial is an adaptive, biomarker-driven, signal-seeking, three-arm clinical trial designed to develop the novel combination of avelumab, with either 177Lu-DOTATATE or RT in mMCC depending on the expression of SSTR as defined by 68GaTate-PET scans. The project will develop the first ever anti-PD-L1 – PRRT / RT combination for mMCC as well as provide new insights into predictors of response and drug resistance via the embedded translational studies.	Doctor Shahneen Sandhu	Associate Professor Shahneen Sandhu, Associate Professor Richard Tothill, Professor Richard Scolyer, Associate Professor Alexander Guminski, Professor Jurgen Becker, Professor Michael Poulsen, Associate Professor Victoria Atkinson, Associate Professor Paul Neeson, Professor Mark Shackleton, Associate Professor David Pattison	Restricted competitive	16/01/2019	15/05/2025	MEDICAL AND HEALTH SCIENCES, Oncology and carcinogenesis, Cancer therapy (excl. chemotherapy and radiation therapy)	Clinical Medicine and Science Research	$ 1,812,005.42	Prior to 03/09/2024

MRF1167655	Clinical Trials Activity	2018 Rare Cancers, Rare Diseases and Unmet Need - Low Survival Cancers and Diseases	University of Sydney	University	NSW	mFOLFIRINOX and STEreotactic body radiotherapy (SBRT) for pancreatic cancer with high-risk and Locally AdvaNced disease (MASTERPLAN): a multicentre, randomised phase II study of the Australian Gastrointestinal Trials Group (AGITG)	In recognition of the need to redress the low survival of pancreatic cancer (PC) which has a five year overall survival rate of 8%, international consensus guidelines recommend clinical trials that explore new treatment paradigms including stereotactic body radiotherapy (SBRT). SBRT is a highly innovative treatment that utilises significant technological advances in radiotherapy treatment to enable safe radiotherapy dose escalation, increased tumour cell death and the potential to reduce LRR rates. SBRT has demonstrated encouraging outcomes, including high margin-negative resection rates and LRR rates less than 30%, without increasing postoperative complication rates. This study evaluates whether SBRT in addition to modern chemotherapy is superior to the current standard of chemotherapy alone. The primary endpoint of MASTERPLAN is the 12 month LRR rate. This study is a comprehensive multidisciplinary collaboration of leading pancreatic scientists and clinicians around the country in the context of a randomised phase II trial addressing a cancer with extremely low survival. MRF2006108	Clinical Trials Activity	2020 Rare Cancers, Rare Diseases and Unmet Need - General	La Trobe University	University	VIC	Employing rational novel agent combination therapy to improve transplant cure rates for relapsed/refractory Hodgkin Lymphoma	Hodgkin Lymphoma (HL) is a rare malignancy, with 500 new cases annually in young Australians. While 70% of patients are cured with front line treatment, 30% of patients require second line therapy which often fails resulting in death. Immunotherapy and targeted therapies have dramatically improved survival in haematological malignancies. This study will combine two agents currently approved in recurrent HL the second line setting, earlier to maximise survival of these young Australians.	Associate Professor Eliza Hawkes	Associate Professor Eliza Hawkes, Professor Judith Trotman, Professor Kerry Savage, Doctor Colm Keane, Associate Professor Sze Ting Lee, John Kuruvilla, Associate Professor Tara Cochrane, Professor Chan Yoon Cheah, Doctor Gareth Gregory, Doctor Anna Johnston	Targeted competitive	1/06/2021	31/05/2027	MEDICAL AND HEALTH SCIENCES, Oncology and carcinogenesis, Haematological tumours	Clinical Medicine and Science Research	$ 1,225,487.40	Prior to 03/09/2024
MRF2006649	Clinical Trials Activity	2020 Rare Cancers, Rare Diseases and Unmet Need - General	The University of Queensland	University	QLD	Testing a sinonasal microbiome transplant as a therapy for Chronic Rhinosinusitis by randomised controlled trial	Chronic sinus infections place a significant burden on quality of life. Recently our team undertook a promising study treating 25 chronic sinus patients with a nasal rinse containing nasal secretions from healthy donors. The patients' sinus symptoms decreased significantly after treatment; their symptom scores went from 57 out of 110 to 35 out of 110, a statistically significant improvement. This project will test the nasal secretion treatment more rigorously comparing it to a placebo.	Doctor Diane Maresco-Pennisi	Doctor Diane Maresco-Pennisi, Professor David Paterson, Professor Flavia Huygens, Doctor Joanne Rimmer	Targeted competitive	1/06/2021	31/05/2026	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Infectious diseases	Clinical Medicine and Science Research	$ 707,954.00	Prior to 03/09/2024
MRF2007212	Clinical Trials Activity	2020 International Clinical Trial Collaborations (Round 20.2)	Macquarie University	University	NSW	Determining the impact of a new primary care model for low back pain: A cluster randomised trial	The study will determine the effectiveness of integrating a musculoskeletal clinician (physiotherapist or chiropractor) within general practitioner's (GPs) clinics for patients with low back pain. The study will evaluate the effect of this new approach on patient health, health system, and societal outcomes. The results will inform decision-makers about whether physiotherapists or chiropractors should be integrated within GPs' clinics more widely.	Professor Simon French	Professor Simon French, Professor Mark Hancock, Professor Nicholas Zwar, Associate Professor Jordan Miller, Associate Professor Monica Taljaard, Doctor Petra Graham, Professor Terrence Haines, Professor Fiona Blyth, Doctor Katie de Luca	Targeted competitive	1/06/2021	30/06/2027	MEDICAL AND HEALTH SCIENCES, Public health and health services, Primary health care	Health Services Research	$ 2,107,805.90	Prior to 03/09/2024
MRF2008328	Clinical Trials Activity	2020 International Clinical Trial Collaborations (Round 20.2)	University of Melbourne	University	VIC	The C*STEROID Trial: An international, randomised placebo-controlled trial to determine the effect of antenatal corticosteroids on newborn health when given prior to planned caesarean section birth from 35+0 to 39+6 weeks of pregnancy	Babies born by caesarean section (CS) have an increased risk of breathing problems. Antenatal corticosteroids (ACS) before preterm birth reduce the risk of breathing problems. There is limited research to determine whether ACS before planned CS are beneficial. There are also some concerns that they may cause harm by lowering the blood sugar levels in babies. The C*STEROID Trial will assess the effects of ACS prior to planned CS at or near term to determine if this treatment is safe and effective. MRF2014615	Clinical Trials Activity	2021 Innovative Therapies for Mental Illness	University of Sydney	University	NSW	A randomised, double-blind, controlled trial of MDMA-assisted exposure therapy for comorbid alcohol use disorder and post-traumatic stress disorder	There is a high rate of comorbidity between alcohol use disorders and post traumatic stress disorder which is associated with greater clinical impairment, poorer prognosis and greater treatment attrition. This trial will be an internationally unique study which will examine the efficacy of MDMA-assisted therapy to treat concurrent alcohol use disorder and post traumatic stress disorder. This study will generate high level efficacy and cost-efficacy data for these life-threatening problems.	Associate Professor Kirsten Morley	Associate Professor Kirsten Morley, Professor Katherine Mills, Professor Paul Haber, Professor Daniel Lubman, Professor Maree Teesson, Doctor Shalini Arunogiri, Professor Andrew Baillie, Doctor Yong Yi Lee, Doctor Alyssa Morse, Professor Sudie Back	Targeted competitive	1/01/2022	31/12/2026	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Psychiatry (incl. psychotherapy)	Clinical Medicine and Science Research	$ 1,951,246.45	Prior to 03/09/2024
MRF2014783	Clinical Trials Activity	2021 Innovative Therapies for Mental Illness	University of Sydney	University	NSW	PANOREXIA: A clinical trial of psilocybin-assisted psychotherapy in anorexia nervosa	Anorexia nervosa is a deadly eating disorder that is often resistant to treatment. Psilocybin is a psychedelic drug, found in mushrooms, that has shown to be effective in a range of mental illnesses, especially depression and anxiety, which very commonly co-occur with anorexia nervosa. There is emerging evidence that psychedelics may improve the mental wellbeing of individuals with this illness. This study will investigate 3 doses of psilocybin assisted therapy in adults with anorexia nervosa.	Professor Stephen Touyz	Professor Stephen Touyz, Associate Professor Sloane Madden, Professor Iain McGregor, Doctor Sarah Maguire, Professor David Nutt, Meg Spriggs, Doctor Samuel Banister	Targeted competitive	1/02/2022	31/12/2026	MEDICAL AND HEALTH SCIENCES, Pharmacology and pharmaceutical sciences, Clinical pharmacology and therapeutics	Clinical Medicine and Science Research	$ 1,175,522.20	Prior to 03/09/2024
MRF2010957	Clinical Trials Activity	2021 Innovative Therapies for Mental Illness	University of Melbourne	University	VIC	A Randomised Controlled Trial of MDMA-Assisted Psychotherapy for Treatment-Resistant Social Anxiety in Young Adults with Autism Spectrum Disorder	Social anxiety is common in young adults with autism. It compounds the core symptoms of autism, contributing to disability and distress. Current treatments are often ineffective. MDMA-assisted psychotherapy is a novel treatment shown to be safe and possibly effective in a pilot study. We propose a clinical trial of MDMA-assisted psychotherapy for treatment-resistant social anxiety in young adults with autism. Results may provide an efficacious new treatment option for this disabling condition.	Associate Professor Gill Bedi	Associate Professor Gill Bedi, Professor Adam Guastella, Professor David Coghill, Professor Stephen Wood, Professor Patrick McGorry, Professor Andrew Chanen, Professor Ian Hickie, Doctor Hok Pan Yuen, Doctor Kelsie Boulton, Mr Alexandre Guerin	Targeted competitive	1/01/2022	31/12/2026	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Psychiatry (incl. psychotherapy)	Clinical Medicine and Science Research	$ 3,762,327.90	Prior to 03/09/2024
MRF2014381	Clinical Trials Activity	2021 Innovative Therapies for Mental Illness	Australian National University	University	ACT	Evaluating the efficacy of psilocybin-assisted psychotherapy in treatment resistant depression	Psychedelic assisted psychotherapy using psilocybin, has been investigated in several small studies for its capacity to aid in the recovery of patients with depression. This form of treatment appears to have antidepressant benefits but there are considerable limitations with the studies that have been conducted today date. We aim to conduct a substantive study evaluating the use of this treatment in patients with depression who have failed to respond to other antidepressant medications.	Professor Paul Fitzgerald	Professor Paul Fitzgerald, Professor Kate Hoy, Professor Jayashri Kulkarni, Professor Michael Berk, Doctor Neil Bailey, Professor Stephane Heritier, Doctor Jeggan Tiego, Professor Nicholas Glozier	Targeted competitive	1/01/2022	31/07/2027	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Psychiatry (incl. psychotherapy)	Clinical Medicine and Science Research	$ 2,727,173.50	Prior to 03/09/2024
MRF2014252	Clinical Trials Activity	2021 Innovative Therapies for Mental Illness	University of Melbourne	University	VIC	Clinical Trial of Cannabidiol for Treatment Resistant Anxiety Disorders in Youth	Anxiety disorders are the most common psychiatric conditions in youth. With current treatments only around 50% of young people remit from their anxiety disorders. Cannabidiol (CBD) is the major non-intoxicating constituent of cannabis; it has anxiolytic properties and excellent tolerability and safety as demonstrated by our successful pilot study. We now aim to test whether CBD can reduce anxiety severity in youth who did not respond to standard treatments in a larger placebo-controlled study.	Professor G. Paul Amminger	Professor G. Paul Amminger, Associate Professor Ashleigh Lin, Associate Professor Simon Rice, Professor C. Barnaby Nelson, Professor Alison Yung, Doctor Maximus Berger, Doctor Magenta Simmons	Targeted competitive	1/01/2022	30/06/2025	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Psychiatry (incl. psychotherapy)	Clinical Medicine and Science Research	$ 1,745,708.55	Prior to 03/09/2024
MRF2014599	Clinical Trials Activity	2021 Innovative Therapies for Mental Illness	Swinburne University of Technology	University	VIC	Dimethyltryptamine (DMT)-Assisted Psychological Therapy for Treatment-Resistant Major Depression, Alcohol Use Disorder, and Dual Diagnosis	Alcohol use disorder (AUD) and major depressive disorder (MDD) are disorders which commonly occur together, being associated with immense psychosocial impact. A potential novel treatment involves the use of the psychedelic formulation of the compound Dimethyltryptamine (known as 'DMT'). Research has revealed that DMT may alleviate depression, also having anti-addictive effects. We propose to conduct a clinical trial using DMT for adults with AUD and/or MDD.	Professor Jerome Sarris	Professor Jerome Sarris, Associate Professor Yvonne Bonomo, Doctor Daniel Perkins, Doctor James Rucker, Professor Allan Young, Professor Daniel Hoyer, Doctor Margaret Ross, Doctor Carolyn Ee, Doctor Simon Ruffell, Professor Andrew Lawrence	Targeted competitive	1/01/2022	31/12/2026	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Psychiatry (incl. psychotherapy)	Clinical Medicine and Science Research	$ 1,977,354.90	Prior to 03/09/2024
MRF2012410	Clinical Trials Activity	2021 Innovative Therapies for Mental Illness	University of Melbourne	University	VIC	Psilocybin-assisted therapy for refractory Functional Neurological Disorder	Functional Neurological Disorder (FND) is a mental disorder that presents with neurological symptoms, such as paralysis, which are of psychological origin. Many patients do not respond to standard therapy, and potentially face lifelong disability as a result. We believe that adding psilocybin to standard therapy will allow them to recover completely. We will test this using a randomised controlled trial of psilocybin plus standard therapy compared to placebo plus standard therapy. MRF2015049	Clinical Trials Activity	2021 Rare Cancers, Rare Diseases and Unmet Need	Murdoch Children's Research Institute	Medical Research Institute	VIC	Is oral antibiotic treatment alone non-inferior to standard care for children with bone and joint infections?	Bone and joint infections are common in children and can lead to severe disability. Usually these infections are treated with antibiotics given through the child's vein for a few days followed by antibiotics given by mouth. This research will find out if giving antibiotics just by mouth works as well as the current treatment. If it does, it would prevent the risks of giving antibiotics through the vein and, importantly, allow children to have all their treatment at home. MRF2031156	Clinical Trials Activity	2022 Clinical Trials Activity	Bond University Limited	University	QLD	Evidence-based Antimicrobial Stewardship: Sustainable Implementation in Primary Care - The EASSI-PC Trial	Primary care has the greatest volume of inappropriate antibiotic overuse, representing a significant avoidable cause of antimicrobial resistance. Our team has conducted multiple primary studies and systematic reviews of interventions that reduce inappropriate primary care prescribing (e.g. audit and feedback, delayed prescribing and shared decision making). General practice (GP) uptake of these interventions is suboptimal, and research is needed to determine better strategies for increasing awareness and their implementation among GPs. We will focus on reducing antibiotic use for acute self-limiting conditions commonly managed in primary care: sore throat, cough, sinusitis and "colds". Without a national primary care antibiotic stewardship strategy and the increasing danger posed by antibiotic resistance, promoting the judicious use of antibiotics and reducing their prescription in primary care is a viable approach to safely reducing antibiotic resistance. We will conduct a multifaceted national implementation study in Primary Care. Using current evidence on effective strategies to reduce inappropriate prescribing, we will co-design a final package of these with primary care partners. The participants will be stakeholder groups at each practice (practice managers, nurses, and GPs) along with end-user consumers. The interventions will target two stages: (i) a "priming" intervention aimed at improving the motivation of GPs who are not currently interested, and (ii) a "reduction" intervention to help GPs achieve a stepwise reduction in inappropriate antibiotic prescribing. For each stage, theory-based implementation interventions will be designed to address the discriminant beliefs and behaviours that lead to the inappropriate prescribing of antibiotics, using existing empirically developed and evaluated resources. Two outcome measures will be assessed: (i) the uptake of interventions and (ii) changes in antibiotic use (dispensing and prescribing). MRF2036019	Clinical Trials Activity	2023 Clinical Trials Activity	University of New South Wales	University	NSW	FludrocortisoNE in Septic Shock Evaluation: The FINESSE adaptive randomised clinical trial	Sepsis is a major global public health problem. We propose to conduct a blinded, multi-center, adaptive randomized clinical trial comparing hydrocortisone alone versus hydrocortisone plus fludrocortisone in patients with septic shock to determine if there are any differences on survival and functional recovery in patients with septic shock.	Associate Professor Naomi Hammond	Associate Professor Naomi Hammond, Mr Matthew Ames, Professor Laurent Billot, Professor Louise Burrell, Associate Professor Anthony Delaney, Doctor Kerina Denny, Professor Simon Finfer, Doctor Amy Freeman-Sanderson, Doctor Serena Knowles, Professor John Myburgh, Professor Sandra Peake, Doctor Sarah Sasson, Doctor Colman Taylor, Doctor Kelly Thompson, Professor Bala Venkatesh	Targeted competitive	1/04/2025	30/09/2030	Pending	Pending	$ 4,999,930.12	
MRF2036185	Clinical Trials Activity	2023 Clinical Trials Activity	Monash University	University	VIC	Implementation Research to Improve Outcomes in Primary Spontaneous Pneumothorax: iIMPROVE PSP	Recent high-level evidence and guidelines recommend conservative management for patients with a collapsed lung. Conservative management or watchful waiting results in similar recovery with less side effects, recurrence and patient outcomes (less time off work) compared to putting in a chest tube. We know however that clinicians take up to 17 years to change their practice. Our research will drive the national uptake of this new treatment using implementation science and consumer co-design.	Professor Diana Egerton-Warburton	Professor Diana Egerton-Warburton, Doctor Arash Badiei, Associate Professor Timothy Baker, Professor Simon Brown, Professor Peter Cameron, Professor Simon Craig, Associate Professor Joanne Enticott, Associate Professor Carolyn Hullick, Professor Gerben Keijzers, Associate Professor Benjamin Kwan, Professor Y C Gary Lee, Professor Cathrine Mihalopoulos, Doctor Sanjeevan Muruganandan, Professor Julian Smith, Professor Helena Teede	Targeted competitive	1/04/2025	31/03/2030	Pending	Pending	$ 4,784,123.20	
MRF2035708	Clinical Trials Activity	2023 Clinical Trials Activity	University of Sydney	University	NSW	SMART-ED: a sequential multiple assignment trial in emergency departments testing optimal implementation strategies of back pain guidelines	Back pain is the 6th most common presentation to Australian emergency departments, where overprescription of risky opioids medicines remains a significant problem. We propose a large implementation trial across 44 emergency departments to identify the optimal ingredients of an implementation strategy that can be scaled to reduce opioid prescribing for back pain. Findings would generate major improvements in health, social and economic outcomes for health systems, patients, and their families.	Doctor Gustavo Machado	Doctor Gustavo Machado, Doctor Christina Abdel Shaheed, Professor Laurent Billot, Doctor Carissa Bonner, Ms Danielle Coombs, Professor Michael Dinh, Associate Professor Leanne Hassett, Professor Chung-Wei Christine Lin, Associate Professor Thomas Lung, Mrs Kerry Mace, Professor Chris Maher, Professor James McAuley, Professor Julia Morphet, Doctor Adrian Traeger, Associate Professor Christopher Williams	Targeted competitive	1/04/2025	31/03/2031	Pending	Pending	$ 4,789,557.60	
MRF2039938	Clinical Trials Activity	2023 Clinical Trials Activity	University of Sydney	University	NSW	Implementing Generalisable Strategies for Scaling Down Low Value Care	Excessive diagnostic testing in Australian hospitals is a pervasive issue driven by time constraints and a defensive medicine culture. Past research has highlighted the potential waste and risk to patients, but scalable solutions remain elusive. This statewide collaboration with partners from academia, hospitals, and health policy makers will transform the approach to this ingrained problem, using innovative research methods.	Doctor Mitchell Sarkies	Doctor Mitchell Sarkies, Doctor Carolyn Mazariego, Doctor Andrew Milat, Associate Professor Nicole Nathan, Doctor Nhi Nguyen, Associate Professor Bonny Parkinson, Doctor Julia Pilowsky, Doctor Kristy Robledo, Craig Scowen, Doctor Heather Shepherd, Doctor Kim Sutherland, Doctor Rachel Sutherland, Associate Professor Natalie Taylor, Professor Luke Wolfenden	Targeted competitive	1/04/2025	31/03/2029	Pending	Pending	$ 2,714,539.70	
MRF1168041	Clinician Researchers	2018 Next Generation Clinical Researchers	National Ageing Research Institute	Medical Research Institute	VIC	Translating dignity principles into practice in aged care homes	Care dependent older people in aged care homes are at risk of violations to their personal dignity during continence care interactions, especially if they have dementia. Educating aged care staff about managing incontinence may protect residents' dignity and reduce conflicts in care. Informed by the Knowledge to Action Cycle, different research methods will be used to implement a multifaceted, evidence-based, feasible and sustainable person-centred 'Dignity in Continence Care Program'.	Doctor Joan Ostaszkiewicz	Not applicable	Targeted or restricted competitive	1/01/2019	31/12/2021	MEDICAL AND HEALTH SCIENCES, Nursing, Aged care nursing	Health Services Research	$ 181,066.00	Prior to 03/09/2024
MRF1150698	Clinician Researchers	2017 Next Generation Clinical Researchers	Australian National University	University	ACT	Implementation of a peer worker-led mental health recovery program	Australia faces a shortage of mental health services and mental health workers. In particular, there is a lack of clearly embedded roles for people who have a lived experience of mental health issues, peer workers. Peer workers have a unique role, connecting with people experiencing mental health issues to promote recovery. This project will evaluate a trial of a peer worker-led group recovery program in Australia.	Doctor Michelle Banfield	Not applicable	Targeted or restricted competitive	1/07/2018	30/06/2021	MEDICAL AND HEALTH SCIENCES, Public health and health services, Mental health	Health Services Research	$ 179,118.00	Prior to 03/09/2024
MRF1161076	Clinician Researchers	2018 Next Generation Clinical Researchers	Zip Diagnostics Pty Ltd	Corporation	VIC	Advancing diagnostics and vaccines for malaria elimination	This research will advance the development of new diagnostics and understanding about malaria immunity that will advance vaccine development.	Doctor Jack Richards	Not applicable	Targeted or restricted competitive	1/01/2019	31/12/2023	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Infectious diseases	Clinical Medicine and Science Research	$ 437,036.00	Prior to 03/09/2024
MRF1151055	Clinician Researchers	2017 Next Generation Clinical Researchers	University of Melbourne	University	VIC	Improving patient management pathways in age-related macular degeneration	Age related macular degeneration (AMD) is the most common cause of vision impairment in Australians aged over 50 years. In recent years, there have been a number of diagnostic tests and new interventions developed for AMD, but it has proven challenging to communicate this information to all primary eye care practitioners. This project will investigate the reasons management guidelines are not always being followed, and develop online training to provide direct bench-to-bedside AMD education.	Doctor Lauren Ayton	Not applicable	Targeted or restricted competitive	1/04/2019	30/09/2021	MEDICAL AND HEALTH SCIENCES, Ophthalmology and optometry, Ophthalmology	Health Services Research	$ 179,118.00	Prior to 03/09/2024
MRF1168155	Clinician Researchers	2018 Next Generation Clinical Researchers	Curtin University	University	WA	Pharmacy Interventions for Naloxone Scale-Up (PINS)	Deaths due to opioid overdose are preventable, yet increasing. The safe and effective treatment for opioid overdose is not easily available to those in need. Community pharmacies are accessible healthcare settings and are frequently in contact with the majority of opioid users. This project aims to implement feasible harm reduction interventions to increase the availability of opioid overdose treatment delivered through community pharmacy.	Doctor Joanna Moullin	Not applicable	Targeted or restricted competitive	1/07/2019	30/06/2022	MEDICAL AND HEALTH SCIENCES, Public health and health services, Health and community services	Health Services Research	$ 181,066.00	Prior to 03/09/2024
MRF1168314	Clinician Researchers	2018 Next Generation Clinical Researchers	La Trobe University	University	VIC	Translating evidence to improve access to paediatric therapy services	Children with disabilities often face very long waiting lists to access therapy services. Delayed care for these children can lead to missed windows of opportunity when treatment is most effective. There is a substantial body of evidence that shows that there are strategies that can be used to reduce waiting times for health services. This project will translate evidence into practice to improve access to therapy services, leading to better outcomes for children and their families.	Doctor Katherine Harding	Not applicable	Targeted or restricted competitive	1/01/2019	30/06/2022	MEDICAL AND HEALTH SCIENCES, Public health and health services, Community child health	Health Services Research	$ 181,066.00	Prior to 03/09/2024
MRF1150110	Clinician Researchers	2017 Next Generation Clinical Researchers	Flinders University	University	SA	Enhancing the capacity of mental health services to review, personalise and intervene early through implementation of real-time outcome monitoring	By monitoring functioning and symptom changes experienced by severe mental illness patients in their living environments, mental health services can identify those experiencing decline earlier and hence deliver appropriate and timely interventions. However, monitoring is currently poorly implemented in Australian mental health services and inadequately supported by national policy. The applicant proposes to address this evidence-practice gap through a mobile phone-based monitoring system.	Associate Professor Niranjan Bidargaddi	Not applicable	Targeted or restricted competitive	16/01/2018	31/12/2021	MEDICAL AND HEALTH SCIENCES, Public health and health services, Mental health	Health Services Research	$ 179,118.00	Prior to 03/09/2024
MRF1141609	Clinician Researchers	2017 Next Generation Clinical Researchers	Florey Institute of Neuroscience and Mental Health	Medical Research Institute	VIC	Mild traumatic brain injury and the risk of long-term neurodegenerative and neurobehavioural disease	Considerable media attention surrounds the potential for long-term problems in individuals with high exposure to head impacts such as seen in sporting, civilian and/or military contexts. This study examines the long-term effects of mild traumatic brain injury (mTBI) and helps close the current knowledge gap of the impact of this disorder on individuals. There are no long term trials to answer the critical question of whether mild TBI causes long term problems in the brain.	Associate Professor Paul McCrory	Not applicable	Targeted or restricted competitive	22/03/2018	31/12/2022	MEDICAL AND HEALTH SCIENCES, Neurosciences, Central nervous system	Clinical Medicine and Science Research	$ 577,188.50	Prior to 03/09/2024
MRF1137462	Clinician Researchers	2017 Next Generation Clinical Researchers	The Garvan Institute of Medical Research	Medical Research Institute	NSW	Improving outcomes in osteoporosis and bone health	Osteoporotic fractures are a common and increasing problem as the population ages. They are associated with increased risk of re-fracture and early death yet most patients remain untreated. This proposal will identify which fracture patients are at highest risk of re-fracture and premature death (b) identify whether osteoporosis treatment decreases this risk and (c) increase osteoporosis awareness and treatment uptake by general practitioners with an integrated fracture risk prediction tool.	Professor Jacqueline Center	Not applicable	Targeted or restricted competitive	1/01/2018	31/12/2022	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Endocrinology	Clinical Medicine and Science Research	$ 343,682.50	Prior to 03/09/2024
MRF1150439	Clinician Researchers	2017 Next Generation Clinical Researchers	La Trobe University	University	VIC	Implementing appropriate exercise and education for Australians with knee osteoarthritis	Knee osteoarthritis (OA) affects 4% of the population. It is effectively treated with physiotherapy led exercise and education. Most Australian's with OA do not receive these treatments, and many physiotherapists lack the required knowledge and capability to provide exercise and education. I will develop a program involving workshops and online resources to teach physiotherapists how to provide exercise and education to knee OA patients, and support patients with online education resources.	Doctor Christian Barton	Not applicable	Targeted or restricted competitive	1/01/2019	31/12/2022	MEDICAL AND HEALTH SCIENCES, Public health and health services, Public health and health services not elsewhere classified	Health Services Research	$ 179,118.00	Prior to 03/09/2024
MRF1155909	Clinician Researchers	2018 Next Generation Clinical Researchers	Monash University	University	VIC	A national cancer outcome strategy	This application is intended to establish a national cancer outcome strategy by creating and building on a platform of disease based clinical registries that allow measurement of and improvement in quality of care. These registries will also facilitate the conduct of clinical trials in real-world populations.	Professor John Zalcberg	Not applicable	Targeted or restricted competitive	1/01/2019	30/06/2024	MEDICAL AND HEALTH SCIENCES, Public health and health services, Public health and health services not elsewhere classified	Health Services Research	$ 487,893.00	Prior to 03/09/2024
MRF1141214	Clinician Researchers	2017 Next Generation Clinical Researchers	Monash University	University	VIC	Cognitive Phenotyping and Personalised Treatment for Methamphetamine Addiction	Prevention and treatment of addiction to stimulants such as methamphetamine is imperative for community health and safety. This fellowship will enable me to apply my expertise in impulsivity and addiction to identify people at risk of increasing methamphetamine use and to develop and evaluate cognitive training therapies that will empower people with methamphetamine related problems to control their drug use. Outcomes include a risk identification and triage tool and three novel therapies.	Associate Professor Antonio Verdejo-Garcia	Not applicable	Targeted or restricted competitive	1/01/2018	31/12/2021	PSYCHOLOGY AND COGNITIVE SCIENCES, Psychology, Biological psychology (neuropsychology, psychopharmacology, physiological psychology)	Clinical Medicine and Science Research	$ 476,728.00	Prior to 03/09/2024

MRF1168347	Clinician Researchers	2018 Next Generation Clinical Researchers	Monash University	University	VIC	fungalAI: Breaking the mould of the traditional antifungal stewardship paradigm	Fungal pneumonia is an uncommon but serious infection in patients with impaired immunity. Cancer chemotherapy or transplantation are major risk factors. Treatments are limited and have significant side effects and cost. Hospitals need high quality data on these infections in real-time in order to best manage them. This has not been possible until now. This project using artificial intelligence to detect, diagnose and alert doctors to fungal pneumonia in order to best drive improvements in care.	Doctor Michelle Ananda-Rajah	Not applicable	Targeted or restricted competitive	1/01/2019	31/12/2020	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Infectious diseases	Health Services Research	$ 181,066.00	Prior to 03/09/2024
MRF1139455	Clinician Researchers	2017 Next Generation Clinical Researchers	Monash University	University	VIC	Generating and translating evidence into practice in women's health and beyond	Obesity is increasing with major reproductive and metabolic health impacts for women and the next generation. This fellowships focuses on prevention of obesity and optimal diagnosis and management of obesity related reproductive and metabolic conditions in women including before and during pregnancy. Translation is vital to deliver health benefits from research. Here Professor Teede will generate new evidence and translate this into practice in women's health and beyond to deliver tangible impact.	Professor Helena Teede	Not applicable	Targeted or restricted competitive	1/01/2018	31/12/2022	MEDICAL AND HEALTH SCIENCES, Public health and health services, Public health and health services not elsewhere classified	Health Services Research	$ 494,733.00	Prior to 03/09/2024
MRF1142215	Clinician Researchers	2017 Next Generation Clinical Researchers	Monash University	University	VIC	Improving outcomes for critically ill patients after traumatic brain injury and blood transfusion	The Fellowship will support an academic clinician to lead the Alfred Intensive Care Department, and the Monash ANZIC Research Centre. Two pivotal NHMRC supported clinical trials, led by the Fellow, are each the largest and most definitive trials in their fields, and will complete during Fellowship and provide extensive data for research outputs. Concurrently, a new research program to improve patients function and quality of life after critical illness, will be supported.	Professor David Cooper	Not applicable	Targeted or restricted competitive	1/01/2018	31/12/2022	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Intensive care	Clinical Medicine and Science Research	$ 412,277.50	Prior to 03/09/2024
MRF1142809	Clinician Researchers	2017 Next Generation Clinical Researchers	Monash University	University	VIC	Improving outcomes in low back pain: Targeting specific therapies to patient subgroups	Low back pain is a major health problem worldwide. There is a lack of effective treatments and a "one size fits all" approach to treatment is being used. This innovative research program aims to change the way back pain is treated, by identifying specific types of back pain, determining the effectiveness of treatments for these types of back pain, and translating a targeted approach to management into clinical practice to improve the health of individuals with back pain.	Doctor Donna Urquhart	Not applicable	Targeted or restricted competitive	1/01/2018	31/12/2023	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Clinical sciences not elsewhere classified	Clinical Medicine and Science Research	$ 429,055.20	Prior to 03/09/2024
MRF1160133	Clinician Researchers	2018 Next Generation Clinical Researchers	Monash University	University	VIC	Next Generation Targeting of DNA-Methylation in Poor Risk Lymphoid Cancer	Lymphoma and multiple myeloma (MM) are the most common blood cancers in Australia. Unfortunately, patients with T-cell lymphoma have much worse outcomes than those with B-cell lymphoma, and MM remains incurable. This fellowship seeks to develop better treatments for MM and T-cell lymphoma. Laboratory experiments will evaluate a new class of drug designed to inhibit a target called VPRBP in the myeloma cell. Associate Professor Shortt will also conduct a clinical trial of a drug called SGI-110 in T-cell lymphoma.	Associate Professor Jake Shortt	Not applicable	Targeted or restricted competitive	1/01/2019	31/12/2022	MEDICAL AND HEALTH SCIENCES, Oncology and carcinogenesis, Haematological tumours	Clinical Medicine and Science Research	$ 218,518.00	Prior to 03/09/2024
MRF1140465	Clinician Researchers	2017 Next Generation Clinical Researchers	Monash University	University	VIC	Novel targeted onco-theranostic nanoparticles for personalised therapy and real-time monitoring	I will develop novel specific cancer therapies using next generation nanoparticles. These particles will deliver highly potent drugs to cancerous tissue avoiding damage to healthy organs. My project has the potential to increase the quality of life and survival of patients suffering from the most invasive/malignant cancers, including breast and prostate cancer.	Doctor Karen Alt	Not applicable	Targeted or restricted competitive	1/01/2018	31/12/2021	MEDICAL AND HEALTH SCIENCES, Oncology and carcinogenesis, Cancer therapy (excl. chemotherapy and radiation therapy)	Basic Science Research	$ 431,000.00	Prior to 03/09/2024
MRF1139686	Clinician Researchers	2017 Next Generation Clinical Researchers	Monash University	University	VIC	Optimising Emergency and Trauma Systems through evidence based pathways	Developing systems for emergency and trauma care based on strong evidence and robust data systems is crucial to the acute health sector. Through an extensive, well recognised collaboration of research groups at The Alfred, Monash and the National Trauma Research Institute, we aim to undertake world leading systems development both locally and globally, focusing on prehospital, emergency and trauma clinical care pathways significantly reducing mortality and improving functional outcomes.	Professor Peter Cameron	Not applicable	Targeted or restricted competitive	1/01/2018	31/12/2022	MEDICAL AND HEALTH SCIENCES, Public health and health services, Health and community services	Health Services Research	$ 412,277.50	Prior to 03/09/2024
MRF1136427	Clinician Researchers	2017 Next Generation Clinical Researchers	Monash University	University	VIC	Precision medicine for epilepsy and beyond: from discovery to implementation and evaluation	The theme of this Fellowship is to improve treatment outcomes using a genomic-based Precision Medicine approach. This goal will be achieved by 3 closely linked projects that harness the power of gene sequencing and advances in biosensor technology, coupled with careful clinical and health economic evaluation. While the emphasis is on epilepsy, the research will extend to other major disease areas of global health significance. The potential socioeconomic impact of these innovations is enormous.	Professor Patrick Kwan	Not applicable	Targeted or restricted competitive	1/01/2018	31/12/2022	MEDICAL AND HEALTH SCIENCES, Neurosciences, Central nervous system	Clinical Medicine and Science Research	$ 481,155.50	Prior to 03/09/2024
MRF1159120	Clinician Researchers	2018 Next Generation Clinical Researchers	Monash University	University	VIC	Reducing Brain Injury and Improving The Care Of High-Risk Newborn Infants	Associate Professor Wong is a consultant Neonatologist, with joint appointments at Monash Newborn and The Ritchie Centre. Her research program focuses on improving the care and outcome of sick newborn infants. While survival rates of preterm infants have improved, the problem of brain injury and long-term neuro-disability in these babies remains high. Associate Professor Wong's research combines studies both in preterm infants and animal models, to address clinical questions (bedside to bench), and then translate findings back to bedside.	Associate Professor Flora Wong	Not applicable	Targeted or restricted competitive	1/01/2019	31/12/2022	MEDICAL AND HEALTH SCIENCES, Paediatrics and reproductive medicine, Paediatrics	Clinical Medicine and Science Research	$ 241,702.00	Prior to 03/09/2024
MRF1141460	Clinician Researchers	2017 Next Generation Clinical Researchers	The Walter and Eliza Hall Institute of Medical Research	Medical Research Institute	VIC	Translational Research Program to Advance Clinical Outcomes in Acute Myeloid Leukaemia	Five-year survival in acute myeloid leukaemia (AML) is only 27%, placing it amongst the worst-ranked cancers for clinical outcome. Improved patient outcomes will be achieved through implementation of a Translational Research Program to support novel agent drug testing, early-phase and randomised clinical trials and a national clinical registry to audit outcomes. New insights into leukaemic stem cell function and mechanisms of drug resistance will inform the design of future clinical trials.	Professor Andrew Wei	Not applicable	Targeted or restricted competitive	1/01/2018	31/12/2022	MEDICAL AND HEALTH SCIENCES, Oncology and carcinogenesis, Haematological tumours	Clinical Medicine and Science Research	$ 412,419.00	Prior to 03/09/2024
MRF1168023	Clinician Researchers	2018 Next Generation Clinical Researchers	Murdoch Children's Research Institute	Medical Research Institute	VIC	Implementing evidence based management for children with dystonic cerebral palsy	The aim of this TRIP fellowship is to improve the outcomes for children with cerebral palsy who have a complex and often misunderstood movement disorder called dystonia. Dystonia interferes significantly with everyday functioning causing pain and discomfort for children. This project will implement a care pathway and measurement toolkit, based on best-available evidence, into the major treatment centres around Australia that manage children with cerebral palsy.	Doctor Adrienne Harvey	Not applicable	Targeted or restricted competitive	1/01/2019	31/12/2020	MEDICAL AND HEALTH SCIENCES, Paediatrics and reproductive medicine, Paediatrics	Clinical Medicine and Science Research	$ 181,066.00	Prior to 03/09/2024
MRF1141354	Clinician Researchers	2017 Next Generation Clinical Researchers	Murdoch Children's Research Institute	Medical Research Institute	VIC	Improving the health and development of high risk preterm newborns	Preterm children have more health and developmental problems than those born full term. Although we know the problems faced by those tiniest and most immature, more questions remain. What problems do they face as adults? What new treatments are available to improve their outcomes? Are the more "mature" preterms at risk as well? My research program aims to address these questions through the efforts of the Victorian Infant Collaborative Study team, a large research team that I lead.	Associate Professor Jeanie Cheong	Not applicable	Targeted or restricted competitive	1/01/2018	31/12/2021	MEDICAL AND HEALTH SCIENCES, Paediatrics and reproductive medicine, Paediatrics and reproductive medicine not elsewhere classified	Clinical Medicine and Science Research	$ 333,709.60	Prior to 03/09/2024
MRF1143098	Clinician Researchers	2017 Next Generation Clinical Researchers	Murdoch Children's Research Institute	Medical Research Institute	VIC	Improving upper limb function in Hereditary Cerebellar Ataxia	Friedreich ataxia (FRDA) causes incoordination and muscle weakness which may result in the affected person being unable to walk or use their arms effectively. Incoordination is a result of destruction of nerves in the spine and the area of the brain that controls movement (cerebellum). This study will assess the use of brain stimulation to improve coordination and function in people with FRDA. The results of this study may also result in treatments for similar inherited cerebellar ataxias.	Doctor Louise Corben	Not applicable	Targeted or restricted competitive	1/01/2018	31/12/2022	MEDICAL AND HEALTH SCIENCES, Neurosciences, Neurology and neuromuscular diseases	Clinical Medicine and Science Research	$ 431,000.00	Prior to 03/09/2024
MRF1141334	Clinician Researchers	2017 Next Generation Clinical Researchers	Murdoch Children's Research Institute	Medical Research Institute	VIC	Significance of low-level mosaicism to intellectual disability in paediatric disorders	My vision for the next 4 years is to improve outcomes for children and their families with inherited disorders associated with intellectual disability (ID) and autism through earlier diagnosis and intervention. This is of great importance with annual costs of ID close $14.72 billion to the Australian health system, and missed or delayed diagnoses being a significant problem, as ID is found in 1.7% of births, where a specific cause is currently identified in less than half.	Doctor David Godler	Not applicable	Targeted or restricted competitive	1/01/2018	31/12/2021	BIOLOGICAL SCIENCES, Genetics, Epigenetics (incl. genome methylation and epigenomics)	Clinical Medicine and Science Research	$ 476,728.00	Prior to 03/09/2024
MRF1161138	Clinician Researchers	2018 Next Generation Clinical Researchers	Queensland University of Technology	University	QLD	Embracing digital disruption in hospitals to improve outcomes among vulnerable people	Hospitals are transitioning to paperless systems and processes. Siloed clinical systems are being supplemented with unprecedented investment in integrated digital communication technologies including integrated electronic medical records and data linkage warehouses. This research program seeks to embrace the digitisation of hospitals by using digital information recorded in electronic systems to better understand how we can improve trauma-related care for people hospitalised with injuries.	Associate Professor Steven McPhail	Not applicable	Targeted or restricted competitive	1/01/2019	31/12/2022	MEDICAL AND HEALTH SCIENCES, Other medical and health sciences, Medical and health sciences not elsewhere classified	Clinical Medicine and Science Research	$ 483,404.00	Prior to 03/09/2024
MRF1167867	Clinician Researchers	2018 Next Generation Clinical Researchers	Sydney Local Health District	State government entity/local health district	NSW	Implementing fasting guidelines within an acute hospital surgical setting	Members of the community requiring surgical interventions are among the most vulnerable in the hospital. They are usually immobile, powerless and required to fast for procedures. Fasting guidelines exist to ensure positive clinical outcomes but the complexity of systems means patients are fasted excessively. This fellowship aims to reduce pre-operative fasting to 6 hours in two tertiary hospitals. Effective implementation strategies targeted at changing clinician behaviour will be implemented.	Doctor Sharon Carey	Not applicable	Targeted or restricted competitive	1/01/2019	30/09/2022	MEDICAL AND HEALTH SCIENCES, Nutrition and dietetics, Clinical and sports nutrition	Clinical Medicine and Science Research	$ 181,066.00	Prior to 03/09/2024
MRF1154446	Clinician Researchers	2018 Next Generation Clinical Researchers	The University of Queensland	University	QLD	Early diagnosis and treatment of lung cancer	Lung cancer is the biggest cause of cancer deaths in Australia. At present most cases of lung cancer are diagnosed at a late stage when cure is sadly not possible. This work will develop new ways to prevent and detect early lung cancer so it can be treated effectively.	Professor Kwun Fong	Not applicable	Targeted or restricted competitive	1/01/2019	30/06/2024	MEDICAL AND HEALTH SCIENCES, Cardiorespiratory medicine and haematology, Respiratory diseases	Clinical Medicine and Science Research	$ 487,893.00	Prior to 03/09/2024
MRF1167986	Clinician Researchers	2018 Next Generation Clinical Researchers	The University of Queensland	University	QLD	iAx: Instant assessment and personalised feedback in alcohol use disorder	Alcohol Use Disorder is one of the most common mental disorders. Evidence-based treatment begins with a thorough assessment and ongoing monitoring of response to treatment. However, most practitioners do not use reliable, standardised instruments in these assessments because of the time it takes to score and interpret them. This project will develop and evaluate the implementation of a computerised instant assessment and feedback system (iAx) to increase the adoption of best-practice assessment.	Doctor Matthew Gullo	Not applicable	Targeted or restricted competitive	1/01/2019	31/12/2022	PSYCHOLOGY AND COGNITIVE SCIENCES, Psychology, Health, clinical and counselling psychology	Clinical Medicine and Science Research	$ 181,066.00	Prior to 03/09/2024
MRF1154515	Clinician Researchers	2018 Next Generation Clinical Researchers	Wesley Medical Research Limited	Medical Research Institute	QLD	Improving paediatric critical care outcome	The Fellowship research program will improve paediatric critical care for children and infants, focusing on respiratory support in intensive care, post-operative care for children and infants who have undergone open heart surgery, and tackling severe sepsis in children admitted to hospital.	Associate Professor Andreas Schibler	Not applicable	Targeted or restricted competitive	1/01/2019	31/12/2024	MEDICAL AND HEALTH SCIENCES, Paediatrics and reproductive medicine, Paediatrics	Clinical Medicine and Science Research	$ 348,495.00	Prior to 03/09/2024
MRF1137127	Clinician Researchers	2017 Next Generation Clinical Researchers	The University of Queensland	University	QLD	Personalised early detection of melanoma	The incidence of melanoma in Australia continues to increase, with Queensland having the highest incidence worldwide. This research uses latest advances in genomics, imaging technologies and microbiopsy devices to develop a personalized screening program for high-risk individuals, with the aim of improving early detection, and reducing the burden of melanoma.	Professor H. Peter Soyer	Not applicable	Targeted or restricted competitive	1/01/2018	31/12/2022	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Dermatology	Clinical Medicine and Science Research	$ 577,188.50	Prior to 03/09/2024
MRF1168080	Clinician Researchers	2018 Next Generation Clinical Researchers	The University of Queensland	University	QLD	Scaling, spreading, and sustaining The Systematised, Interdisciplinary Malnutrition Program for implementation and Evaluation (SIMPLE) – a multi-site implementation program	Malnutrition harms one in three patients and is costly. Hospital dietitians currently deliver individual malnutrition care to a select few. Care models are available that engage patients and hospitals to move to multidisciplinary nutrition care. This increases the proportion of patients receiving appropriate nutrition care without increasing costs. I will lead implementation of multidisciplinary malnutrition care across Queensland Hospitals to improve patient and healthcare outcomes.	Doctor Jack Bell	Not applicable	Targeted or restricted competitive	1/01/2019	31/12/2021	MEDICAL AND HEALTH SCIENCES, Nutrition and dietetics, Clinical and sports nutrition	Clinical Medicine and Science Research	$ 181,066.00	Prior to 03/09/2024
MRF1150745	Clinician Researchers	2017 Next Generation Clinical Researchers	University of Melbourne	University	VIC	Closing the communication gap in chronic disease	Some patients with chronic disease struggle to look after their condition at home. An educational approach called teach-back has been shown to improve people's understanding of how to manage their condition. Teach-back is not commonly used in Australia, but is recommended by key policy documents. This project will develop and test a process for integrating teach-back into pre-discharge care of hospital patients with chronic conditions, by training nurses to act as teach-back mentors.	Doctor Alison Beauchamp	Not applicable	Targeted or restricted competitive	1/02/2018	31/01/2020	MEDICAL AND HEALTH SCIENCES, Nursing, Clinical nursing: secondary (acute care)	Health Services Research	$ 179,118.00	Prior to 03/09/2024
MRF1158881	Clinician Researchers	2018 Next Generation Clinical Researchers	University of Melbourne	University	VIC	Complex depression and anxiety in youth: Innovative e-therapy and biotherapy clinical trials	Depression and anxiety disorders are the most prevalent mental illnesses in Australian youth, however current treatments are only modestly effective. In this Fellowship Doctor Rice will lead 5 clinical studies with young people experiencing various illness stages of depression and anxiety. Of these, 3 studies will use a new online treatment delivered via a social media-based internet platform, with a further 2 studies testing new biological (i.e., medication and anti-inflammatory) approaches.	Doctor Simon Rice	Not applicable	Targeted or restricted competitive	1/01/2019	31/12/2022	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Psychiatry (incl. psychotherapy)	Clinical Medicine and Science Research	$ 349,628.80	Prior to 03/09/2024
MRF1142976	Clinician Researchers	2017 Next Generation Clinical Researchers	University of Melbourne	University	VIC	Elimination of Hepatitis C Virus (HCV) as a Public Health Threat	This Practitioner Fellowship will support studies that will contribute directly to the efforts to eliminate HCV infection from Australia. The research program aims to reduce transmission of HCV infection by evaluating the best models of care for i) engaging and treating high risk individuals with HCV infection, including people who inject drugs and prisoners, ii) preventing reinfection with HCV, and iii) re-treatment of individuals who fail treatment due to drug resistance.	Professor Alexander Thompson	Not applicable	Targeted or restricted competitive	1/01/2018	31/12/2022	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Gastroenterology and hepatology	Clinical Medicine and Science Research	$ 481,155.50	Prior to 03/09/2024
MRF1141738	Clinician Researchers	2017 Next Generation Clinical Researchers	University of Melbourne	University	VIC	Examining new treatments and developing new treatment biomarkers for youth with severe depression	Antidepressant medications and psychotherapy have been the mainstays of depression treatment in young people, but given their modest effectiveness, there is a pressing need for new treatment strategies. During this fellowship I aim to examine better treatments for depression, and develop better predictors about who is likely to benefit from them.	Associate Professor Christopher Davey	Not applicable	Targeted or restricted competitive	1/01/2018	31/12/2021	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Psychiatry (incl. psychotherapy)	Clinical Medicine and Science Research	$ 333,709.60	Prior to 03/09/2024
MRF1168265	Clinician Researchers	2018 Next Generation Clinical Researchers	University of Melbourne	University	VIC	From simulation to translation: A new quality improvement program for antibiotic prescribing in general practice	Antimicrobial stewardship (AMS) strategies are required in general practice to optimise appropriate antibiotic prescribing. We will implement a quality improvement program consisting of a clinical decision support tool, audit and benchmarking in four general practices and explore its acceptability and effectiveness. This implementation study directly addresses key aims of the National Antimicrobial Resistance Strategy and will inform AMS strategies and health policy for general practice.	Doctor Jo-Anne Manski-Nankervis	Not applicable	Targeted or restricted competitive	1/01/2019	31/12/2021	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Infectious diseases	Health Services Research	$ 181,066.00	Prior to 03/09/2024
MRF1140764	Clinician Researchers	2017 Next Generation Clinical Researchers	University of Melbourne	University	VIC	Neuroimaging in mental health: the quest for clinically useful biomarkers	To ultimately improve treatment of mental illness, this research program aims to detect robust and reliable neuroimaging markers that are associated with affective disorders by pooling data from many samples across the world. Moreover, this research aims to develop alternative biological-based classifications of mental illness in young people, and evaluate their clinical value by examining their predictive value for treatment response and disease course.	Assistant Professor Lianne Schmaal	Not applicable	Targeted or restricted competitive	1/01/2018	30/04/2022	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Psychiatry (incl. psychotherapy)	Clinical Medicine and Science Research	$ 431,000.00	Prior to 03/09/2024
MRF1145033	Clinician Researchers	2017 Next Generation Clinical Researchers	University of Melbourne	University	VIC	Optimising interventions for Staphylococcus aureus and skin infections	Staphylococcal and streptococcal infections are major causes of illness and death, particularly in Indigenous Australians. These include invasive bloodstream infections and skin infections that lead to chronic kidney and heart disease. I will conduct clinical trials to optimise the management of staphylococcal bloodstream infections using novel trial methods, and use genomics and mathematical modelling to understand and reduce the burden of skin infections in Indigenous communities.	Associate Professor Steven Tong	Not applicable	Targeted or restricted competitive	1/01/2018	31/12/2021	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Infectious diseases	Clinical Medicine and Science Research	$ 333,709.60	Prior to 03/09/2024
MRF1159225	Clinician Researchers	2018 Next Generation Clinical Researchers	University of Melbourne	University	VIC	Optimising Respiratory Therapies to Improve Outcomes for Preterm Infants	Preterm birth is the leading cause of newborn deaths worldwide. The smallest, sickest babies are born extremely preterm before 28 weeks' gestation; 50% of survivors develop bronchopulmonary dysplasia (BPD), the chronic lung disease of prematurity. BPD is associated with worse long-term respiratory health and neurodevelopmental outcomes. Dr Manley's research aims to increase survival and reduce morbidity in preterm infants by finding new therapies to prevent BPD, and improving early respiratory supports.	Doctor Brett Manley	Not applicable	Targeted or restricted competitive	1/01/2019	31/12/2022	MEDICAL AND HEALTH SCIENCES, Paediatrics and reproductive medicine, Paediatrics and reproductive medicine not elsewhere classified	Clinical Medicine and Science Research	$ 305,924.00	Prior to 03/09/2024

MRF1140766	Clinician Researchers	2017 Next Generation Clinical Researchers	University of Melbourne	University	VIC	Precision therapy for neurological diseases	Multiple sclerosis is the most common cause of neurological disability among young adults. The patients' individual response to therapy is highly variable. The research vision completed during this Fellowship will generate novel evidence enabling individually-tailored therapy of multiple sclerosis. Through the newly established Clinical Outcomes Research Unit at the Royal Melbourne Hospital, the expertise from observational data in multiple sclerosis will be applied in other areas of neurology.	Doctor Tomas Kalincik	Not applicable	Targeted or restricted competitive	1/01/2018	31/12/2021	MEDICAL AND HEALTH SCIENCES, Neurosciences, Neurology and neuromuscular diseases	Clinical Medicine and Science Research	$ 476,728.00	Prior to 03/09/2024
MRF1150980	Clinician Researchers	2017 Next Generation Clinical Researchers	University of New South Wales	University	NSW	Catch them when they fall: Providing best evidence care after a suicide attempt	A previous suicide attempt is the strongest predictor of death by suicide. There is a strong evidence base for the key changes required to care after a suicide attempt: implementing evidence-based care is estimated to reduce suicide attempts at the population level by approximately 12%. Yet this is an area of health services that has been difficult to reform. This project is aimed at implementing best-evidence practice in four regions of NSW, where I have established partnerships.	Doctor Fiona Shand	Not applicable	Targeted or restricted competitive	1/01/2018	29/02/2020	MEDICAL AND HEALTH SCIENCES, Public health and health services, Mental health	Health Services Research	$ 179,118.00	Prior to 03/09/2024
MRF1137587	Clinician Researchers	2017 Next Generation Clinical Researchers	University of New South Wales	University	NSW	Determinants of the outcomes from infectious diseases	This Fellowship will allow Professor Lloyd to continue clinical and laboratory research in two areas: firstly, in relation to prevention of transmission of hepatitis C infection, and scale up of antiviral treatments, particularly amongst prisoners. Secondly, in studies investigating the biological basis of chronic fatigue states following acute infection or cancer treatment, and also in development of effective treatment for chronic fatigue states.	Professor Andrew Lloyd	Not applicable	Targeted or restricted competitive	1/01/2018	31/12/2022	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Infectious diseases	Clinical Medicine and Science Research	$ 577,188.50	Prior to 03/09/2024
MRF1136064	Clinician Researchers	2017 Next Generation Clinical Researchers	The University of Newcastle	University	NSW	Discovery to therapy implementation in acute stroke	Advances in acute stroke therapies are occurring rapidly but challenges remain in their safe and effective delivery to stroke sufferers. This research focuses on testing a potentially superior 'clot busting' drug therapy for acute stroke and on identifying reasons why one of the most widely used current therapies carries a risk of significant harm due to bleeding into the brain. The work also investigates how to better implement the newest form of acute therapy, mechanical blood clot extraction.	Professor Christopher Levi	Not applicable	Targeted or restricted competitive	1/01/2018	31/12/2022	MEDICAL AND HEALTH SCIENCES, Neurosciences, Neurology and neuromuscular diseases	Clinical Medicine and Science Research	$ 577,188.50	Prior to 03/09/2024
MRF1145382	Clinician Researchers	2017 Next Generation Clinical Researchers	University of New South Wales	University	NSW	Improving internet-delivered psychological therapies for depression and anxiety	Depression and anxiety affect 3 million Australians. While effective psychological treatments exist, even the best only help 50% recover, and relapse is common. My research aims to improve the treatment of adult depression and anxiety, through developing more effective, efficient and accessible internet-delivered psychological therapies and identifying the conditions that promote optimal long-term outcomes.	Doctor Jill Newby	Not applicable	Targeted or restricted competitive	21/03/2018	31/12/2021	PSYCHOLOGY AND COGNITIVE SCIENCES, Psychology, Health, clinical and counselling psychology	Clinical Medicine and Science Research	$ 431,000.00	Prior to 03/09/2024
MRF1150335	Clinician Researchers	2017 Next Generation Clinical Researchers	University of New South Wales	University	NSW	Reducing the burden of dialysis catheter complications - a national approach	Kidney disease patients on dialysis are especially susceptible to infections due to their frequent use of healthcare services, their immune deficient state and their exposure to dialysis catheters. My project is the basis of a national initiative to reduce the burden of dialysis catheter associated bacteraemia, the most expensive healthcare acquired infection in the highest risk patient group, and drive savings of life and money.	Doctor Sradha Kotwal	Not applicable	Targeted or restricted competitive	10/05/2018	31/03/2020	MEDICAL AND HEALTH SCIENCES, Other medical and health sciences, Medical and health sciences not elsewhere classified	Clinical Medicine and Science Research	$ 179,118.00	Prior to 03/09/2024
MRF1142494	Clinician Researchers	2017 Next Generation Clinical Researchers	University of New South Wales	University	NSW	Sepsis Outcomes Research	Sepsis is a major cause of hospitalization and ICU admission in Australia population corresponding to more than 15700 new cases each year. Every year more than 3000 people die from sepsis in Australia which is greater than the annual national road toll and breast, prostate or colorectal cancer. The research outlined in this proposal to study the effect of steroids and vitamin D to improve patient's recovery from sepsis and also understand the genetic basis behind their ability to survive sepsis.	Professor Bala Venkatesh	Not applicable	Targeted or restricted competitive	1/01/2018	31/12/2022	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Intensive care	Clinical Medicine and Science Research	$ 278,795.25	Prior to 03/09/2024
MRF1149366	Clinician Researchers	2017 Next Generation Clinical Researchers	University of Sydney	University	NSW	Understanding and optimising the delivery of chronic disease care for better cardiovascular outcomes	The proposed research program will undertake research that utilises existing clinical information and structures. This information will provide evidence in a cost effective manner. A particular project will examine current treatment delivered to people with chronic disease. A second project will embed a study of the optimum level of sodium exposure in dialysis within routine clinical practice. The outcome will be a cost-efficient study that will potentially lead to improve outcomes.	Associate Professor Meg Jardine	Not applicable	Targeted or restricted competitive	21/03/2018	31/12/2021	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Nephrology and urology	Clinical Medicine and Science Research	$ 476,728.00	Prior to 03/09/2024
MRF1160036	Clinician Researchers	2018 Next Generation Clinical Researchers	University of Sydney	University	NSW	Clinical Trials To Improve Outcome of Cancer Patients	Several areas are currently of great interest in oncology including identification of effective new targeted and immunotherapies. The other area is to identify useful and reliable biomarkers to choose the best treatments for most appropriate patients. Associate Professor Khasraw will continue his research to develop a program to help cancer patients, influence clinical practice and health policy across various domains in cancer.	Associate Professor Mustafa Khasraw	Not applicable	Targeted or restricted competitive	1/01/2019	25/08/2019	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Clinical sciences not elsewhere classified	Clinical Medicine and Science Research	$ 483,404.00	Prior to 03/09/2024
MRF1143593	Clinician Researchers	2017 Next Generation Clinical Researchers	University of Sydney	University	NSW	Decreasing unnecessary surgery for low back pain	Low back pain affects one in four people in Australia and is responsible for over $8 billion spent on treatments and work loss every year. Surgery is a popular treatment approach for this multifactorial condition but we still lack high quality science to support the role of surgery for low back pain. We also lack research capacity in this field. In my fellowship, I propose to conduct high quality studies to generate and implement scientific knowledge in this field.	Associate Professor Manuela Ferreira	Not applicable	Targeted or restricted competitive	21/03/2018	31/12/2021	MEDICAL AND HEALTH SCIENCES, Public health and health services, Public health and health services not elsewhere classified	Clinical Medicine and Science Research	$ 476,728.00	Prior to 03/09/2024
MRF1135959	Clinician Researchers	2017 Next Generation Clinical Researchers	University of Sydney	University	NSW	Improving health outcomes for disadvantaged children	I am a paediatrician researcher dedicated to improving health and quality of life for ill and disadvantaged children. The focus of my Fellowship will be research in three areas: rare childhood diseases, fetal alcohol spectrum disorder, and vaccine-preventable disease, with attention to diagnosis, treatment and prevention. Alignment of my research and clinical work and my experience in evidence-based medicine will facilitate adoption of my research into clinical care and health policy.	Professor Elizabeth Elliot	Not applicable	Targeted or restricted competitive	1/01/2018	31/12/2022	MEDICAL AND HEALTH SCIENCES, Paediatrics and reproductive medicine, Paediatrics	Clinical Medicine and Science Research	$ 577,188.50	Prior to 03/09/2024
MRF1155320	Clinician Researchers	2018 Next Generation Clinical Researchers	University of Sydney	University	NSW	New approaches for treatment of alcohol use disorder	Alcohol use disorder (AUD) is a leading health problem in Australia with 5500 deaths annually. Current treatments are unsatisfactory and few people receive evidence based care. This Fellowship will develop better treatment and services to tackle this highly stigmatised disorder. I will conduct clinical trials of medications including topiramate, oxytocin and cannabidiol. I will work to overcome barriers to receiving effective care, aiming to increase the number of people receiving treatment.	Professor Paul Haber	Not applicable	Targeted or restricted competitive	1/01/2019	31/12/2023	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Clinical sciences not elsewhere classified	Clinical Medicine and Science Research	$ 418,050.00	Prior to 03/09/2024
MRF1154676	Clinician Researchers	2018 Next Generation Clinical Researchers	University of Sydney	University	NSW	The role of cortical dysfunction in Amyotrophic Lateral Sclerosis (ALS) pathophysiology	Amyotrophic lateral sclerosis (ALS) is a fatal neurodegenerative disease killing two Australians every day. The disease starts in one arm or leg, and then progresses rapidly to result in global weakness. Patients describe as being trapped in their bodies. We don't understand the reasons underlying the development of ALS or why the disease spreads very rapidly. This research will attempt to identify factors driving the rapid spread of disease, in the hope of developing effective therapies.	Professor Ostoja (Steve) Vucic	Not applicable	Targeted or restricted competitive	1/01/2019	31/12/2023	MEDICAL AND HEALTH SCIENCES, Neurosciences, Central nervous system	Clinical Medicine and Science Research	$ 585,270.00	Prior to 03/09/2024
MRF1142873	Clinician Researchers	2017 Next Generation Clinical Researchers	University of Sydney	University	NSW	Vaccine safety research in understudied and at risk groups: critical knowledge to inform practice and policy	Vaccines are typically given to healthy individuals and therefore safety issues loom high on the list of public concerns. Vaccine hesitancy due to safety concerns is an issue of increasing global interest and threatens to lower vaccine uptake. My research aims to understand why some people experience adverse reactions to vaccines, do genetic markers exist?, what are the long term outcomes of a vaccine reaction and how best to communicate vaccine risk/safety to the Australian community.	Associate Professor Nicholas Wood	Not applicable	Targeted or restricted competitive	21/03/2018	31/12/2021	MEDICAL AND HEALTH SCIENCES, Paediatrics and reproductive medicine, Paediatrics and reproductive medicine not elsewhere classified	Clinical Medicine and Science Research	$ 286,036.80	Prior to 03/09/2024
MRF1167978	Clinician Researchers	2018 Next Generation Clinical Researchers	University of Tasmania	University	TAS	Exercise is medicine so why don't General Practitioners prescribe it?	Exercise is medicine and General Practitioners are ideally placed to promote the benefits of regular exercise to their patients. Despite this advice about exercise is rarely provided in these GP consultations. This project will design, implement and evaluate the effectiveness of a series of tools designed to address the barriers to GPs recommending exercise as a treatment and increase the provision of exercise advice in this setting.	Associate Professor Andrew Williams	Not applicable	Targeted or restricted competitive	1/01/2019	31/12/2022	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Rehabilitation and therapy (excl. physiotherapy)	Health Services Research	$ 181,066.00	Prior to 03/09/2024
MRF1147363	Clinician Researchers	2017 Next Generation Clinical Researchers	University of Tasmania	University	TAS	Improving musculoskeletal pain by matching the right treatment with the right patient	Musculoskeletal pain is common, disabling, and costly in Australia. Current treatment options are poor. This program of research uses clinical trials to investigate new therapy options for osteoarthritis and chronic low back pain. These studies aim to provide new effective treatment options for patients that can improve pain, slow joint damage and decrease the overall burden of musculoskeletal disease.	Doctor Dawn Aitken	Not applicable	Targeted or restricted competitive	21/03/2018	31/12/2023	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Rheumatology and arthritis	Clinical Medicine and Science Research	$ 431,000.00	Prior to 03/09/2024
MRF1150240	Clinician Researchers	2017 Next Generation Clinical Researchers	University of Tasmania	University	TAS	Sustaining oral and systemic health in Residential Aged Care Facilities	Poor oral health is associated with many health problems. Community of Practice members will educate nurse-carer champions who then train direct care staff. The care staff will oversee 2-minutes of teeth cleaning after meals using regular or timed electric toothbrushes, or daily denture care. There will be audits of daily oral care by nurse-carer champions assisted by students, examination of used toothbrushes, regular analyses of gum-based oral bacteria.	Associate Professor Leonard Crocombe	Not applicable	Targeted or restricted competitive	1/01/2018	31/12/2019	MEDICAL AND HEALTH SCIENCES, Public health and health services, Aged health care	Health Services Research	$ 179,118.00	Prior to 03/09/2024
MRF1154192	Clinician Researchers	2018 Next Generation Clinical Researchers	University of Western Australia	University	WA	Community-based studies of diabetes and infectious diseases	Diabetes and tropical/infectious diseases are globally important and increasingly encountered in Australia. The studies covered by this Fellowship application aim to continue to improve the clinical management of these diseases through epidemiological and intervention studies in key patient groups conducted by multidisciplinary research teams that I have developed and/or lead.	Professor Timothy Davis	Not applicable	Targeted or restricted competitive	1/01/2019	31/12/2023	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Endocrinology	Clinical Medicine and Science Research	$ 585,270.00	Prior to 03/09/2024
MRF1142962	Clinician Researchers	2017 Next Generation Clinical Researchers	University of Western Australia	University	WA	Developing personalised treatment for retinal degeneration	Dr Chen seeks a clinical CDF1 to support his ambition in combining his expertise in clinical management of retinal diseases with a growing track record of clinical trials and laboratory science to develop treatment for retinal degeneration. This is achieved through a patient-centred translational platform that he has established. In the next 5 years, He will identify the most suitable method for measuring progression and develop personalised therapy for a phase I clinical trial.	Doctor Fred Chen	Not applicable	Targeted or restricted competitive	1/01/2018	31/12/2021	MEDICAL AND HEALTH SCIENCES, Ophthalmology and optometry, Ophthalmology	Clinical Medicine and Science Research	$ 258,600.00	Prior to 03/09/2024
MRF1155669	Clinician Researchers	2018 Next Generation Clinical Researchers	University of Western Australia	University	WA	Maximising health for older Australians	I am clinical geriatrician whose interests span many facets of ageing including frailty, cognitive impairment, dementia, and falls. Funding from this fellowship will allow me to focus on research activities related to these areas and related transitional activities.	Professor Leon Flicker	Not applicable	Targeted or restricted competitive	1/01/2019	31/12/2023	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Geriatrics and gerontology	Clinical Medicine and Science Research	$ 585,270.00	Prior to 03/09/2024
MRF1144544	Clinician Researchers	2017 Next Generation Clinical Researchers	University of Western Australia	University	WA	Nutritional strategies for allergy prevention	Allergic disease affects more than one in five Australian children. What foods a mother eats during pregnancy and breastfeeding, as well as when to introduce solid foods to babies, is thought to be critical in reducing the increasing burden of allergies in our Australian community. I hope to use this fellowship to discover what dietary factors put children at risk of developing a food allergy, and ways we can reduce that risk.	Doctor Debra Palmer	Not applicable	Targeted or restricted competitive	1/01/2018	31/12/2021	MEDICAL AND HEALTH SCIENCES, Immunology, Allergy	Clinical Medicine and Science Research	$ 431,000.00	Prior to 03/09/2024
MRF1136919	Clinician Researchers	2017 Next Generation Clinical Researchers	University of Western Australia	University	WA	Translational Research on Malignant Pleural Effusion and Pleural Infection	I am a leading researcher in pleural effusions (fluid build-up in the chest) from cancer and infection. I am a multicentre clinical trial team to answer important questions directly relevant to patient care, as well as a lab research group with proven record of discovery new treatment targets. This fellowship will capitalize on platforms I have built and determine best approach to remove effusions, understand etiologic roles of the fluid ultimately to find ways to stop fluid from forming.	Professor Y C Gary Lee	Not applicable	Targeted or restricted competitive	1/01/2018	30/06/2023	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Clinical sciences not elsewhere classified	Clinical Medicine and Science Research	$ 481,155.50	Prior to 03/09/2024
MRF1150099	Clinician Researchers	2017 Next Generation Clinical Researchers	University of Wollongong	University	NSW	Implementing a health literacy focused dietetic outpatient model of care for people with chronic kidney disease	A special diet is essential for keeping people with chronic kidney disease well. However inadequate health literacy prevents many people from following this diet correctly. In this project we will redesign the way health services are provided by dietitians to patients with inadequate heath literacy. We will also evaluate whether altering the type of information provided and the method that it is delivered is more effective than the current model of care.	Ms Kelly Lambert	Not applicable	Targeted or restricted competitive	1/01/2018	29/02/2020	MEDICAL AND HEALTH SCIENCES, Public health and health services, Public health and health services not elsewhere classified	Health Services Research	$ 179,118.00	Prior to 03/09/2024
MRF1154325	Clinician Researchers	2018 Next Generation Clinical Researchers	The Walter and Eliza Hall Institute of Medical Research	Medical Research Institute	VIC	Translational research to drive improved diagnosis and treatment of inflammatory diseases	I am a clinician researcher, focussed on improving the treatment of human inflammatory diseases. My research has shown that molecules best known as growth factors for blood cells also play important roles in many chronic inflammatory diseases. I research these new targets and have developed therapies that block their effects in human diseases. My leadership position in medical research facilitates this bench to bedside translation of new therapies and evidence based, patient-centred care.	Professor Ian Wicks	Not applicable	Targeted or restricted competitive	1/01/2019	31/12/2023	MEDICAL AND HEALTH SCIENCES, Immunology, Innate immunity	Clinical Medicine and Science Research	$ 418,050.00	Prior to 03/09/2024
MRF1168036	Clinician Researchers	2018 Next Generation Clinical Researchers	La Trobe University	University	VIC	Closing the evidence-practice gap in occupational health practices to prevent musculoskeletal disorders	Many musculoskeletal disorders (MSDs) are work-related, but occupational health practices targeting MSD risk are not evidence-based, focusing just on manual handling hazards with little worker input. This project will train and support workplace practitioners to implement a 'toolkit' (risk management tools) addressing all relevant hazards. New online resources will enable widespread toolkit use in future. Expected outcomes include fewer people with MSDs and lower costs to the healthcare system.	Associate Professor Jodi Oakman	Not applicable	Targeted or restricted competitive	1/08/2019	30/06/2023	MEDICAL AND HEALTH SCIENCES, Public health and health services, Environmental and occupational health and safety	Public Health Research	$ 181,066.00	Prior to 03/09/2024
MRF1193862	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	University of South Australia	University	SA	Evidence-based digital technologies for health behaviour	Poor lifestyle patterns (physical inactivity, excess sedentary behaviour, lack of sleep, poor diet) are leading modifiable causes of death and disease in Australia. It is vital we improve health behaviors in our communities, particular within high-risk groups. The rapid growth of technologies has created new possibilities for health interventions. Innovative research is needed to harness this potential by creating and translating personalised, scalable technology-based interventions.	Associate Professor Carol Maher	Not applicable	Targeted competitive	1/01/2021	31/12/2025	MEDICAL AND HEALTH SCIENCES, Public health and health services, Preventive medicine	Public Health Research	$ 1,118,593.01	Prior to 03/09/2024
MRF1197846	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	Macquarie University	University	NSW	Screening and Risk Reduction for Dementia in Primary Care	Without a cure for dementia, risk reduction is paramount. Co-designed with consumers and GPs, this project will evaluate the effectiveness of a structured screening and risk reduction tool for dementia implemented in primary care. This tool will enable identification of amenable risks, guide GP and consumer joint decision making about the most appropriate evidence-based interventions to reduce the identified risks, and facilitate interventions. The tool will be evaluated in a clinical trial.	Professor Viviana Wuthrich	Not applicable	Targeted competitive	1/01/2021	31/12/2025	PSYCHOLOGY AND COGNITIVE SCIENCES, Psychology, Health, clinical and counselling psychology	Public Health Research	$ 1,562,250.00	Prior to 03/09/2024
MRF1194970	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	The Walter and Eliza Hall Institute of Medical Research	Medical Research Institute	VIC	Advancing Personalised Treatment in Colorectal Cancer with Tissue and Liquid Biomarkers	I am leveraging my world leading studies of liquid biopsy (circulating tumour DNA) as recurrence marker in bowel cancer, where there are unique opportunities to further improve tissue and blood test based prognostication (by adding more markers), to move forward the field of "fear of cancer" (questionnaires to better understand and improve the patient experience), to collect cost of care data to demonstrate the cost-effectiveness of this approach, and to develop new treatment.	Associate Professor Jeanne Tie	Not applicable	Targeted competitive	1/01/2021	31/12/2025	MEDICAL AND HEALTH SCIENCES, Oncology and carcinogenesis, Solid tumours	Clinical Medicine and Science Research	$ 1,187,350.00	Prior to 03/09/2024
MRF1196010	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	University of Melbourne	University	VIC	Closing the critical knowledge gaps in perinatal genomics	Over the past decade, advances in genetics have impacted every aspect of medicine, including the care of pregnant women and their babies (perinatal medicine). "Genomics" is the modern term for genetics on a large scale: it is the study of a person's complete set of DNA, rather than individual genes. The application of genomics in perinatal medicine has created both benefits and concerns. This program will provide the essential evidence to guide responsible progress in perinatal genomics.	Associate Professor Lisa Hui	Not applicable	Targeted competitive	1/01/2021	31/12/2026	MEDICAL AND HEALTH SCIENCES, Paediatrics and reproductive medicine, Foetal development and medicine	Clinical Medicine and Science Research	$ 1,281,125.00	Prior to 03/09/2024
MRF1193796	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	University of Western Australia	University	WA	Preventing Bronchiectasis in Indigenous People	Aboriginal people are severely affected by lung disease. Much chronic disease can be prevented if early respiratory symptoms can be detected early and children are given optimal treatment. My research will apply knowledge translation methods to bridge the gap between evidence and practice to ensure that the primary health workforce in Australia is skilled with, up to date, and apply current best practice in paediatric indigenous lung health.	Doctor Andre Schultz	Not applicable	Targeted competitive	1/01/2021	31/12/2025	MEDICAL AND HEALTH SCIENCES, Cardiorespiratory medicine and haematology, Respiratory diseases	Clinical Medicine and Science Research	$ 1,131,125.00	Prior to 03/09/2024

MRF1197249	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	Flinders University	University	SA	Tackling it with Tech: Using novel Internet solutions to overcome the burden of depression in youth	Depression is common in youth and suicide is a tragic and fatal outcome. My research explores how the Internet can be used to detect young people in need of mental healthcare, deliver accessible and engaging treatments, and provide schools and professionals with new tools and services to proactively identify youth early so that they can get the right care at the right time. This research program will transform how young Australians receive care, significantly reducing the burden of depression.	Doctor Bridianne O'Dea	Not applicable	Targeted competitive	1/01/2021	31/12/2026	MEDICAL AND HEALTH SCIENCES, Public health and health services, Mental health	Public Health Research	$ 620,205.00	Prior to 03/09/2024
MRF1194787	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	University of Melbourne	University	VIC	Saving time, saving brain through prehospital stroke care	This research project aims to improve outcomes for stroke patients through new treatments that can be started at the patient's doorstep. Projects include performing the world's first trial of a drug designed to halt bleeding into the brain on Australia's first treatment stroke ambulance. Other projects will include assessing outcomes for patients treated on the stroke ambulance and improving paramedic recognition of patients needing specialised interventional treatments.	Doctor Henry Zhao	Not applicable	Targeted competitive	1/01/2021	31/12/2025	MEDICAL AND HEALTH SCIENCES, Neurosciences, Central nervous system	Clinical Medicine and Science Research	$ 645,205.00	Prior to 03/09/2024
MRF1194615	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	Menzies School of Health Research	Medical Research Institute	NT	Moving together towards the elimination of chronic Hepatitis B in the Northern Territory	Aboriginal and Torres Strait Islander Australians are disproportionately affected by chronic hepatitis B infection and liver cancer. As a specialist doctor and clinical-researcher, I am working in partnership with Aboriginal people to eliminate hepatitis B from the Aboriginal population of the Northern Territory (NT). Together with Aboriginal people in the NT, scientists and health professionals I will provide evidence for improved culturally safe care for people living with hepatitis B.	Doctor Jane Davies	Not applicable	Targeted competitive	1/01/2021	31/12/2025	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Infectious diseases	Clinical Medicine and Science Research	$ 1,131,125.00	Prior to 03/09/2024
MRF1194576	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	Monash University	University	VIC	Optimise Primary Aldosteronism Detection For Better Health Outcomes	Primary aldosteronism (PA) is a preventable, but often unrecognised cause of high blood pressure, strokes and heart disease. However, doctors do not routinely screen for it. A simple blood test could mean the difference between receiving a cure or requiring chronic complex care. My research will determine how common PA is in our community and develop guidelines to improve its detection to benefit hundreds of thousands of Australians living with hidden PA.	Doctor Jun Yang	Not applicable	Targeted competitive	1/01/2021	31/12/2025	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Endocrinology	Clinical Medicine and Science Research	$ 570,205.00	Prior to 03/09/2024
MRF1197177	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	University of Western Australia	University	WA	Better penicillin, better hearts: improving secondary prevention of rheumatic heart disease	Getting 'the penicillin needle' every month is the only way we currently have to prevent RHD, but due to pain associated with injections given into the muscle, adherence to this is poor. An injection of penicillin given at a higher dose, but under the skin (subcutaneously) could allow us to schedule the needle every 3 months instead. To get the most from any new penicillin, we also need to know what level of penicillin is required to prevent the sore throats and skin infections that cause RHD.	Doctor Laurens Manning	Not applicable	Targeted competitive	1/01/2021	31/12/2025	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Infectious diseases	Clinical Medicine and Science Research	$ 1,281,125.00	Prior to 03/09/2024
MRF1194084	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	Flinders University	University	SA	Meeting psychological needs to improve the quality and safety of aged care	Improving the quality and safety of aged care is in best the interests of us all: two-thirds of us will access an aged care service in our lifetime. Innovative models of care that could achieve this aim exist, but a fundamental lack of expertise about how to implement them into the complex aged care sector gets in the way. This research will trial new approaches and identify the key ingredients to assist the aged care sector to implement the best-quality care.	Doctor Monica Cations	Not applicable	Targeted competitive	1/01/2021	31/12/2025	MEDICAL AND HEALTH SCIENCES, Public health and health services, Aged health care	Health Services Research	$ 420,078.91	Prior to 03/09/2024
MRF1193946	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	University of Melbourne	University	VIC	Using a purpose-built digital assessment tool to determine the mechanisms driving addictive behaviours and its utility to improve treatment engagement and outcomes	The clinical assessment of people with drug, alcohol or other behavioural addictions (e.g. gambling) has traditionally relied on measuring the frequency and severity of the behaviour itself, and not the underlying brain-based processes that lead to these problems. This study will test a neurocognitive framework for addictions - derived from a panel of world leading experts in the field - to establish a unifying, scientifically-informed understanding of the core processes driving addictions.	Doctor Sze Lee	Not applicable	Targeted competitive	1/01/2021	31/12/2025	PSYCHOLOGY AND COGNITIVE SCIENCES, Psychology, Biological psychology (neuropsychology, psychopharmacology, physiological psychology)	Clinical Medicine and Science Research	$ 645,205.00	Prior to 03/09/2024
MRF1193736	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	University of Melbourne	University	VIC	A Neural Systems Model to Optimize Treatment Outcomes in Binge Eating Populations	This project will use advanced brain imaging techniques to understand how people that binge eat process negative beliefs. Over the next 5 years, I will establish a research program that uses brain-based factors to predict which patients will respond to certain treatments and to develop personalized treatment options. The findings of this project will be used to improve treatment outcomes and help people that binge eat to obtain long-term recovery.	Doctor Trevor Steward	Not applicable	Targeted competitive	1/01/2021	31/12/2025	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Psychiatry (incl. psychotherapy)	Clinical Medicine and Science Research	$ 645,205.00	Prior to 03/09/2024
MRF1197307	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	Murdoch Children's Research Institute	Medical Research Institute	VIC	Establishing the early diagnosis of atherosclerosis and cardiovascular risk factors in adults with repaired aortic arch obstruction: The key to decreasing premature death	Aortic arch obstruction is a condition where there is a narrowing in the aorta (main blood vessel from the heart supplying blood to the body) and usually requires surgery early in life. There is a high rate of death in young adults which is linked to accelerated heart disease. This research aims to establish if a CT scan of the heart (coronary artery calcium scoring) can help us identify young adults at highest risk of heart disease before its development.	Doctor Melissa Lee	Not applicable	Targeted competitive	1/01/2021	31/12/2026	MEDICAL AND HEALTH SCIENCES, Cardiorespiratory medicine and haematology, Cardiology (incl. cardiovascular diseases)	Clinical Medicine and Science Research	$ 329,041.00	Prior to 03/09/2024
MRF1194785	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	The University of Newcastle	University	NSW	Sustaining the implementation of evidence-based chronic disease prevention programs in education	Governments invest considerable resources in implementing diet, physical activity and obesity prevention initiatives in education settings. However, unless they are sustained, the public health benefits of such investments are reduced. Over the next 5 years my research program will address key impediments to sustainability research by producing evidence on the determinants of, and effective strategies for, sustaining these interventions in educational settings.	Doctor Nicole Nathan	Not applicable	Targeted competitive	1/01/2021	31/12/2025	MEDICAL AND HEALTH SCIENCES, Public health and health services, Public health and health services not elsewhere classified	Health Services Research	$ 1,562,250.00	Prior to 03/09/2024
MRF1196252	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	The University of Newcastle	University	NSW	Personalised biomarker-guided management of asthma during pregnancy	Asthma is common in pregnancy, and asthma attacks are associated with poor outcomes for the offspring. We developed a novel management strategy which halves asthma attacks in pregnancy and reduces bronchiolitis and asthma in children. This grant will test the implementation of this strategy into routine antenatal care, and determine the health and developmental benefits for offspring, to provide evidence to improve clinical practice in the area of asthma management in pregnancy.	Doctor Vanessa Murphy	Not applicable	Targeted competitive	1/01/2021	31/12/2025	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Clinical sciences not elsewhere classified	Clinical Medicine and Science Research	$ 1,562,250.00	Prior to 03/09/2024
MRF1195153	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	University of Sydney	University	NSW	Policy-driven research to improve the immunisation program for young children	Vaccines are the most effective way to prevent childhood diseases. Evidence-based policies are required to ensure vaccination strategies optimally benefit the Australian population. This project leverages a decade of quality research and aims to improve Australia's public health actions in the prevention of whooping cough, gastrointestinal infections and pneumonia.	Professor Thomas Snelling	Not applicable	Targeted competitive	1/01/2021	31/12/2025	MEDICAL AND HEALTH SCIENCES, Public health and health services, Preventive medicine	Public Health Research	$ 1,062,555.48	Prior to 03/09/2024
MRF1194297	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	Deakin University	University	VIC	Improving outcomes for children and adolescents with Attention-Deficit/Hyperactivity Disorder (ADHD) and their carers	Attention deficit hyperactivity disorder (ADHD) affects 5% of Australian young people. This investigator grant aims to improve outcomes for young people with ADHD through 1) a better understanding of long-term outcomes and key factors associated with positive outcomes; 2) the development of new psychosocial interventions; and 3) community engagement research to create an international research agenda and to address stigma.	Associate Professor Emma Sciberras	Not applicable	Targeted competitive	1/06/2020	28/07/2023	MEDICAL AND HEALTH SCIENCES, Public health and health services, Community child health	Clinical Medicine and Science Research	$ 1,544,073.15	Prior to 03/09/2024
MRF1193815	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	The University of Queensland	University	QLD	Supporting adults to sit less and move more for chronic disease prevention and management	New guidelines now recommend adults move more AND sit less. My program of research will develop and test interventions to support adults to achieve this recommendation. It will also generate new knowledge on the associated health and wellbeing impact of doing so. The research will focus on two key populations: desk workers and adults with chronic disease. Findings will result in evidence-based programs that can be delivered at scale within the workplace and clinic setting.	Associate Professor Genevieve Healy	Not applicable	Targeted competitive	1/06/2020	31/05/2025	MEDICAL AND HEALTH SCIENCES, Human movement and sports science, Human movement and sports science not elsewhere classified	Public Health Research	$ 1,487,455.48	Prior to 03/09/2024
MRF1194139	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	University of Sydney	University	NSW	Innovative regenerative therapies for heart repair	The project aims to develop new therapies to regenerate the infarcted and failing heart. The interconnected themes include: 1) pluripotent stem cell derived cardiomyocyte grafts and 2) drug treatment to alter the heart matrix 3) prevention of sudden cardiac death by heart regeneration.	Associate Professor James Chong	Not applicable	Targeted competitive	1/06/2020	31/12/2025	MEDICAL AND HEALTH SCIENCES, Cardiorespiratory medicine and haematology, Cardiology (incl. cardiovascular diseases)	Basic Science Research	$ 1,562,250.00	Prior to 03/09/2024
MRF1197970	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	Murdoch Children's Research Institute	Medical Research Institute	VIC	Keeping children out of hospital by being smarter with antibiotics	Hospitals are not the best place for children. They have worse psychological outcomes and are at risk of hospital-associated adverse events. One of the commonest reasons children are admitted to hospital is to receive intravenous (IV, through a drip). The aim of this program is 1) to find out whether for some infections children do just as well taking oral antibiotics, and 2) to find out whether for infections really needing IV antibiotics, children can be treated just as safely at home.	Associate Professor Penelope Bryant	Not applicable	Targeted competitive	1/06/2020	31/12/2025	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Infectious diseases	Health Services Research	$ 1,281,125.00	Prior to 03/09/2024
MRF1195894	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	University of Melbourne	University	VIC	Minimising infective complications in the era of immune-based cancer therapies through precision, prediction and prevention	New cancer treatments are based on enhancing the immune system. However infections continue to affect many patients; disrupting their care, removing survival benefit from new cancer treatments and causing early deaths. With immune based therapies, types of infections seen and how to prevent them are still unknown. The proposed research will gain new knowledge of infections, study new technologies to detect and predict future infection risk and better ways to prevent infections from occurring.	Doctor Benjamin Teh	Not applicable	Targeted competitive	1/06/2020	31/12/2025	MEDICAL AND HEALTH SCIENCES, Medical microbiology, Medical microbiology not elsewhere classified	Clinical Medicine and Science Research	$ 1,165,633.42	Prior to 03/09/2024
MRF1196539	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	University of New South Wales	University	NSW	Investigating novel therapies for heart failure with preserved ejection fraction	Patients with heart failure related to a 'stiff heart' often have poor quality of life, shortness of breath and repeat hospital admissions. Other conditions like high blood pressure and obesity can make this condition worse. Currently, there are no treatments to make these patients feel better or prevent them from becoming unwell and needing to go to hospital. I aim to find a new treatment for these patients, which will help them feel better, lose weight and reduce hospitalisation.	Doctor Clare Arnott	Not applicable	Targeted competitive	1/06/2020	31/12/2025	MEDICAL AND HEALTH SCIENCES, Cardiorespiratory medicine and haematology, Cardiology (incl. cardiovascular diseases)	Clinical Medicine and Science Research	$ 387,123.00	Prior to 03/09/2024
MRF1193897	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	University of Melbourne	University	VIC	Putting 3D printing into the reality of surgery: an approach for regenerating joint cartilage within the body using one-step surgery	Injuries to articular joints represent a huge cost to the health system. As academic orthopaedic surgeon specialist in robotic and 3D bioprinting, I aim at regenerating the building block of articular joints, by replacing the damaged tissue directly at surgery. My Research Program, performed in one of the most advanced 3D bioprinting facilities in Australia, in collaboration with world leaders in bioengineering, can open the way for bioprinting in surgery to regenerate tissues and organs.	Doctor Claudia Di Bella	Not applicable	Targeted competitive	1/06/2020	31/05/2025	ENGINEERING, Biomedical engineering, Biomedical engineering not elsewhere classified	Basic Science Research	$ 447,602.50	Prior to 03/09/2024
MRF1194324	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	The University of Queensland	University	QLD	Immuno-genetic biomarkers of response in a prospective study of immune checkpoint therapy in primary CNS lymphoma	Primary Central Nervous System Lymphoma (PCNSL) is a rare brain cancer with poor outcomes using standard available therapies. Even if cured patients are left with significant problems due to the intense therapy. There is emerging data that this cancer may develop due to the tumours ability to avoid immune detection in the brain and this study will try to understand how the immune system can be tuned to eradicate the cancer cells.	Doctor Colm Keane	Not applicable	Targeted competitive	1/06/2020	31/12/2025	MEDICAL AND HEALTH SCIENCES, Oncology and carcinogenesis, Haematological tumours	Basic Science Research	$ 1,393,575.00	Prior to 03/09/2024
MRF1195517	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	The University of Adelaide	University	SA	Understanding molecular pathogenesis of therapy related myeloid neoplasm	Some treated cancer patients develop aggressive blood cancers, most probably due to chemotherapy and radiotherapy for their primary cancer. Their survival is <12 months and they have very limited treatment choices. Hence, understanding of risk factors and mechanisms of treatment-related blood cancers is crucial. We aim to understand the complex interaction between chemotherapy induced damage to bone marrow cells and patient's genetic factors responsible for treatment related blood cancer.	Doctor Devendra Hiwase	Not applicable	Targeted competitive	1/06/2020	31/05/2025	MEDICAL AND HEALTH SCIENCES, Oncology and carcinogenesis, Haematological tumours	Basic Science Research	$ 620,205.00	Prior to 03/09/2024
MRF1193727	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	University of Melbourne	University	VIC	Developing a coherent national approach to the clinical and public health management of invasive Strep A disease	Public awareness of meningococcal disease is high, but most people don't know that another pathogen, Strep A, kills more people every year in Australia. Invasive Strep A – the deadliest form of this disease – can spread to those closest to a Strep A case. Unlike meningococcal disease, there is no national approach to preventing or managing invasive Strep A. Research during this fellowship will result in a consistent approach to managing and preventing invasive Strep A in Australia.	Doctor Katherine Gibney	Not applicable	Targeted competitive	1/06/2020	31/12/2025	MEDICAL AND HEALTH SCIENCES, Public health and health services, Epidemiology	Public Health Research	$ 1,449,800.00	Prior to 03/09/2024
MRF1195030	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	Monash University	University	VIC	Blood based detection and monitoring of pre-malignant clonal haematopoiesis to predict clinical outcomes in the immunocompromised	Clonal haematopoiesis is when genetic mutations (alterations in the DNA) can be detected in blood stem cells of an individual and can increase the risk of cancer, heart disease, stroke and death. This study looks to explore how clonal haematopoiesis is formed and how it leads to adverse health outcomes. We will identify risk factors for clonal haematopoiesis which will guide the development of future screening programs and research into how this process can be better managed.	Doctor Paul Yeh	Not applicable	Targeted competitive	1/06/2020	31/12/2025	MEDICAL AND HEALTH SCIENCES, Cardiorespiratory medicine and haematology, Haematology	Clinical Medicine and Science Research	$ 620,734.77	Prior to 03/09/2024
MRF1194768	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	The University of Newcastle	University	NSW	A big problem needs a big solution: Advancing the science of scaling up chronic disease prevention interventions	Chronic disease are responsible for 90% of deaths in Australia. Years of research has produced a range of policies and programs which could prevent the onset of chronic diseases. However, too few of these programs are ever scaled up to reach the communities they were intended for. Targeting children and families, my research aims to advance the evidence of how to effectively scale up policies and programs within the school setting so they can prevent the onset of chronic disease.	Doctor Rachel Sutherland	Not applicable	Targeted competitive	1/06/2020	31/05/2025	MEDICAL AND HEALTH SCIENCES, Public health and health services, Health promotion	Health Services Research	$ 1,562,250.00	Prior to 03/09/2024
MRF1193738	Clinician Researchers	2019 Investigator Grants: Medical Research Future Fund Priority Round	University of Melbourne	University	VIC	The male experience of eating and body image disorders	Eating and body image disorders are devastating psychological conditions suffered by millions of Australian boys and men. However, despite overwhelming evidence that males experience eating and body image disorders in fundamentally different ways to women, there are no early-intervention or prevention programs designed specifically for males. My research program will develop new early-intervention and prevention programs to help this under-studied and under-served group.	Doctor Scott Griffiths	Not applicable	Targeted competitive	1/06/2020	31/12/2025	PSYCHOLOGY AND COGNITIVE SCIENCES, Psychology, Health, clinical and counselling psychology	Public Health Research	$ 1,562,250.00	Prior to 03/09/2024
MRFAR000162	Clinician Researchers	2020 Clinician Researchers: Applied Research in Health	Queensland Rural Medical Education Limited	Corporation	QLD	Assessing cultural safety in GP consultations for Indigenous Australians	Significant health disparities exist for Australian Aboriginal and Torres Strait Islander people. Training a culturally safe health workforce is vital to address this issue. Despite recognition that the definition of cultural safety must be determined by Indigenous people and communities, there are currently no tools to assess cultural safety within consultations based on community-derived data. This project will explore cultural safety as described by Australian Indigenous people, with the aim of developing a tool to assess general practitioner cultural safety based on these insights. As an organisation involved in medical education, this project will allow us to assess cultural safety more appropriately in medical learners. MRFAR000054	Clinician Researchers	2020 Clinician Researchers: Applied Research in Health	University of Melbourne	University	VIC	Transforming Clinical Research to Improve Outcomes for Preterm Infants	15 million babies are born preterm each year. Preterm birth is the leading cause of death and disability among children < 5 years. There is urgent need for interventions to reduce complications of prematurity and improve outcomes. Traditional trials are often resource intense and may take years. Adaptive Platform Trials are innovative allowing multiple interventions to be evaluated simultaneously. This project will develop an Australasian Adaptive Platform Trial to Improve Preterm Birth Outcomes. The project will identify research priorities and core outcomes important to families and the health service. It will build the infrastructure and expertise required to run the Platform trial and implement the findings into clinical practice.	Doctor Clare Whitehead	Doctor Clare Whitehead, Associate Professor Brett Manley, Associate Professor Katie Groom, Professor Peter Davis, Professor Ben Mol, Professor John Newnham, Professor Steve Webb, Professor Jonathon Morris, Professor Della Forster, Professor Kei Lui, Professor Jeanie Cheong, Doctor Kirsten Palmer, Professor Sailesh Kumar, Professor Adrienne Gordon, Associate Professor Michael Stark, Associate Professor Tobias Strunk, Profesxir Peter Dargaville, Doctor Holger Unger, Doctor Kiarna Brown	Open competitive	14/04/2022	31/03/2026	Not available	Not available	$ 2,642,199.00	Prior to 03/09/2024
MRFAR000166	Clinician Researchers	2020 Clinician Researchers: Applied Research in Health	Monash University	University	VIC	Intensive physiotherapy to lower hospital length of stay after hip fracture	This clinical trial will test whether intensive physiotherapy delivered early following hip fracture can accelerate physical recovery and reduce hospital days. We will recruit 620 participants from 8 acute hospitals across 5 Australian states. Intervention participants receive intensive physiotherapy 3 times/day for 7 days during their acute hospital stay. The primary outcome is length of stay, with secondary outcomes of physical mobility, health-related quality of life and falls. Longer-term impact and health care costs will be quantified with 12-month follow up. We will embed implementation science methods to enhance translation of findings into routine care, and will build clinical research capacity in health services across Australia.	Professor Anne Holland	Professor Anne Holland, Doctor Lara Kimmel, Professor Ian Harris, Associate Professor Ilana Ackerman, Professor Richard Page, Associate Professor Justine Naylor, Doctor Angela Burge	Open competitive	14/04/2022	30/06/2025	Not available	Not available	$ 2,930,647.00	Prior to 03/09/2024
MRFAR000034	Clinician Researchers	2020 Clinician Researchers: Applied Research in Health	University of Melbourne	University	VIC	Validating cognitive screening for first-episode psychosis - CogScreen	Cognitive impairment is common in first-episode psychosis (FEP) and predicts poorer patient outcomes. Clinical guidelines recommend routine cognitive screening of patients with psychosis so that treatment is in line with the cognitive needs of the patient. The problem is that there are no well-validated cognitive screening tools for clinical use in FEP. The CogScreen study will establish the most accurate cognitive screening tool for patients attending Australian early psychosis services. CogScreen will provide clinicians with a rapid and cost-effective way of identifying cognitive impairment in FEP patients, so that they can refine diagnosis and deliver more effective treatments and services, leading to better outcomes for patients.	Associate Professor Kelly Allott	Associate Professor Kelly Allott, Doctor Shayden Bryce, Professor Andrew Thompson, Doctor Shona Francey, Professor Stephen Bowden, Associate Professor Scott Clark, Associate Professor Oliver Schubert, Professor Anthony Harris, Doctor Candice Jensen, Ms Anna Scully, Doctor Christopher O'Halloran, Professor Scot Purdon	Open competitive	14/04/2022	30/06/2025	Not available	Not available	$ 2,294,990.00	Prior to 03/09/2024
MRFAR000076	Clinician Researchers	2020 Clinician Researchers: Applied Research in Health	Monash University	University	VIC	PROMOTE: a cluster-randomised implementation trial to promote evidence use	The PROMOTE randomised controlled trial will test the clinical benefit and cost effectiveness of an implementation package to increase clinician use of arm and stroke rehabilitation evidence in practice. We will recruit 14 hospitals across 3 Australian states to deliver arm rehabilitation to 238 patients after stroke. The primary outcome is clinician adherence to guidelines, with secondary outcomes of patient arm and hand movement, health-related quality of life and cost. In partnership with the Stroke Foundation, we will embed consumer involvement and employ implementation science methods to conduct a process evaluation alongside the trial. Together these will allow rapid translation of findings into routine stroke care.	Professor Natasha Lannin	Professor Natasha Lannin, Doctor Laura Jolliffe, Doctor Katheryn Scrivener, Doctor Zoe Adey-Wakeling, Doctor Rania Abdulmutalab, Doctor Brian Anthonisz, Doctor Louis Baggio, Proessor David Berlowitz, Doctor Carlos Garcia Esperon, Ms Alanna Grover, Doctor Owen Howlett, Ms Brynn Lewin	Open competitive	14/04/2022	30/06/2026	Not available	Not available	$ 2,996,464.00	Prior to 03/09/2024
MRFAR000280	Clinician Researchers	2020 Clinician Researchers: Applied Research in Health	The George Institute for Global Health	Medical Research Institute	NSW	Optimal Post rTPA-iv Monitoring in Ischaemic Stroke (OPTIMISTmain)	The OPTIMISTmain will compare standard monitoring versus low-intensity monitoring schedule for 24 hours following thrombolytic therapy for acute ischaemic stroke. The key difference in the monitoring schedule is over the 2- to 24-hour time period; there will be no difference in the frequency of monitoring over the first 2 hours when most bleeding complications tend to occur. This research will establish whether a widely applicable less-intense monitoring schedule improves patient recovery, and allows freeing up of health care resources to engage in direct stroke management or care elsewhere, leading to avoidance of unnecessary intensive care unit stay, expedited stroke work-up, and reduced hospital stay.	Professor Craig Anderson	Professor Craig Anderson, Mrs Kylie Tastula, Professor Richard Lindley, Mrs Debbie Summers, Mrs Brenda Johnson, Associate Professor Victor Urrutia, Mrs Dianna Day, Professor Thompson Robinson	Open competitive	14/04/2022	1/05/2025	Not available	Not available	$ 1,774,988.00	Prior to 03/09/2024
MRFAR000210	Clinician Researchers	2020 Clinician Researchers: Applied Research In Health	University Of New South Wales	University	NSW	The Australian Endometriosis Clinicians Collaborative (AECC)	Endometriosis affects 1 in 9 Australian women, has a diagnostic delay of 7 years and costs the economy $9.7 billion annually. The AECC is a prospective longitudinal clinical study that will: 1. compare imaging accuracy of endometriosis in general vs specialised settings; compare medical vs surgical treatment of endometriosis with regards to impact on pain, general health symptoms and quality of life using validated questionnaires 2. determine cost-effectiveness of both diagnostic imaging and treatment options 3. establish a national biobank of endometriosis for future research capacity. Outcomes will determine optimised diagnosis and treatment pathways for clinicians and that improve quality of life for women with endometriosis. MRF9200002	Coronavirus Research Response	2020 COVID-19 Diagnosis Platform (CovED)	University of Sydney	University	NSW	Transforming recognition and assessment of COVID-19 in Australia using lung CT	COVID-19 is arguably the biggest health challenge facing Australia and the world for the last 100 years. Accurate assessment of the appearances of COVID-19 on lung CT scans is critically important to the management of patients and the containment of the disease. Research to date has shown large variability in clinicians' ability to recognise CT lesions. The current work will address this variability and builds on our previous research achievements which has built effective systems for other diseases. The result will be an innovative intelligent education solution with AI integration that will transform COVID-19 diagnostic efficacy	Professor Patrick Brennan	Professor Patrick Brennan, Professor Stuart Grieve	Closed non-competitive	15/05/2020	30/06/2021	Not available	Not available	$	1,042,698.00	Prior to 03/09/2024
MRF2002317	Coronavirus Research Response	2020 COVID-19 Diagnostics	University of Melbourne	University	VIC	COVID-19 Strategic Planning and Delivery of Testing	This project consists of four key sub-projects that tackle the evolving pandemic, increase testing capability and control transmission of COVID-19. 1. 'One-step' nucleic acid detection that saves on critical lab consumables and is rapid. 2. Post-market evaluation of TGA approved diagnostic tests before to ensure the quality, accuracy and sensitivity. 3. Development of new testing protocols to enable more individuals to be tested. 4. Testing and validation of serological POCT and assays. MRF1202445	Coronavirus Research Response	2020 Novel Coronavirus Vaccine Development	The University of Queensland	University	QLD	Molecular Clamp Stabilized Spike Vaccine for Rapid Response	The Molecular Clamp platform is Australia's most advanced COVID-19 vaccine and is one of only four programs globally supported by CEPI for a rapid response to the outbreak. The strategic partners driving this application, The University of Queensland (UQ), The Doherty Institute (Doherty), and The Commonwealth Science Industrial Research Organisation (CSIRO), aim to complete pre-clinical evaluation of safety and protective efficacy in Q2 and Phase I human trials in Q3 2020. This will run in parallel with a separately proposed plan to expedite manufacturing at-scale. This ambitious approach has the potential to enable an Australian vaccine at an unprecedented pace, and have significant numbers of product in vial by the end of 2020 for further clinical and potential emergency distribution. If Covid-19 health measures are insufficiently slow infection rates, this increased speed has the potential to have a major impact, especially for those at most risk, people with pre-existing medical conditions and the elderly. Given our recent progress, including identification of a candidate vaccine molecule, the funds requested in this proposal will be critical for studies designed to measure correlates of immune protection in COVID-19 patients during recovery and any immune responses associated with poor outcomes. Importantly, this work is also not covered by existing CEPI funding and fills a critical gap for vaccine development. Assays for these immune responses will be developed and used in animal vaccination studies and the human Phase I clinical trial. By directly comparing correlates of protection in natural infection with immune responses in the Phase I trial we will be able to optimise the vaccine dose and type of adjuvant to (i) ensure safety, (ii) elicit protection, and (iii) decrease antigen dose to inform future clinical or emergency use. MRF9200006	Coronavirus Research Response	2020 Tracking COVID-19 in Australia Using Genomics	University of New South Wales	University	NSW	Tracking COVID-19 using genomics	Pathogen genomics is a way of telling how the SARS-CoV-2 virus (which causes COVID-19) from one person is different from or similar to the SARS-CoV-2 viruses from other people. It is an important tool that can be used to understand the spread and evolution of the virus causing COVID-19 with the precision of specialty laboratory work including next-generation sequencing technology and advanced computing bioinformatics analyses. This project will be done by leading experts from around Australia, as part of the Communicable Diseases Genomics Network (CDGN). This is a genomics-focused network consisting of leading genomics laboratories across Australia. The use of COVID-19 pathogen genomics will provide insights into how virus moves from person to person (transmission) to help public health agencies better understand, track, and trace the transmissions of COVID-19, to reduce virus spread. This will become increasingly important as restrictions relax, and the Australian population returns to 'normal' activity. MRF2005845	Coronavirus Research Response	2020 COVID-19 Vaccine Candidate Research (Round 1)	University of Sydney	University	NSW	Novel DNA based COVID-19 vaccine: A phase 1/1b trial for Australia	This phase 1/1b clinical COVID-19 vaccine trial aims to assess the safety and immune responses of a candidate DNA vaccine made by Bionet-Asia. 150 healthy volunteers aged 18 to 75 will be invited to participate. This is a partnership with 4 of Australia's most experienced academic vaccine trial sites, who form an Alliance, known as Vax4COVID and Bionet Asia. If successful larger phase 2 trials will follow. This trial is an important contribution to our goal of developing a COVID-19 vaccine.	Associate Professor Nicholas Wood	Associate Professor Nicholas Wood, Associate Professor Peter Richmond, Professor Helen Marshall, Doctor Anita van den Biggelaar, Professor Dominic Dwyer	Targeted competitive	1/10/2020	31/05/2024	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Infectious diseases	Clinical Medicine and Science Research	$ 2,954,760.00	Prior to 03/09/2024
RRCSA000014	Coronavirus Research Response	2020 Communication Strategies and Approaches During Outbreaks	Monash University	University	VIC	Effectiveness of tailored COVID-19 message for vulnerable Australians	Effective management of the COVID-19 pandemic in Australia requires the delivery of well-designed and relevant public health messages to all communities. This project will work with six of the most vulnerable Australian communities to ensure that suitable COVID-19 messages reach them. We will work to: 1) identify their COVID-19 information and communication needs; 2) co-design tailored communication strategies; and 3) evaluate the effectiveness of these communication strategies. This project will provide a better understanding of the unique COVID-19 information and communication needs of vulnerable Australian communities, and the materials required to ensure that no Australian is left behind in the effort to reduce the spread of COVID-19.	Professor Terry Haines	Not available	Open competitive	1/02/2021	30/09/2022	Not available	Not available	$ 315,961.00	Prior to 03/09/2024
RRCSA000080	Coronavirus Research Response	2020 Communication Strategies and Approaches During Outbreaks	Deakin University	University	VIC	Inclusive Health Communication in Specialist Disability Accommodation	Written and spoken health information is inaccessible for many people with intellectual disability. Building on our extensive work in inclusive communication, this study will identify communication priorities and effective supports for people with intellectual disability living in high risk specialist disability accommodation (SDA) during disease outbreaks. Using observations, interviews and a literature synthesis we will evaluate current engagement with COVID-19 messaging in SDA settings. A modified Delphi study will identify public health communication priorities and effective supports for this community across broader health and human service contexts, informing a scalable SDA communication strategy for public health events.	Doctor Kate Anderson	Not available	Open competitive	1/02/2021	31/10/2022	Not available	Not available	$ 109,047.00	Prior to 03/09/2024
RRCSA000020	Coronavirus Research Response	2020 Communication Strategies and Approaches During Outbreaks	Macquarie University	University	NSW	Harnessing the health communication power of the early childhood sector	This project investigates the quality and effectiveness of public health information used and communicated by the early childhood education (ECE) sector during the COVID-19 pandemic. A mixed method design will investigate how the ECE workforce accessed and communicated COVID-19 health information to families and staff, and examine the impact of attitudinal, behavioural and demographic characteristics on how information was sourced, interpreted and communicated. Findings will inform Best Practice Health Communication Guidelines and Recommendations to support the collective efforts of the health and ECE sector deliver a rapid and effective health communication response to future events that threaten the health of families and their educators.	Professor Sheila Degotardi	Not available	Open competitive	1/02/2021	30/06/2022	Not available	Not available	$ 174,992.00	Prior to 03/09/2024
RRDHI000011	Coronavirus Research Response	2020 Rapid Response Digital Health Infrastructure	University of Sydney	University	NSW	Integrating remote monitoring technology into digital health infrastructure	We aim to improve the quality, safety and efficiency of remote patient monitoring in virtual hospitals using the experience of Sydney Local Health District's rpavirtual with pulse oximetry in COVID-19 patients. It is currently impossible to transfer data automatically from home devices to the CERNER Millennium electronic medical record (eMR). We will: (1) study the use and performance of pulse oximeters and their acceptability to staff and patients, and explore improvements; (2) develop and implement an application programming interface (API) to transfer pulse oximetry data to the eMR and a clinical interface for data extraction from the eMR; and (3) assess potential future applications of pulse oximeters. Results will apply Australia-wide.	Professor Andrew Wilson	Not available	Open competitive	12/04/2021	7/10/2022	Not available	Not available	$ 670,406.00	Prior to 03/09/2024
RRDHI000088	Coronavirus Research Response	2020 Rapid Response Digital Health Infrastructure	Monash University	University	VIC	Towards a national data management platform and Learning Health System	The Data Management Platform underpins the Learning Health System developed across NHMRC accredited Research Translation Centres nationally, with increased urgency under COVID-19. We draw on joint priorities, sustained investment and partnership across acute, ambulatory, primary and aged care services, government, industry and academia. Work packages include: governance, stakeholder and community engagement; data management processes, ethics, governance and consent; digital health tool co-development and adaption; data management pipeline co-development; digital tool implementation and integration; clinical trial cohort identification. Improved data management enables greater responsiveness to acute crises, recovery and beyond. MRF2007147	Coronavirus Research Response	2020 COVID-19 Vaccine Candidate Research (Round 2)	University of South Australia	University	SA	Accelerated clinical development of a next generation COVID-19 vaccine using the established Sementis Copenhagen Vector platform system	In response to the global COVID-19 pandemic, the WHO have outlined the need for vaccines which can address outbreaks, and provide population scale vaccination for the longer term. Our COVID-19 vaccine, based on a novel next-generation non-replicating viral vector vaccine technology, is advanced in development, and designed to deliver safe, broad, and long-lasting immunity. It can be produced economically and at scale to support these large-scale national and global vaccination programs.	Professor John Hayball	Professor John Hayball, Mr Peter Wulff, Doctor Paul Wabnitz	Targeted competitive	1/03/2021	30/06/2024	MEDICAL AND HEALTH SCIENCES, Immunology, Applied immunology (incl. antibody engineering, xenotransplantation and t-cell therapies)	Clinical Medicine and Science Research	$ 2,983,909.00	Prior to 03/09/2024
MRF2009092	Coronavirus Research Response	2020 Stem Cell Therapies Mission	The Commonwealth Scientific and Industrial Research Organisation	Corporate Commonwealth entity	ACT	The sySTEMs initiative: systems biology-augmented, stem cell-derived, multi-tissue panel for rapid screening of approved drugs as potential COVID-19 treatments	Vaccines alone can't stop COVID-19 infections; we also need safe, effective and affordable COVID-19 treatments urgently. A great strategy is to repurpose drugs already approved for other diseases. To do that we need rapid, high-throughput drug screening in relevant tissues grown from 'stem cells'. However, this system needs improvement in its readouts, reproducibility and clinical correlation. We intend to achieve this and screen the 3 most promising repurposed drug candidates within a year.	Alexander McAuley	Alexander McAuley, Doctor Nathan Godde, Doctor Carmel O'Brien, Doctor Nagendrakumar Singanallur Balasubramanian, Doctor David Beale, Professor Eugene Athan, Doctor Kim Blasdell, Doctor Rohitash Chandra, Doctor Laurence Wilson, Anu Kumar, Murugesan Sankaranarayanan, James Hudson, Moana Simpson	Targeted competitive	1/06/2021	31/10/2022	BIOLOGICAL SCIENCES, Biochemistry and cell biology, Systems biology	Basic Science Research	$ 998,355.93	Prior to 03/09/2024
MRF2013957	Coronavirus Research Response	2020 COVID-19 Vaccine Candidate Research (Round 3)	University of Melbourne	University	VIC	AdaptiVax-CoV: A novel adaptable SARS-CoV2 VLP vaccine to produce broad humoral and T cell responses to S, E and M viral proteins	In response to the COVID-19 pandemic over 20 vaccines are in clinical trials to test if these 'first generation' vaccines are safe and effective. However, whilst these vaccines may prove to be efficacious, they will only produce limited immune responses that will fail to protect against emerging coronaviruses. Accordingly, we have developed a significantly novel vaccine candidate that will produce broadly protective responses not only for COVID-19 but also future coronavirus global threats.	Professor Joseph Torresi	Professor Joseph Torresi, Professor William Heath, Professor Elizabeth Vincan, Professor Jason Mackenzie, Professor Marc Pellegrini, Doctor Tim Adams, Doctor Peter Kelly, Professor Graham Le Gros	Targeted competitive	1/06/2021	31/12/2023	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Infectious diseases	Clinical Medicine and Science Research	$ 2,999,862.00	Prior to 03/09/2024
MRF2013870	Coronavirus Research Response	2020 COVID-19 Vaccine Candidate Research (Round 3)	University of Melbourne	University	VIC	Chimeric next generation COVID vaccines	New COVID vaccines to combat newly emerging strains are needed. However, simply remaking current vaccines with the new strains might not work since those vaccines are likely to boost only the same responses to the original strain, not make new immunity to the new strain. We have developed a "CTR" COVID vaccine platform that we will assess for "focussing" of immunity to the new strain. Our goal is to induce immunity that "future proofs" against the threat of newly emerging SARS-CoV-2 strains.	Professor Stephen Kent	Professor Stephen Kent, Professor Trent Munro, Professor Kanta Subbarao, Jason Lickliter, Doctor Adam Wheatley, Doctor Jennifer Juno, Associate Professor Wai-Hong Tham, Doctor Kylie Quinn, Doctor Hyon Xhi Tan, Doctor Ben Hughes	Targeted competitive	1/06/2021	31/05/2024	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Infectious diseases	Clinical Medicine and Science Research	$ 3,000,000.00	Prior to 03/09/2024
MRF9002073	Coronavirus Research Response	2020 Antiviral Development for COVID-19	University of Melbourne	University	VIC	Biologics for the prophylaxis and treatment of COVID-19	Agents for treatments and prevention of COVID-19 infection are urgently needed. Antibodies are widely used to treat several infectious diseases, as well as autoimmune diseases and cancer. Using novel antibody discovery platforms and high-throughput screening approaches, our team of academic and industry partners is uniquely positioned to accelerate the discovery of an effective and safe antibody-based therapy to combat the new pandemic coronavirus.	Doctor Wai-Hong Tham	Associate Professor Wai-Hong Tham, Professor Stephen Kent, Doctor Mark Liddament, Mr Peter Smith, Doctor Adam Wheatley, Doctor Amy Chung, Professor Dale Godfrey, Professor Mark Hogarth, Professor Miles Davenport, Doctor Daniel Layton	Targeted competitive	1/10/2021	29/09/2025	Not available	Not available	$ 5,000,000.00	Prior to 03/09/2024
MRF2015305	Coronavirus Research Response	2021 COVID-19 Vaccine-Associated Thrombosis With Thrombocytopenia Syndrome	Monash University	University	VIC	A national, multi-centre study evaluating Thrombotic Thrombocytopenia Syndrome (TTS) associated with ChAdOx1 (AZD1222) and other SARS-CoV-2 vaccines (viral vector and m-RNA)	A condition of a blood clot with low platelets has been described in some patients after receiving COVID-19 vaccines, including the widely available ChAdOx-1 vaccine. Known as thrombosis with thrombocytopenia syndrome (TTS), this condition presents with a wide spectrum of severity. Although it has an immunological basis, the underlying mechanisms is unknown and there are no known predictors for increased risk of TTS. Further understanding is needed to ensure safe COVID-19 vaccination. MRF2015317	Coronavirus Research Response	2021 COVID-19 Health Impacts and Vaccination Schedules	University of Melbourne	University	VIC	Predicting the neurological impact of SARS-CoV-2 Variants of Concern-protecting Australians from long-COVID brain injury	As vaccination reduces the risk of death from SARS-CoV-2 infection, living with COVID-19 will require accepting that mild infection in vaccinated individuals will have an economic and health cost. Living with COVID-19 will require living with variants of concern of SARS-CoV-2 that evolve with time. Our focus will be to understand how SARS-CoV-2 variants affect the brain and develop a diagnostic test to identify patients at risk of chronic and debilitating brain injury from SARS-CoV-2 variants.	Associate Professor Victoria Lawson	Associate Professor Victoria Lawson, Doctor Julie McAuley, Professor Damian Purcell, Professor Andrew Hill, Doctor Lesley Cheng, Professor Steven Collins, Professor Sharon Lewin	Targeted competitive	1/01/2022	31/12/2025	MEDICAL AND HEALTH SCIENCES, Medical microbiology, Medical virology	Clinical Medicine and Science Research	$ 1,776,244.02	Prior to 03/09/2024
MRF2015313	Coronavirus Research Response	2021 COVID-19 Health Impacts and Vaccination Schedules	University of New South Wales	University	NSW	Comparing Immunisation-boosting Regimens for COVID-19 Upon Initiation of immunosuppressive Therapies (CIRCUIT Study)	We will determine the optimal timing of 3rd dose "booster" COVID-19 vaccines in previously fully-immunised patients who are commencing new immunosuppression for either a haematological malignancy or autoimmune/inflammatory condition. We will measure COVID-19 specific antibody levels over a 1 year follow-up period and determine the difference between the booster being administered immediately prior to starting immunosuppressive therapy or at 6 months after commencing immunosuppression.	Doctor Sarah Sasson	Doctor Sarah Sasson, Professor Anthony Kelleher, Associate Professor Kathy Petoumenos, Professor Miles Davenport, Professor Judith Trotman, Associate Professor Fabienne Brilot, Associate Professor Stuart Turville, Associate Professor Nada Hamad, Associate Professor Rowena Bull, Professor Golo Ahlenstiel	Targeted competitive	1/01/2022	31/12/2026	MEDICAL AND HEALTH SCIENCES, Immunology, Humoural immunology and immunochemistry	Clinical Medicine and Science Research	$ 2,752,966.61	Prior to 03/09/2024
MRF2014921	Coronavirus Research Response	2021 COVID-19 Health Impacts and Vaccination Schedules	Monash University	University	VIC	Bringing Optimised COVID-19 vaccine Schedules To ImmunoCompromised populations (BOOST-IC)	COVID-19 vaccines prevent severe disease from SARS-CoV-2 infection but there are groups with poor immune systems due to their medical conditions at increased risk for severe disease despite being vaccinated. We will perform a clinical trial of different strategies of booster doses of mRNA COVID-19 vaccines in immunocompromised people. This will establish which boosting strategies, with one or two extra doses and the interval between those doses, are safe and the most protective from infection. MRF2041199	Early to Mid-Career Researchers	2024 Early to Mid-Career Researchers	University of Western Australia	University	WA	Do behaviours modify the effectiveness of myopia control treatments?	Increasing short-sightedness is a major concern among children and adolescents. Treatments to prevent short-sightedness worsening exist, but during the COVID-19 pandemic, when people spent more time indoors and on devices, their effectiveness appeared to reduce. By measuring outdoor and near work behaviours in Australian young people receiving a myopia control treatment, we will identify the outdoor time/near work balance required to maximise the benefits of treatment, improving vision outcomes. MRF1162217	Emerging Priorities and Consumer Driven Research	2018 Accelerated Research - Priority-driven Collaborative Cancer Research Scheme - All Cancers	University of Melbourne	University	VIC	Role of the NKp44-PDGF-DD axis in Glioblastoma	Glioblastoma (GBM) is the most common primary malignant brain tumour, carrying an extremely poor prognosis. This Activity is a study that will investigate and evaluate the potential to utilise the immune response to improve detection of, and possibly inhibit, the growth of GBM tumours. Using publicly available databases, the researchers of this project have discovered that a gene for a receptor expressed by important immune cells called Natural Killer (NK) cells is associated with the improved survival of some patients with brain cancer. This project will seek to confirm that this receptor is expressed as a protein and how it signals the NK cells from these cancers, which then could be used to inform how to target this special pathway to treat patients with brain cancer. This work represents an essential step towards the development of immunotherapeutic strategies designed to specifically target pathways of growth factor immunosurveillance in disease. The project aims to provide an essential step towards development of novel Chimeric Antigen Receptor –T-Cell (CAR-T) based immunotherapeutic strategies designed to target cancers that over-express growth factors. EPCD000025	Emerging Priorities and Consumer Driven Research	2018 Accelerated Research - Sanfilippo Syndrome	Sanfilippo Children's Foundation (NSW)	Corporation	NSW	Development of a personalised medicine approach for Australian children with Sanfilippo Syndrome (MPS III) utilising patient specific neuronal cell models	Every year in Australia, approximately 5 children are born with Sanfilippo Syndrome. When diagnosed, often years later, they and their families are confronted with the realisation of an incurable, terminal disease and the burden of a progressive neurological disorder which robs them of their physical and cognitive abilities, resulting in premature death by adolescence or early adulthood. The physical, emotional, social and financial toll on these families is extreme and the burden to Australian Health services significant. This project provides an opportunity for life changing discoveries to significantly improve outcomes for Sanfilippo patients and their families, while strengthening the domestic research capacity and positioning Australia as a global leader in health and medical research. This project will apply pioneering medical breakthroughs to revolutionise pipelines for individualised therapeutic strategies in rare disease, improve clinical and economic efficiencies within the already burdened health system, and address a significant unmet need in the rare disease field. Patient-specific neurological disease models will be created and used to identify individualised therapies for Australian children with Sanfilippo Syndrome. It will accelerate medical research towards effective treatments for children with Sanfilippo Syndrome by: developing multi-purpose, functional neuronal cell models of Sanfilippo from individual patient's cells ("brain in a dish"); screening existing drugs that can be repurposed for Sanfilippo; supporting 'fast-track' translation of targeted and individualised therapies to clinical trial (critical given the progressive disease course); establishing a collaborative network of expertise for Sanfilippo and building leading scientific capabilities in Australia.	Not applicable	Not available	One-off/ad hoc	18/02/2019	31/08/2023	Not available	Not available	$ 2,000,000.00	Prior to 03/09/2024
EPCD000044	Emerging Priorities and Consumer Driven Research	2018 Accelerated Research - Stem Cells	University of Melbourne	University	VIC	Stem Cells Australia: translating stem cell research to medical application	Stem cell science has now advanced to the stage where it can be used to develop and test the effectiveness and safety of new gene therapies and drug treatments and also now offers novel ways to repair parts of the body through stem cell therapy. This research program aims to deliver novel stem cell based approaches to preventing or treating genetic defects that cause blindness and pioneering new approaches for the treatment of congenital heart disease. It will also support ongoing research programs aimed at developing new therapies for diseases such as Parkinson's disease, stroke, chronic kidney disease and dementia.	Not applicable	Not available	One-off/ad hoc	25/07/2018	31/12/2021	Not available	Not available	$ 3,000,000.00	Prior to 03/09/2024
EPCD000023	Emerging Priorities and Consumer Driven Research	2018 Accelerated Research - Neurological (Epilepsy Foundation)	Epilepsy Foundation (VIC)	Corporation	VIC	The Australian Epilepsy Research Fund	The Epilepsy Foundation has a commitment to supporting innovation and excellence in medical research. To this end, the Foundation has established the Australian Epilepsy Research Fund, launched in March, 2018. This grant represents the inaugural round of funding to be allocated through the Australian Epilepsy Research Fund (AERF). This funding will be allocated specifically to research aimed at finding a cure for rare genetic epilepsy disorders. We believe that research into rare genetic disorders and the opportunities afforded by increasing our knowledge of precision medicine are key emerging health priorities and also represent areas of current unmet need. Australia has contributed enormously to global efforts in unravelling the genetic and cellular basis of brain disorders. There is now an immediate opportunity to advance this knowledge towards clinical benefit. Investment in a specialised research program that focusses on pre-clinical development of diagnostics and therapeutics is required. Such activity is occurring sporadically across the nation but the lack of co-ordinated activity and sufficient funding base results in inefficient workflows, slowing the delivery of outcomes. The Epilepsy Foundation will manage the AERF and ensure that the funding is allocated to high quality research projects, and high quality researchers. To this end, the Foundation has engaged with some of the leading epilepsy researchers in Australia to form a governing committee for the AERF. This committee will determine how the funding acquired through this grant will be allocated. To date, $500,000 has been granted for a project on precision medicine in Syngap-1-related disorders, to be run by Professor Steven Petrou from the Florey Institute of Neuroscience. This project provides a clear example of the type of high quality projects that will be funded by the AERF and establishes a template for how projects will be chosen and assessed. EPCD000041	Emerging Priorities and Consumer Driven Research	2018 Accelerated Research - Motor Neuron Disease	Cure for MND Foundation	Corporation	VIC	National MND Precision Medicine and Clinical Trials Pipeline	The National MND Precision Medicine and Clinical Trials Pipeline will fund two phases: 1. Establish a Precision Medicine Program (PMP) for MND. Around 200 Australian MND patients will donate blood and tissue samples to generate innovative stem cell-based motor neurons to model MND "in the dish". These samples will be analysed and defined at a clinical, genetic, molecular, protein and metabolic level to improve disease classification of patients and encourage better selection and stratification of patients for enrolment in clinical trials, guided by disease signatures and favourable responses to drug screens. 2. Fund further multi-state clinical trials for MND, repurposing an existing drug to increase the number of patients able to access trials. Through competitive tender, a Clinical Research Organisation (CRO) will be identified to administer the trial in conjunction with principal clinical investigators. Up to a further 100 Australian MND patients will participate in the trial.	Not applicable	Not available	One-off/ad hoc	6/08/2018	30/06/2024	Not available	Not available	$ 6,000,000.00	Prior to 03/09/2024
EPCD000026	Emerging Priorities and Consumer Driven Research	2018 Accelerated Research - Microbiome	St George and Sutherland Medical Research Foundation	Corporation	NSW	Studies on the role of the gut microbiome in health and disease	The project includes two linked studies that aim to put Australia at the forefront of research in the microbiome field. The first study aims to define the optimal Australian gut microbiome. We will study three groups: healthy elite athletes, healthy physically active lean individuals and healthy centenarians. The outcomes will include (1) the provision of a multi-omic healthy gut microbiome signatures (fingerprints) for use as a reference by all researchers in Australia and beyond, (2) defining of parameters for manipulation of a diseased microbiome and (3) providing a bank of the healthiest stool that could be used for faecal microbiota transplantation (FMT) and potential treatment of patients with various diseases. The second study (MothersBabies) aims to study the role of the microbiome in pregnancy and its outcomes in the mothers and their babies. It is unique in starting at the preconception stage and following women for up to a year postpartum and their babies for the first few years of life. The study outcomes will include: (1) defining signatures of outcomes of pregnancy e.g. healthy, preeclampsia, diabetes, obesity, etc; (2) constructing multi-omic predictive signatures based on preconception microbiome; (3) using these predictive signatures to design studies aimed at pre-emptive manipulation of the microbiome at the pre-conception stage; (4) conducting the largest clinical trial designed to test the role of pre-emptive manipulation of the microbiome in pregnancy for the purpose of prevention of negative outcomes. This study will be a national treasure for Australia and for humanity.	Not applicable	Not available	One-off/ad hoc	1/01/2019	30/12/2022	Not available	Not available	$ 2,000,000.00	Prior to 03/09/2024
ARG76435	Emerging Priorities and Consumer Driven Research	2019 Accelerated Research - Australian National Phenome Centre	Murdoch University	University	WA	Australian National Phenome Centre (Murdoch University) - Support for Establishment and Sustainability of Critical Infrastructure to Provide Transformational Phenomics Capcity for Australian Medical Research	The Australian National Phenome Centre (ANPC) vision is to create a world-class phenome centre, with strong global connections, directly supporting the development of precision medicine by the Australian research community. The project ensures that the Clinical and Population Health Division of the ANPC can be established at a scale which will support phenomic capacity keeping pace with genomic capacity in Australia, leveraging the significant investment being made in genomics. The potential benefits of combined omics analysis, such as cross-integration of genomic and metabolic phenotype data, are vast and exciting. The project supports acquisition of key scientific equipment for the ANPC which, together with the support provided by Murdoch University to the ANPC, will allow for the ANPC to be sustainable. EPCD000042	Emerging Priorities and Consumer Driven Research	2018 Accelerated Research - Rare Cancers	Olivia Newton-John Cancer Research Institute	Medical Research Institute	VIC	Expanding access to a phase II trial evaluating combination immunotherapy for treatment of rare gastrointestinal, neuroendocrine and gynaecological cancers for rural/regional and metropolitan patients	This project will support rare cancer research through expansion of a current clinical trial. The trial combines a new immunotherapy combination of ipilimumab and Nivolumab (ipi/nivo) drugs in patients with rare gastrointestinal, neuroendocrine and gynaecological cancers. The project will enable an additional 60 patients, including those located in rural/regional areas with rare cancers, to join the trial.	Not applicable	Not available	One-off/ad hoc	25/01/2019	31/12/2021	Not available	Not available	$ 1,000,000.00	Prior to 03/09/2024
EPCD000029	Emerging Priorities and Consumer Driven Research	2018 Accelerated Research - Bone Marrow Failure Syndromes	Maddie Riewoldt Holdings Limited	Corporation	VIC	Clinical trials capacity building for patients with Bone Marrow Failure Syndromes in Australia	Following the establishment of critical foundations and the management of this through the Centre of Research Excellence in Bone Marrow Biology, Maddie's Vision now seeks to further leverage this talent pool and the research findings. The next stage is to develop clinical trial participation through a specific research funding pool directed at clinical research capacity within bone marrow failure syndromes. Enhanced clinical trial capacity in this much needed field of research will present opportunities to bring clinical trials from international centres to Australia through seed funding to support such facilities: research nurses, key clinical trial infrastructure, statistical support and/or to add value to existing clinical trials through the collection and analysis of correlative samples. Specific funding directed for these currently existing opportunities will facilitate the final piece of the Maddie's Vision research strategy. That is, basic science, translational and clinical trial coordinated.	Not applicable	Not available	One-off/ad hoc	23/01/2019	30/06/2023	Not available	Not available	$ 1,000,000.00	Prior to 03/09/2024
EPCD000033	Emerging Priorities and Consumer Driven Research	2019 Accelerated Research - Drug Discovery Centre	The Walter and Eliza Hall Institute of Medical Research	Medical Research Institute	VIC	National Drug Discovery Centre	The Walter and Eliza Hall Institute of Medical Research is expanding its early stage drug discovery capacity to dramatically increase the capacity for Australian researchers to undertake high throughput screening – a critical step in the translation of biomedical research discoveries into new drugs. This investment in the National Drug Discovery Centre will fill a known gap in the drug discovery pipeline in Australia and improve the translation of Australia's world class basic research outputs into drugs to treat diseases and improve the quality of life across the community. This investment has the potential to increase the opportunities, benefits and commercial returns to the intellectual property arising from Australian research discoveries.	Not applicable	Not available	One-off/ad hoc	27/03/2019	31/12/2024	Not available	Not available	$ 25,000,000.00	Prior to 03/09/2024
4500124420	Emerging Priorities and Consumer Driven Research	2017 Accelerated Research - Teen Cancer Program	CanTeen	Corporation	NSW	The Australian Young Cancer Patient Clinical Trials Initiative	The purpose of the Accelerated Research Investment – Teen Cancer Program is to improve therapy and outcomes for Adolescents and Young Adult (AYA) cancer patients through new clinical trial activities for AYAs and greater access to innovative and cutting edge approaches with the aim of pursuing research breakthroughs. This will be achieved by providing funding to: increase the number of cancer patients participating in trials; manage the conduct of clinical trials for AYA cancer patients; and attract broader support for international collaboration on trial activity via co-funding models with other funders. EPCD000030	Emerging Priorities and Consumer Driven Research	2019 Accelerated Research – Stillbirth Research Project – Centre of Research Excellence in Stillbirth	The University of Queensland	University	QLD	Preventing stillbirth: the Australian Safe Baby Bundle	Stillbirth is far too common – six Australian babies are stillborn each day and the psychosocial and economic consequences for families, their care providers and the health system are profound. Women who live with social disadvantage are at heightened risk for stillbirth. Aboriginal and Torres Strait Islander women and women from other culturally and linguistically backgrounds are at particular risk. As many as one-third of stillbirths may be preventable and priorities for stillbirth prevention are clear. Substandard care practices are frequent contributors and ensuring that evidence-based practice is uniformly implemented in all maternity settings is critical to reducing stillbirth rates. The Safe Baby Bundle is Australia's first comprehensive response to this urgent public health issue. The goal is to reduce the rate of stillbirth and to make best care available to all women when stillbirth occurs.	Not applicable	Not available	One-off/ad hoc	1/04/2019	30/06/2023	Not available	Not available	$ 3,000,000.00	Prior to 03/09/2024
EPCD000019	Emerging Priorities and Consumer Driven Research	2018 Accelerated Research - Neurological (National Stroke Foundation)	National Stroke Foundation	Corporation	VIC	Australian Living Guidelines for Stroke Management and "Return to life, return to work": A targeted clinical research investment in stroke recovery for young survivors	The Living Clinical guidelines for Stroke Management project will draw on latest technologies and new ways of working to develop efficient 'evidence surveillance' systems. These systems will continually identify new research, incorporate this research into living systematic reviews and rapidly update individual guideline recommendations whenever there is an important change in the evidence. The 'Return to life, return to work' package will focus on clinical trials of recovery and rehabilitation interventions for stroke survivors.	Not applicable	Not available	One-off/ad hoc	23/07/2018	30/06/2023	Not available	Not available	$ 2,500,000.00	Prior to 03/09/2024
EPCD000032	Emerging Priorities and Consumer Driven Research	2019 Accelerated Research - The Australian Parkinson's Mission	University of New South Wales	University	NSW	The Australian Parkinson's Mission: Integrating genomics, biomarkers and patient cell phenotyping into disease modifying clinical trials to identify therapeutics to slow or stop disease progression	The Australian Parkinson's Mission (APM) aims to identify therapies that will slow or stop disease progression in people with Parkinson's disease (PD). APM is a collaborative of scientists, clinicians, pharma, and people with PD whose goal is to determine the causes of PD, identify effective therapeutics and fast track them to people with Parkinson's. To accomplish this, the five year project will employ a unique model of inter-connected and mutually reinforcing clinical trials, genomics and biomarker development and phenotyping of patient derived stem cells. A series of multi-arm, multi-drug clinical trials involving hundreds of patients will be conducted at multiple sites across Australia to test repurposed and new drugs that have been prioritised for testing by an international panel of PD experts. Blood RNA and metabolite biomarkers will be identified for their ability to accurately diagnose patients and detect drug efficacy with greater sensitivity than existing clinical measures.	Not applicable	Not available	One-off/ad hoc	1/04/2019	30/06/2025	Not available	Not available	$ 30,000,000.00	Prior to 03/09/2024

ARG76376	Emerging Priorities and Consumer Driven Research	2019 Accelerated Research - Phenomics Capability	Australian National University	University	ACT	Phenomics Capability (Australian National University): The Phenomics Translation Initiative	The Phenomics Translation Initiative will transform phenomics capability for the benefit of the nation; building on decades of investment at The Australian National University and collaborators across Australia to expand the pipeline of human genomics-to-phenomics discovery and innovation. Key project activities include scale-up of clinically-derived bespoke disease models; development of pathway- and drug-specific biomarkers and companion diagnostics; evaluation and selection of novel therapies for rare and debilitating conditions; and preparation for 'N-of-1' clinical trials for patient with rare genomic variations and phenotypic profiles. Outcomes include development of new disease models, novel diagnostics and better treatment options for patients globally with diseases that are currently chronic, debilitating and incurable. Understanding mechanisms of disease, personalising therapy, and developing more effective treatments will improve quality of life for all Australians.	Not applicable	Not available	One-off/ad hoc	1/04/2019	30/12/2024	Not available	Not available	$ 10,000,000.00	Prior to 03/09/2024
EPCD000018	Emerging Priorities and Consumer Driven Research	2018 Accelerated Research - Prostate Cancer	The Movember Foundation	Corporation	VIC	Prostate Cancer Research Alliance (PCRA) - An Australian Government and Movember Foundation Collaboration	The Australian Government and the Movember Foundation (Movember) will fund three high quality, collaborative, multi-disciplinary Australian research teams with the scientific and clinical expertise to carry out research projects with a potential for near-term, transformative impact on the clinical management of prostate cancer.	Not applicable	Not available	One-off/ad hoc	25/10/2018	30/04/2025	Not available	Not available	$ 6,018,000.00	Prior to 03/09/2024
EPCD000039	Emerging Priorities and Consumer Driven Research	2019 Accelerated Research - Malaria Vaccine Trial	Griffith University	University	QLD	A vaccine for malaria: An Australian concept and development strategy	This project will focus on the pre-clinical development of a world-first whole parasite blood-stage malaria vaccine. Malaria results in >200 million cases and 450,000 deaths/yr. With existing control measures becoming increasingly less effective, the development of an effective malaria vaccine is critical. A single sub-unit malaria vaccine has been licensed; however it provides moderate, short term protection only. By including blood-stage proteins from the whole parasite formulated within novel liposomes to optimise immunogenicity and enable development of a cryopreserved (field deployable) vaccine formulation, our vaccine will be game-changing. This project will focus on three activities pertaining to the development of a field-deployable P. falciparum whole parasite blood-stage malaria vaccine: further optimisation of the vaccine formulation and vaccination regimen in pre-clinical models of malaria, vaccine stability studies and establishment of critical GMP-compliant manufacturing processes and GMP-grade reagents for future clinical vaccine development.	Not applicable	Not available	One-off/ad hoc	30/06/2019	31/12/2022	Not available	Not available	$ 500,000.00	Prior to 03/09/2024
EPCD000006	Emerging Priorities and Consumer Driven Research	2019 Women in Sport	Victoria University	University	VIC	Changing Practice: Mental and Physical Health of Girls and Women	Despite the mental and physical, social, equity and economic benefits associated with girls and women involved as leaders and participants in sport, women are largely under-represented in leadership positions and fewer females participate in sport than males. The aim of this research is to change practices and increase the number of women and girls as leaders and participants in sport. The research will involve four sub-projects with separate aims: Aim 1: To identify factors to attract and retain women from CALD backgrounds as leaders in sport. Aim 2: To design and evaluate an intervention to change practices across sectors in the workplace to encourage more women in male-dominated leadership positions. Aim 3: To investigate community grass-roots sport participation for girls and women and their retention and drop-out patterns across the lifespan for two national sports. Aim 4: To collect comprehensive mental health and wellbeing data from women in semi and professional sports to assess and track mental health and evaluate existing initiatives.	Not applicable	Not available	One-off/ad hoc	29/01/2020	30/06/2023	Not available	Not available	$ 1,000,000.00	Prior to 03/09/2024
EPCD000008	Emerging Priorities and Consumer Driven Research	2019 Multiple Sclerosis (MS) Flagship	University of Tasmania	University	TAS	The Multiple Sclerosis (MS) Flagship	The goal of the Menzies Institute for Medical Research Multiple Sclerosis (MS) Flagship is to perform high–quality, interdisciplinary, and consumer–engaged research designed to reduce the impact of MS on individuals, their families and society. To this end, this MRFF opportunity will support the MS Flagship to establish a stem cell bank designed to advance MS research, and support laboratory research into brain function, myelin repair, and the genes that underpin MS risk. They will also partner with consumers and stakeholders to develop an economic model to identify cost–effective treatments and interventions for MS, and develop education tools and online resources for people living with MS, including a symptom management App.	Not applicable	Not available	One-off/ad hoc	6/02/2020	30/06/2024	Not available	Not available	$ 10,000,000.00	Prior to 03/09/2024
EPCD000005	Emerging Priorities and Consumer Driven Research	2019 Lung Cancer Genomics	Australian Genomic Cancer Medicine Centre Ltd	Corporation	NSW	ASPIRATION: assessing the impact of genomic profiling in lung cancer	There are several well-established, and an increasing number of, genomic alterations in metastatic non-squamous non-small cell lung cancer (mNSCLC) that are not adequately identified by current diagnostic testing. Comprehensive genomic profiling (CGP) has the capacity to identify actionable genomic alterations missed by current testing, potentially allowing patients to access personalised treatment with emerging targeted drugs currently available or in development. The ASPIRATION study will evaluate the clinical impact of CGP on the management of mNSCLC and assess the feasibility of implementation of CGP nationally.	Not applicable	Not available	One-off/ad hoc	5/02/2020	31/12/2024	Not available	Not available	$ 5,000,000.00	Prior to 03/09/2024
EPCD000002	Emerging Priorities and Consumer Driven Research	2019 Autism Spectrum Disorder	Monash University	University	VIC	Autism Spectrum Disorders and Comorbid Disorders: Diagnosis and Treatment	Autism spectrum disorders (ASDs) are persistent neurodevelopmental conditions that frequently co-occur with other conditions such as ADHD. This comorbidity necessitates the identification of biomarkers across the ASD-ADHD spectrum that may aid differential diagnosis or lead to the identification of novel treatment options. This project will: (1) establish a landmark cohort of 1200 families across the ASD-ADHD spectrum and use cutting edge data science to identify novel subgroups; (2) use brain imaging to understand common and unique brain signatures; (3) apply cutting-edge genomics to identify common and unique genetic signatures; (4) implement a novel cognitive training programme to boost attention and executive function. MRF1200214	Emerging Priorities and Consumer Driven Research	2019 Endometriosis Research	Deakin University	University	VIC	A Randomized Controlled Trial Comparing Yoga, Cognitive Behaviour Therapy and Education to Improve Quality of Life and Reduce Healthcare Costs in Endometriosis	Endometriosis is a chronic inflammatory disease afflicting 700 000 Australians. In addition to pain, common symptoms include fatigue, anxiety, depression, and poor quality of life (QoL). Consistent with the National Action Plan for Endometriosis (NAPE) focus on improving QoL, this project will examine two mind-body interventions designed to enhance the mind's positive impact on the body in order to improve patient QoL. This trial aims to use gold-standard methodology to test whether one of the most popular treatments for chronic pain (yoga), and the most prescribed psychological therapy for chronic pain (to cognitive behaviour therapy), really do address the debilitating symptoms of endometriosis, to potentially alleviate the suffering of thousands of Australians.	Doctor Subhadra Evans	Doctor Subhadra Evans, Associate Professor Antonina Mikocka-Walus, Associate Professor Jennifer Watts, Professor Adrian Esterman, Doctor David Skvarc	Targeted competitive	1/06/2020	31/12/2025	MEDICAL AND HEALTH SCIENCES, Other medical and health sciences, Medical and health sciences not elsewhere classified	Clinical Medicine and Science Research	$ 893,981.25	Prior to 03/09/2024
MRF1200392	Emerging Priorities and Consumer Driven Research	2019 Endometriosis Research	Monash University	University	VIC	Creating an evidence base for clinical care: A randomized controlled study examining the efficacy of the low FODMAP diet for the relief of gastrointestinal symptoms in endometriosis	Endometriosis is a common condition affecting up to 10% of women of reproductive age. Gastrointestinal (GI) complaints are common, affecting up to 90% of patients. There is large overlap between GI symptoms seen in irritable bowel syndrome (IBS) and endometriosis. Effective therapies are available for patients with IBS, with the low FODMAP diet, pioneered by our center, now first line. However, there is limited information as to whether it is helpful in patients suffering from similar GI symptoms secondary to endometriosis. The current project seeks to explore: 1) if low FODMAP diet therapy is effective in treating GI symptoms associate with endometriosis, 2) the potential role gut and vaginal microbiota plays in GI symptoms associated with endometriosis, 3) clinical, physiological and psychological parameters in patients with endometriosis associated with the presence of GI symptoms.	Associate Professor Jane Muir	Associate Professor Jane Muir, Doctor Rebecca Burgell, Doctor Jane Varney, Doctor Judith Moore, Professor Mark Morrison, Professor Jane Fisher	Targeted competitive	1/06/2020	31/12/2025	MEDICAL AND HEALTH SCIENCES, Nutrition and dietetics, Nutrition and dietetics not elsewhere classified	Clinical Medicine and Science Research	$ 948,619.20	Prior to 03/09/2024
MRF1201159	Emerging Priorities and Consumer Driven Research	2019 Endometriosis Research	Murdoch Children's Research Institute	Medical Research Institute	VIC	Long STEPPP-A Longitudinal Study of Teenagers with Endometriosis, Period and Pelvic Pain in Australia to identify early risk factors, educational and management strategies that will lead to optimal health outcomes and appropriate health utilisation	The Longitudinal Study of Teenagers with Endometriosis, Period and Pelvic Pain (LongSTEPPP-Australia) is novel project and the first of its kind due to its focus on adolescents, lending to the possibility of prevention of endometriosis through controlling pelvic pain and menstrual problems. There is limited education to ensure teenagers seek help for their period problems. This study intends to clarify through co-design the factors that are most important to teenagers; examine the impact of the various educational strategies by monitoring those areas where these programs are occurring; explore the psychosocial factors impacting on presentation and monitor management and health utilisation of teens presenting with endometriosis, period and pelvic pain to adolescent gynaecology units in public hospitals around Australia.	Professor Sonia Grover	Professor Sonia Grover, Professor Harriet Hiscock, Professor Catherine Bennett, Doctor Courtney Munro, Professor Andrew Chanen, Doctor Rebecca Deans, Doctor Julie Abimanyi-Ochom	Targeted competitive	1/06/2020	31/05/2026	MEDICAL AND HEALTH SCIENCES, Paediatrics and reproductive medicine, Obstetrics and gynaecology	Clinical Medicine and Science Research	$ 1,963,118.00	Prior to 03/09/2024
MRF1199715	Emerging Priorities and Consumer Driven Research	2019 Endometriosis Research	University of Melbourne	University	VIC	Improving diagnosis and treatment of endometriosis	We aim to improve the quality of life for all women living with endometriosis through research-driven improvements to diagnosis and treatment. Our proposal has 3 major themes, (1) Better diagnosis of initial and recurrent endometriosis, (2) Improved outcomes for women with endometriosis-related pain, and (3) Development of evidence-based pathways to treat endometriosis-related infertility. The three themes contain a powerful mixture of clinical trials and laboratory based discovery research that will lead to improved outcomes in conjunction with a better understanding of factors that lead to the development and progression of endometriosis.	Professor Peter Rogers	Professor Peter Rogers, Associate Professor Martin Healey, Doctor Sarah Holdsworth-Carson, Doctor Jacqueline Donoghue, Associate Professor Helena Frawley, Doctor Claudia Cheng	Targeted competitive	1/06/2020	31/05/2026	MEDICAL AND HEALTH SCIENCES, Paediatrics and reproductive medicine, Obstetrics and gynaecology	Clinical Medicine and Science Research	$ 3,929,233.50	Prior to 03/09/2024

MRF1199785	Emerging Priorities and Consumer Driven Research	2019 Endometriosis Research	The University of Queensland	University	QLD	Genetic variants, Early Life exposures, and Longitudinal Endometriosis Symptoms study (GELLES)	The Genetic variants, Early Life exposures, and Longitudinal Endometriosis symptoms Study (GELLES) takes an innovative approach to address the evidence gaps and the limitations of previous Endometriosis studies. GELLES will compare women with and without endometriosis and identify the combinations of factors and patterns of symptoms linked with increased risk of endometriosis and longer time to diagnosis. The study will produce high quality evidence and provide new insights on the causal pathways and aetiology of this disease. GELLES researchers will work with end-users to ensure the new knowledge benefits consumers, including improved information on endometriosis, a new clinical tool for health professionals to assess the risk of endometriosis, and clinical guidelines to reduce the time required for diagnosis and accessing treatment. MRF1200060	Emerging Priorities and Consumer Driven Research	2019 Mental Health Pharmacogenomics	University of Melbourne	University	VIC	The PRESIDE (PhaRmacogEnomicS In Depression) Trial: an RCT of pharmacogenomically-informed prescribing of antidepressants on depression outcomes in patients with major depressive disorder in primary care	Up to a half of patients with depression do not respond to their first antidepressant. This is partly due to genetic variation in the way people metabolise antidepressants. In this trial we will test the effect of using a genetic test to guide the choice and dose of antidepressant, comparing it with current best-practice prescribing. We will measure the effect of using this genetic test on improvement in symptoms of depression, reduced side-effects from antidepressants and healthcare costs.	Professor Jon Emery	Professor Jon Emery, Professor Jane Gunn, Doctor Chad Bousman, Doctor Patty (Panagiota) Chondros, Associate Professor Victoria Palmer, Professor Cathrine Mihalopoulos, Professor Timothy Chen, Doctor Thomas Polasek, Doctor Melanie Galea	Targeted competitive	1/06/2020	31/08/2025	MEDICAL AND HEALTH SCIENCES, Public health and health services, Primary health care	Clinical Medicine and Science Research	$ 1,390,401.00	Prior to 03/09/2024
MRF1200428	Emerging Priorities and Consumer Driven Research	2019 Mental Health Pharmacogenomics	University of New South Wales	University	NSW	A multifaceted approach to the pharmacogenomic signatures of bipolar disorder for improving treatment outcomes	Bipolar Disorder is a debilitating psychiatric condition for which treatment response and clinical course is highly variable. Advanced genomics and biomarker analysis of patients with linked health record data over 15 years will address key knowledge gaps in treatment response and long-term treatment outcomes of this chronic condition. This project will enhance capacity for personalised medicine and classify subgroups for improved treatment to reduce the significant burden of this disease. MRF2024316	Emerging Priorities and Consumer Driven Research	2022 Pancreatic Cancer Research	The University of Adelaide	University	SA	Faecal Microbiota Transplantation to improve pain, symptom management and treatment efficacy in patients with pancreatic cancer	Pancreatic cancer and its treatments (i.e. chemotherapy, surgery) cause pain and a range of gastrointestinal symptoms. Recent findings have shown that an imbalance in microbes living in the digestive system can lead to cancer, poor digestion and other gut issues. The current study will transfer micro-organisms from a healthy donor to a patient with pancreatic cancer to help restore appropriate digestion and alleviate pain and gastrointestinal discomfort. This project trials a modified intervention to treat mental health problems in this group. The intervention has been specifically tailored for this group through consultation with children, adolescents and their parents with lived experience of the conditions to ensure its suitability for this population.	Doctor Louise Crowe	Doctor Louise Crowe, Claire Burton, Doctor Edith Botchway, Mr James Williams	Targeted competitive	1/12/2024	30/11/2026	Pending	Pending	$ 792,029.89	
MRF2035991	Emerging Priorities and Consumer Driven Research	2023 Childhood Mental Health Research	University of Sydney	University	NSW	Innovation in the Assessment of Trauma and Adversity	For many children, experiences of trauma occur as a combination of multiple adversities referred to Adverse Childhood Experiences (ACEs). Practitioners have a need for clinical tools that are able to collect assessment information about developmental characteristics of ACEs, such as the ages at which they were experienced by children and their caregivers. This research will produce an innovative assessment tool for collecting such information in a way that is acceptable to diverse families.	Professor David Hawes	Professor David Hawes, Professor Angela Nickerson, Associate Professor Dave Pasalich, Doctor Carys Chainey, Doctor Caitlin Cowan	Targeted competitive	1/12/2024	28/02/2027	Pending	Pending	$ 972,912.00	
MRF2035977	Emerging Priorities and Consumer Driven Research	2023 Childhood Mental Health Research	Flinders University	University	SA	Trauma Aware School Village: Tackling Childhood Trauma In Schools	Trauma has a massive impact on children's mental health and education. Programs delivered in schools have the potential to address and prevent childhood trauma through training educators, but until now have lacked input from students and caregivers; and evidence supporting implementation of these programs remains scarce. This project will develop and test a whole-of-school community approach to trauma in children and schools, through co-design with children, caregivers, and educators.	Doctor Ben Lohmeyer	Doctor Ben Lohmeyer, Doctor Joel McGregor, Doctor Alhassan Abdullah, Associate Professor Sam Elliott, Mr Sean Lappin, Professor Damien Riggs, Doctor Peta Cook, Professor Melanie Takarangi, Doctor Deborah Batterham	Targeted competitive	1/12/2024	30/11/2026	Pending	Pending	$ 999,614.42	
MRF2035984	Emerging Priorities and Consumer Driven Research	2023 Childhood Mental Health Research	Monash University	University	VIC	Responding to adolescent school refusal with a novel online parenting intervention: Exploring the mediating role of parental factors	This project aims to evaluate a new online program for parents of teenagers (12-15 years) with difficulties attending school due to emotional distress ("school refusal"). We will evaluate whether the program can help parents feel more confident and support their child in ways that research shows can help their child's mental health and school attendance, and whether this in turn helps their child attend more school. The program fills a critical gap in services for families facing school refusal.	Doctor Mairead Cardamone-Breen	Doctor Mairead Cardamone-Breen, Professor Marie Yap, Emeritus Professor Anthony Jorm, Doctor Bei Bei, Doctor Anna Smout, Professor Patrick Olivier, Doctor Yong Yi Lee	Targeted competitive	1/12/2024	30/11/2027	Pending	Pending	$ 916,195.80	
MRF2036123	Emerging Priorities and Consumer Driven Research	2023 Childhood Mental Health Research	University of Sydney	University	NSW	Network for Coordinated Health-Education Interventions for Emotionally Based School Avoidance (NiCHE)	Emotionally-based school avoidance (EBSA) derails youth development, burdens families and places a huge cost on society. Since the COVID-19 pandemic, rates of EBSA appear to have risen dramatically. Delay in detection of emerging EBSA and ineffective treatments for severe EBSA each limit outcomes. This study trials a Hub and Spoke model of care to deliver intensive rehabilitation to adolescents with severe EBSA and to support schools in early detection of emerging EBSA. RFRHPI000024	Frontier Health and Medical Research	2021 Frontier Health and Medical Research	Synchron Australia Pty Ltd	Corporation	VIC	The Brain-Machine Interface Frontier: Pioneering Endovascular Bionics	In August 2019, we demonstrated the world's first successful implantation of an endovascular neural interface, pioneering a new field of medicine. Using blood vessels, we safely delivered our device to the brain in a paralysed patient. Within months, he was able to control a computer with his mind. We are now poised to complete transformation of our paradigm shifting research into a clinical product, and through development and implementation of stimulation capabilities, our endovascular device will become a globally recognised and internationally competitive platform across a broad range of neurological conditions.	Associate Professor Nicholas Opie	Not available	Open competitive	15/06/2021	14/09/2022	Not available	Not available	$ 996,000.00	Prior to 03/09/2024
RFRHPI000241	Frontier Health and Medical Research	2021 Frontier Health and Medical Research	Monash University	University	VIC	The Artificial Heart Frontiers Program	Over 23 million people suffer from heart failure around the globe, yet only six thousand a year receive a donor heart. Many patients turn to artificial hearts: large, noisy devices that too frequently fail, or confine the patient to hospital. Other patients have no options at all. Now, the Artificial Heart Frontiers Program will bring a new generation of artificial hearts to market. Our innovative implants are small, patient-friendly and reliable—outlasting all existing alternatives. They are powerful enough for an adult, yet small enough for a child. They are quiet, portable, and respond to active lifestyles, allowing patients to return to their families and jobs. This technology will revolutionise the lives of patients with heart failure.	Professor David Kaye	Not available	Open competitive	15/06/2021	14/09/2022	Not available	Not available	$ 999,570.00	Prior to 03/09/2024
RFRHPI000013	Frontier Health and Medical Research	2021 Frontier Health and Medical Research	University of Sydney	University	NSW	Australian Corneal Bioengineering: Novel Therapies to Fight Blindness	The cornea is the outermost structure of the eye. Disease or injury of the cornea, often leads to poor vision and in many cases, blindness. Corneal transplantation represents the current gold standard for the treatment of moderate to severe corneal disease. During corneal transplantation, donor corneas are used to replace the scarred or diseased tissue. However, only 1 cornea is available for every 70 potential patients globally representing a major ongoing concern. Our research group has established laboratory methods to create viable, bioengineered corneal tissue to replace donor corneas. With this grant, we aim to create a next-generation manufacturing facility to produce, store and allocate this tissue both locally and internationally.	Professor Gerard Sutton	Not available	Open competitive	15/06/2021	14/09/2022	Not available	Not available	$ 999,224.00	Prior to 03/09/2024
RFRHPI000017	Frontier Health and Medical Research	2021 Frontier Health and Medical Research	University of Sydney	University	NSW	Phage Australia	PHAGE AUSTRALIA: Integrating Australian Phage Biobanking and Therapeutic Networks and Delivering Solutions for Antimicrobial Resistance. Bacteriophage (phage) treatment offers a comprehensive solution to the problem of antimicrobial resistance. It is safer and more precise than antibiotics, with fewer side effects. Our primary goal is to establish bacteriophage therapy in a national framework of approved indications based on clinical trials and a sound understanding of the underlying biology. We will establish the supporting infrastructure for production, diagnostic support and clinical trials, linking academic, government and industry partners across Australia and overseas.	Professor Jonathan Iredell	Not available	Open competitive	15/06/2021	14/09/2022	Not available	Not available	$ 999,999.00	Prior to 03/09/2024
RFRHPI000269	Frontier Health and Medical Research	2021 Frontier Health and Medical Research	The Walter and Eliza Hall Institute of Medical Research	Medical Research Institute	VIC	Australian Centre for E3 Therapeutics (ACE3T)	An exciting new protein degrader (PD) technology purposefully redirects the cell waste machinery, driven by E3 proteins, to destroy a specified protein, for the first time accessing previously 'undruggable' targets. The Australian Centre for E3 Therapeutics (ACE3T) will enable Australian researchers to access this emerging disruptive technology, generating Australia-based inventions & kick starting a new biotech sector. Application of PD technologies will have a broad impact on streamlining future drug discovery campaigns. With an initial focus on cancer and building on the strength of the Australian research sector, the ACE3T will develop new anti-cancer drugs with improved efficacy and fewer side effects, saving & improving many lives. RFRHPI000210	Frontier Health and Medical Research	2021 Frontier Health and Medical Research	Snoretox Pty Ltd	Corporation	VIC	Novel, Innovative Modified Tetanus Toxin Drugs for Weak Muscle Conditions	There is no pharmacotherapy for disorders of low muscle tone or muscular flaccidity, such as obstructive sleep apnoea, urinary/faecal incontinence, pelvic floor weakness, MS and MND. Tetanus neurotoxin (TeNT) is related to Botulinum neurotoxin (e.g. Botox, BoNT), but has the opposite effect of increasing muscle tone. Unlike BoNT, TeNT has not been used in medical applications due to human vaccinations and immunity, until now. Snoretox is a treatment made through modification of TeNT, bypassing the human immune response, making it a world-first drug able to enhance motor function and overcome muscle weakness in vaccinated humans and animals. This project will allow us to conduct the necessary steps to bring this exciting product to market. RFRHPI000280	Frontier Health and Medical Research	2021 Frontier Health and Medical Research	University of New South Wales	University	NSW	EpiWatch – Artificial Intelligence Early-Warning System for Epidemics	If the catastrophic COVID-19 pandemic had been detected early in its genesis, before it had spread beyond Wuhan, it could have been stamped out entirely, and the pandemic prevented. Rapid epidemic detection is possible using algorithms and artificial intelligence to mine open source data, but has not been a focus of pandemic planning. We will develop a fully automated, intelligent system for rapid epidemic detection using open source data, building on a semi-automated prototype, Epiwatch. It will use AI, natural language processing, automated translation, report classification and prioritisation, risk analysis, geospatial information systems and a searchable user interface (Web and Apps). This will be a game changer in health security.	Professor Raina MacIntyre	Not available	Open competitive	15/06/2021	14/09/2022	Not available	Not available	$ 799,788.00	Prior to 03/09/2024
RFRHPI000147	Frontier Health and Medical Research	2021 Frontier Health and Medical Research	University of Western Australia	University	WA	Disruptive Technologies for Precision Medicine in Coronary Artery Disease	Coronary artery disease (CAD) is the single leading cause of death in Australia and the world. It is believed that two-thirds of heart attacks originate from plaques with less than 50% blockage of arteries in patients without symptoms. Coronary computed tomography angiography (CCTA) has emerged as a robust technique for CAD assessment. However, its true potential is yet to be realised. Many of the CCTA image analysis steps and clinical decisions are ideally suited for artificial intelligence (AI) methods. In our study, we will work across disciplines to develop, test, and deploy an AI-based risk prediction tool from CCTA scans, and personalise the management of patients with CAD across the full spectrum of the care continuum.	Professor Girish Dwivedi	Not available	Open competitive	15/06/2021	14/09/2022	Not available	Not available	$ 896,606.00	Prior to 03/09/2024
RFRHPI000110	Frontier Health and Medical Research	2021 Frontier Health and Medical Research	University of Sydney	University	NSW	New Frontiers in Personalised Prevention of Coronary Artery Disease	One Australian suffers a heart attack every 10 minutes. Until now, clinicians have been limited to modifiable risk factors, such as cholesterol and blood pressure levels, to predict heart attacks and guide prevention. But, up to 27% of patients with life-threatening attacks have no standard modifiable risk factors, and a proportion progress rapidly to recurrent events despite optimal management. Clearly there is more at play. We are a cross-disciplinary team of clinicians, researchers, and healthcare and industry leaders with a track record of translating innovation who are galvanized to: 1) identify urgently needed biomarkers of early plaque; 2) establish evidence-based clinical pathways; 3) discover game-changing new drug treatments. GHFMRCMM000001	Genomics Health Futures Mission	2018 Mackenzie's Mission	Murdoch Children's Research Institute	Medical Research Institute	VIC	Mackenzie's Mission: The Australian Reproductive Carrier Screening Project	Mackenzie Casella died aged 7 months from spinal muscular atrophy (SMA), a rare genetic condition. Mackenzie's parents, Rachael and Jonny Casella did not know they were carriers of SMA until after Mackenzie was born. They asked the question – why weren't we given the chance to find this out before becoming pregnant? The goal of Mackenzie's Mission is to work for a future in which no parent has to ask that question. Mackenzie's Mission: The Australian Reproductive Carrier Screening Project, aims to prepare the Australian healthcare system for population-wide reproductive carrier screening: screening 10,000 Australian couples before they conceive or in early pregnancy for ~500 genes associated with severely debilitating and often fatal genetic conditions affecting children. We will implement laboratory practices and protocols to deliver carrier screening at scale, with rapid results for couples. We will evaluate the screening outcomes, psychosocial impacts, ethical issues, possible barriers to successful uptake and health economic implications of the program. We will evaluate the views of Australians on carrier screening, and provide resources and tools to educate them, and empower them to make informed choices. We will follow the choices of couples found to be at high risk, and provide them with counselling and support through their choices. MRF1152342	Global Health	2017 Antimicrobial Resistance Targeted Call For Research	Monash University	University	VIC	Stepped-wedge Trial to increase antibiotic Appropriateness in Residential aged care facilities and model Transmission of antimicrobial resistance (The START Research Program)	Residential aged care facilities (RACFs) represent a challenging and unique environment with significant drivers for the emergence and propagation of AMR. Our research to date has been instrumental in defining antimicrobial use and prescribing practices in Australian RACFs, including important barriers to antimicrobial stewardship and the prevalence of antimicrobial resistance. Our research directly led us to publish a "Case for Action" on "Antimicrobial Usage in Residential Aged-care Facilities" accepted by the NHMRC Research Translation Faculty in 2015. The critical unmet needs defined in this case for action form the key elements of this call for research. Our multidisciplinary team will deliver on three key outcomes through the design and implementation of a multifaceted, nurse-led antimicrobial stewardship intervention in a broad RACF network across multiple states in Australia. This intervention will be assessed using a stepped-wedge, cluster randomised controlled trial, with broad implications for practice and policy change. We will also study resident movement to and from RACFs using detailed network analyses, and characterise the spread of AMR organisms and resistance gene elements through use of advanced genomic and metagenomic technologies. We will use innovative methodologies to model AMR transmission that will be applicable to multiple settings, and by embedding these analyses within a randomised intervention trial, we will quantify the impact of improved antimicrobial use on AMR transmission in Australian RACFs.	Professor Anton Peleg	Professor Anton Peleg, Professor Terrence Haines, Professor Allen Cheng, Associate Professor Trisha Peel, Professor Kathryn Holt, Professor Sarah Hilmer, Professor Yun-Hee Jeon, Associate Professor Andrew Stewardson, Doctor Tim Spelman	Restricted competitive	20/06/2018	31/12/2024	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Infectious diseases	Clinical Medicine and Science Research	$ 1,826,398.82	Prior to 03/09/2024
MRF1152268	Global Health	2017 Antimicrobial Resistance Targeted Call For Research	South Australian Health and Medical Research Institute Limited	Medical Research Institute	SA	Using metagenomics and the Registry of Ageing South Australians to understand carriage and transmission of antimicrobial resistance in the elderly	The GRACE study will address critical knowledge gaps in relation to antimicrobial resistance (AMR) in the residential aged care environment. Using a metagenomics-based strategy it will provide a comprehensive and highly detailed analysis the AMR dispersal in aged care residents, determine risk factors for carriage of resistant microbes, and identify modes of transmission. It will provide a basis for the development of specific strategies to limit the burden of resistant organisms in the residential aged care population, as well as allowing an assessment of the leading technology for long-term AMR surveillance. The study cohort will comprise of aged care residents, including those with cognitive impairment, across multiple sites in South Australia. Specifically, the study will address five fundamental questions: 1. What factors determine the types and levels of AMR carried by residents? 2. To what extent is there evidence of AMR transmission between residents? 3. Is interaction with RACF built environment likely to facilitate AMR transmission? 4. Do hospital visits for acute care significantly influence types and levels of AMR carriage? 5. To what extent do ageing-associated changes in gut microbiology influence AMR carriage?	Professor Geraint Rogers	Professor Geraint Rogers, Professor Steven Wesselingh, Professor David Gordon, Professor Maria Crotty, Associate Professor Maria Inacio, Associate Professor Craig Whitehead, Professor David Lynn, Professor Richard Woodman, Doctor Lito Papanicolas, Doctor Lex Leong	Restricted competitive	21/06/2018	31/12/2021	MEDICAL AND HEALTH SCIENCES, Medical microbiology, Medical bacteriology	Clinical Medicine and Science Research	$ 1,731,373.66	Prior to 03/09/2024
MRF1152503	Global Health	2017 Antimicrobial Resistance Targeted Call For Research	The University of Queensland	University	QLD	Cluster randomised trial of a multimodal intervention to reduce antimicrobial use in residential aged care facilities	Antibiotic resistant Enterobacteriaceae have considerable health importance. Chief Investigators Paterson and Harris have just completed enrolment in the largest randomized controlled trial (RCT) yet performed on treatment options for priority 1 pathogens (Harris, 2015). In this 380 patient RCT on bloodstream infections for ESBL producing Enterobacteriaceae, the overall 30-day mortality was 7.6%. This approaches the 8% in-hospital mortality observed in patients presenting to hospital with acute myocardial infarction, emphasizing the significance of this infection. Mortality from infection with multiresistant organisms in patients admitted to hospital from residential aged care facilities (RACFs) is likely to be even higher. With this background, the aim of this project is: To determine the prevalence of infection and colonisation with Multi-Drug Resistant (MDR) organisms (in particular, carbapenem resistant or ESBL producing Enterobacteriaceae) in Brisbane RACFs; By molecular analysis, to determine the mechanisms of resistance and modes of spread of MDR organisms to and from RACFs and tertiary care hospitals; To determine if a multifaceted intervention reduces antibiotic use in RACFs.	Professor David Paterson	Professor David Paterson, Professor Len Gray, Professor Mark Schembri, Professor Ruth Hubbard, Associate Professor Christopher Freeman, Ms Elaine Pascoe, Doctor Patrick Harris, Doctor Nancye Peel, Associate Professor Scott Beatson, Doctor Ellen Burkett	Restricted competitive	26/06/2018	31/12/2023	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Infectious diseases	Clinical Medicine and Science Research	$ 1,199,975.86	Prior to 03/09/2024
MRF1152556	Global Health	2017 Antimicrobial Resistance Targeted Call For Research	University of South Australia	University	SA	Turning antimicrobial resistance in residential aged care inside-out from the patient to facility level	The WHO has identified drug-resistant bacterial infections as a global public health threat that needs urgent attention. Vulnerable populations are those such as residents in aged care facilities with contributing factors of aged-related physiology, underlying chronic conditions and the dense cohabitation. Infections are often difficult to diagnose due to co-morbidities and lack of on-site diagnostics, resulting in compromised antimicrobial stewardship and high levels of inappropriate antibiotic use. Hence residential aged care facilities (RACFs) are known reservoirs for antimicrobial resistance (AMR). Further, wastewater generated by these facilities contains high levels of pharmaceutical pollutants, thereby providing a hotspot of AMR selective pressure and resistance transfer to the environment. However, information about the extent of AMR in aged care, as well as the risk factors that contribute to the development and dissemination of AMR, are lacking. In this project we are using a multipronged One Health surveillance approach to provide much needed information on AMR in RACFs. Our study is underpinned by an extensive sampling regime that include the residents, the facilities and the wastewater generated by the facilities. The metaresistome of the samples are determined and combined with phenotypic and genotypic analysis of a biobank of organisms isolated from these samples. A survey of antibiotic/drug use in the RACF and chemical analysis of the wastewater further complements the data obtained. Participating RACFs were selected to provide a good coverage of variables (i.e. residency status, indwelling devices and co-morbidities) and to allow the comparison between RACFs with/without antimicrobial stewardship programmes. Combined, this data will enable robust multivariate analysis of AMR risks associated with key system variables. These models will then be used to inform AMR risk assessments and guide future policy controls to curb the spread of AMR to, within and from RACFs. To our knowledge this is the only study of its kind to encompass such an extensive analysis of multiple factors contributing to the development and dissemination of antimicrobial resistance in aged care. MRF1200856	Global Health	2019 Tackling Antimicrobial Resistance and Drug Resistant Tuberculosis in Pacific Island Countries	University of Melbourne	University	VIC	Rapid detection of drug resistant tuberculosis using real-time sequencing	One of the major challenges in combatting the tuberculosis epidemic in Papua New Guinea is rapid, affordable identification of drug-resistance in order to ensure that appropriate treatment regimen is established early in the course of the disease. Unnecessary use of the latest line of anti-tuberculosis WHO class 5 drugs leads to the development of drug resistance, while use of drugs to which the bacterium is resistant leads to prolonged treatment and exposure of family members, leading to greater rates of transmission and increased mortality. Currently, rapid identification of rifampicin resistance has been made possible in-country through Gene-Xpert; however full characterisation of drug resistance is currently done out-of-country and takes months before results are known. It is possible to generate highly accurate predictions of drug resistance for many TB drugs from whole-genome sequencing; however, this is typically achieved by first culturing the bacterial isolate over several weeks. Real-time nanopore metagenomic sequencing is promising, but is prohibitively expensive due to the very small proportion of mycobacterial to human DNA in sputum. We have developed nanoparticles which can enrich mycobacterium directly from biological sample. We propose to use these nanoparticles in conjunction with real-time nanopore sequencing and streaming bioinformatics to characterise drug resistance in Papua New Guinea. MRF1200755	Global Health	2019 Tackling Antimicrobial Resistance and Drug Resistant Tuberculosis in Pacific Island Countries	University of Sydney	University	NSW	Pathway to the Elimination of Antibiotic-Resistant Tuberculosis in the Pacific	Tuberculosis (TB) is the leading infectious disease killer on the planet. Urgent action is required to mitigate the threat of drug resistant (DR) TB in the Pacific, especially in TB hotspots such as Kiribati. Tarawa, the Kiribati capital, is one of the most densely populated places in the Pacific, with potential to act as a national/regional amplifier of the TB/DR-TB epidemic if TB transmission is not interrupted. Tarawa is uniquely placed to implement a bold 'whole of population' TB elimination strategy. The overall project aims are to: 1) evaluate the effect of a community-wide active case finding program upon TB transmission and case notification in Tarawa, 2) provide Pacific-wide training and mentoring to improve DR-TB care and prevention, and 3) model the longterm cost-effectiveness and impact of different population-based elimination strategies, using data from Tarawa and other Pacific settings to inform regional and global TB control policy. MRF2035890	Indigenous Health Research Fund	2023 Indigenous Health Research	Australian National University	University	ACT	Improving First Nations Experiences of Genetic Health Services Through Two-way Learning	Current genetic health services are not meeting the needs of First Nations patients and families. Our consultations and research to date have demonstrated there is disparity between the information provided by genetic services and what Indigenous communities actually seek, resulting in a breakdown of trust, and increased obstacles to accessing and engaging with these services. To address this, culturally appropriate resources that facilitate two/way learning and communication between communities, Indigenous health services, genetic health care providers, as well as policy options that address this space are needed. The effective delivery of genomic medicine hinges on a shared understanding for informed decision making and patient trust in health services. This involves building capacity and capability in three areas: genetic health literacy in communities; culturally safe practices in mainstream services; and policy. Our project aims to address these areas using participatory action research, a two-way learning framework, and policy analysis to develop 1) an educational package tailored for genetic and public health professionals; 2) a suite of genetic health literacy resources for community members and Indigenous health services; and 3) new policy directions. Our collaborative approach involves partnering with First Nations patients, families, communities and organisations, as well as genetic health service clinicians and providers, to co-create these resources and educational interventions as well as informing a policy analysis for transformational change. Central to our methodology is the prioritization of Indigenous knowledges and communication styles, ensuring that the resulting resources and interventions are deeply rooted in First Nations concepts of health and wellbeing. Moreover, we will collaborate closely with key stakeholders to evaluate efficacy and ensure implementation of project outputs into policy and practice. MRF1200223	Million Minds Mental Health Research Mission	2019 Suicide Prevention	Murdoch Children's Research Institute	Medical Research Institute	VIC	Suicide prevention among men in early fatherhood: Determining the effectiveness of Working Out Dads, a group-based peer support intervention to reduce fathers' mental health difficulties compared to usual care	One of the highest rates of suicide among men coincides with a key life stage when many become fathers and are raising young children. Effective interventions to improve men's mental health during early fatherhood are an integral part of a comprehensive suicide prevention strategy to reduce the number of male suicides in Australia. This randomised controlled trial will determine the effectiveness, cost-effectiveness and scalability of the Working Out Dads (WOD) program, a suicide prevention intervention targeting men in early fatherhood. WOD is an innovative 6-week group-based peer support intervention to: (a) reduce fathers' mental health difficulties and suicidal ideation, (b) reduce barriers to help-seeking, (c) increase social support, and (d) reduce unmet need for mental health services. This real-world effectiveness trial will generate high quality evidence about a targeted suicide prevention intervention that can be implemented and scaled up in community-based services working with families of young children. This will provide greatly improved opportunities for early and effective provision of mental health care to men at risk of suicide in early fatherhood. MRFAI000097	National Critical Research Infrastructure	2019 Applied Artificial Intelligence Research in Health	University of Sydney	University	NSW	Explainable machine learning to improve youth mental health care	Mental disorders are the leading cause of disability and death among young people. A key challenge for mental health care is to develop new tools that are useful for guiding clinical decisions about the appropriate interventions for individuals presenting for care. This project will: (i) use explainable machine learning and simulation to infer the causal relationship between mental health outcomes over time; (ii) use dynamic simulation modelling to test and probabilistically quantify the impacts of interventions on outcomes; and (iii) co-design an ethical clinical decision-support tool that identifies how to target assessment and interventions to optimise outcomes for individuals presenting to health services.	Not applicable	Not available	Open competitive	30/06/2020	29/06/2023	Not available	Not available	$ 3,107,627.00	Prior to 03/09/2024
MRFAI000085	National Critical Research Infrastructure	2019 Applied Artificial Intelligence Research in Health	University of Sydney	University	NSW	TRanslating AI to Support Clinical Excellence in Neuro Diseases	Software-generated 'artificial neural networks' have demonstrated a remarkable capacity for (generic) image recognition, with error rates of only 1-2%. Despite the clear potential for this technology to transform health delivery, particularly through advances in medical imaging, AI research and implementation has remained the purview of research institutes and technology companies with limited domain knowledge or access to real-world data. TRANSCEND seeks to redress this imbalance by building a novel, hybrid AI learning ecosystem that links a premiere research institute (University of Sydney) and industry specialist (Sydney Neuroimaging Analysis Centre) with health provider networks (IMED Radiology and clinical Neurology partners) to generate clinically-relevant biomarkers of disease progression for the common, disabling neurological condition, multiple sclerosis. The MSBASE-XNAT imaging repository and I-MED clinical radiology site data will respectively form the key components of a unique central-federated AI learning environment, yielding algorithms that, validated in a clinical neurology environment, will set a benchmark in diagnostic MS imaging; track subclinical progression of the disease; direct therapeutic strategy; and mine hitherto untapped quantitative imaging data. Our novel approach will enable new AI research and technologies within the health sector, while preserving patient privacy and data security.	Not applicable	Not available	Open competitive	30/06/2020	6/06/2024	Not available	Not available	$ 4,016,415.00	Prior to 03/09/2024
MRFAI000028	National Critical Research Infrastructure	2019 Applied Artificial Intelligence Research in Health	University of New South Wales	University	NSW	Optimising treatments in mental health using AI	Mental health disorders are prevalent, affect people in every workplace, and cause great distress to students and their parents. A major problem is that most treatments in mental health are only partially effective. We don't know which interventions, or which components of therapies provide the vital, active ingredients, and why they work for some but not for others. We will use artificial intelligence (AI) to uncover which treatments for stress, anxiety and depression work quickly, and for whom. If AI can advance a solution towards shortening the prolonged period where people are provided with non-optimal treatment for their condition, the social, personal and economic costs would be enormous.	Not applicable	Not available	Open competitive	30/06/2020	6/06/2024	Not available	Not available	$ 4,995,434.00	Prior to 03/09/2024

MRFCTI000008	National Critical Research Infrastructure	2021 mRNA Clinical Trial Enabling Infrastructure	Southern RNA Pty Ltd	Corporation	QLD	Translational ecosystem for clinical development of mRNA modalities	There is currently an unmet need in Australia for facilities and services to develop mRNA vaccines from preclinical to clinical, from genetic material production to manufacture of the vaccine. This project will establish an end-to-end RNA Development and Manufacturing Ecosystem in Queensland based on a partnership between QIMR Berghoffer, the University of Queensland, Griffith University and industry partners Southern RNA, Cytiva, Providence Therapeutics/Northern RNA and Springfield City Group. At completion, this project will have invested in mRNA manufacture and formulation infrastructure in Queensland to support the development of the next-generation of mRNA modalities, and will have progressed multiple mRNA vaccines to clinical studies.	Doctor Romain Guillaume Bertrand Tropee	Doctor Romain Guillaume Bertrand Tropee, Associate Professor Timothy Robert Mercer, Professor Nigel Alan McMillan, Professor Andreas Suhrbier, Mr Garry Heaney, Ms Natalie Martin Orozco, Doctor Jagannmohan Billakanti, Professor Frank Gannon, Doctor Aleksandra Pastrak	Targeted competitive	10/05/2023	29/04/2028	Not available	Not available	$	5,000,000.00	Prior to 03/09/2024
MRFCTI000004	National Critical Research Infrastructure	2021 mRNA Clinical Trial Enabling Infrastructure	Biocina Pty Ltd	Corporation	SA	Developing enabling technologies for manufacture of precision mRNA vaccines	Australia currently lacks domestic manufacturing of mRNA products under accredited pharmaceutical GMP. This MRFF grant will strengthen linkages between commercial lead BioCina Pty Ltd, industry partner Cytiva, as well as expand discovery research in microfluidic chip parallel manufacturing of mRNA based therapeutic vaccines with world-class experts from the University of Adelaide. Outcomes of this grant will extend the mRNA manufacturing and analytical capabilities of BioCina's GMP facility to all clinical phases and commercial supply and deliver new to market automated microfluidics technology for manufacture of mRNA therapeutic vaccines, which will fill a significant technology gap in the personalised mRNA vaccines market.	Doctor Jan Bekker	Doctor Jan Bekker, Doctor Lukas Geerstweiler, Doctor Rini Akmeliawati, Professor David Milton Lewis, Professor Chun-Xia Zhao, Associate Professor Abel Santos, Professor Robert John Falconer, Doctor Richard van Wegen, Doctor Gerben Zondag, Professor Brendon Coventry, Professor Tim O'Meara	Targeted competitive	10/05/2023	31/03/2028	Not available	Not available	$	5,000,000.00	Prior to 03/09/2024
MRFCTI000007	National Critical Research Infrastructure	2021 mRNA Clinical Trial Enabling Infrastructure	University of New South Wales	University	NSW	BRIDGE: Bringing RNA Innovations through the Developmental Gap Effectively	This Consortium co-ordinates and builds upon existing infrastructure and developmental expertise to streamline a developmental pathway for RNA molecules. These molecules will be taken though 4 steps: 1) identification of lead candidate 2) cGMP/cGMP-like manufacture 3) Clinical trial-enabling studies 4) Early phase clinical trials Key components of this process include: compliance with regulatory agency requirements for pharmaceutical development; stage-gating of budgetary allocations; protection and enhancement of intellectual property; enhancement of existing capabilities; active fund raising. The primary objective is to allow inventors and host institutions to undertake rigorous, efficient product development in an academic setting.	Professor Anthony D Kelleher	Professor Anthony D. Kelleher, Professor Mark Thomas Sullivan, Doctor Charlotte Rose Lemech, Professor Gail Matthews, Professor Matthew Gwyn Law, Doctor Louise Ann Evans, Professor Pall Thordarson, Doctor Chantelle Lisa Evelyn Ahlenstiel, Professor Christopher Carl Goodnow, Doctor Deborah Lily Burnett, Mr Andrew Douglas Warden	Targeted competitive	1/06/2023	30/10/2027	Not available	Not available	$	5,000,000.00	Prior to 03/09/2024
MRFCRI000210	National Critical Research Infrastructure	2022 National Critical Research Infrastructure	Baker Heart and Diabetes Institute	Medical Research Institute	VIC	Building an Australian Cardiovascular disease Data Commons (ACDC)	In this program we will develop an Australian Cardiovascular disease Data Commons (ACDC) which is controlled, secure, scalable, internationally integrated and with a selection of the world's best practice analysis platforms. It will provide the necessary vehicle for deriving new discoveries and biomarker predictors to be used in the clinic. We will build on widely used, supported and established open-source technology that underpins the NIH's National Heart, Lung and Blood Institute (NHLBI) BioData Catalyst (currently holds data on >430,000 individuals). We will onboard cohort data representing over 390,000 individuals, over 70,000 with genomic and/or metabolomic data in combination with imaging and longitudinal clinical data.	Professor Peter John Meikle	Professor Peter John Meikle, Professor Gemma Alexandra Figtree, Professor Andrew James Lonie, Associate Professor Bernard James Pope, Doctor Andrew Mark Gilbert, Doctor Clare Sullivan Bernard, Professor Ashok Kumar Krishnamurthy, Professor Dianna Josephine Magliano, Doctor Guy Yeoman Krippner, Professor Jean Yee Hwa Yang, Professor Anthony Clifford Keech, Doctor Steven Manos, Doctor Rhys Steven Francis, Professor Angela Claire Webster, Professor Robert Grossman	Open competitive	30/06/2023	30/06/2027	Not available	Not available	$	2,929,499.00	Prior to 03/09/2024
MRFCRI000092	National Critical Research Infrastructure	2022 National Critical Research Infrastructure	La Trobe University	University	VIC	Tissue Repository of Airway Cancers for Knowledge Expansion of Resistance	Metastatic lung cancer is the leading cause of cancer death in Australia. Research to improve outcomes is hindered by access to appropriate tissue, representing an area of unmet need. This project will establish a bio and data bank including, for the first time, minimally invasive endobronchial ultrasound tumour samples, liquid biopsies, and bronchoalveolar lavage fluid collected over a patient's cancer journey. By applying innovative multiomic approaches, we will discover novel drivers of immunotherapy resistance. To improve health outcomes, all samples and data will be available for further research, establishing a large clinically-matched multiomics dataset to inform future clinical trials and integrate with therapeutic data platforms.	Doctor Tracy Leong	Doctor Tracy Leong, Doctor Sagun Parakh, Doctor Stephen Wong, Doctor Ashleigh Poh, Professor Tony Papenfuss, Associate Professor Katy Dee Vere Sutherland, Associate Professor Daniel Steinfort, Professor Alvin Ing, Doctor Venessa Therese Chin, Professor Kwun Fong, Associate Professor David Ivor Fielding, Professor Phan Tien Nguyen, Associate Professor Rajesh Thomas, Mrs Lisa Briggs	Open competitive	30/06/2023	29/06/2026	Not available	Not available	$	2,929,496.00	Prior to 03/09/2024
MRFCRI000293	National Critical Research Infrastructure	2022 National Critical Research Infrastructure	University of Melbourne	University	VIC	Optimising real-world data use to drive cancer care delivery and research	This multidisciplinary team of clinicians, consumers and researchers from health services, cancer cohorts, and digital health will establish new research infrastructure. The National Cancer Cohort Platform will be an online digital asset that drives research by bringing together large established cohort study databases, biospecimen repositories, and familial pedigrees. Defining a Common Data Model helps support data federation, data linkages, and scaling for future cohorts. The platform will connect consumers, patients, clinicians and researchers across Australia and internationally through a web-portal. A data commons approach provides real opportunity to make progress in areas of unmet need in cancer, and to harness big data.	Professor Karin Thursky	Professor Karin Thursky, Doctor Ashley Ng, Associate Professor Heather Thorne, Ms Nadia Traficante, Doctor Damien Kee, Ms Lisa Devereux, Professor Paul James, Ms Sophy Athan, Ms Maureen Turner, Doctor Gareth Jones, Doctor Dishan Herath, Associate Professor Steph Best, Ms Vimala Jacob, Ms Eveline Niedermayr, Doctor Colin Wood	Open competitive	30/06/2023	31/05/2027	Not available	Not available	$	2,927,895.00	Prior to 03/09/2024
MRFCRI000199	National Critical Research Infrastructure	2022 National Critical Research Infrastructure	The University of Newcastle	University	NSW	Establishing a National Aboriginal Health Research Human Ethics Committee	All health research involving Aboriginal and Torres Strait Islander people optimally requires ethics approval from a specialist Aboriginal human research ethics committee (HREC). Currently, there is no national HREC that can approve cross-jurisdictional or national Aboriginal health and medical research. This lack of critical infrastructure adds to research time frames and cost, and can result in culturally unsafe research. This project will use a co-design process to establish a National Aboriginal and Torres Strait Islander HREC (NAHREC). The NAHREC will directly contribute to timely improvements in health outcomes for Aboriginal and Torres Strait Islander people by streamlining the conduct of culturally safe health and medical research. MRFCRI000195	National Critical Research Infrastructure	2022 National Critical Research Infrastructure	Monash University	University	VIC	The One Water Consortium	Waterborne communicable disease (WCD) is recognised as a significant health concern in remote and Indigenous communities, and an increasing risk due to rising natural disasters (floods/cyclones). An objective of the National Health Security Act (2007) was provision of a national public health surveillance system to respond to significant public health risks, including risks from human-environment interactions. Yet, there is no national WCD surveillance system. The One Water Consortium will develop Australia's first multidisciplinary framework for WCD surveillance, supporting new research discovery through establishment of standardised policies, procedures and quality services alongside tools to for secure resource sharing.	Doctor Rebekah Henry	Doctor Rebekah Henry,, Associate Professor David Thomas McCarthy, Doctor S Fiona Barker, Associate Professor David Powell, Professor Melissa Southey, Mr Jerico Revote, Professor Karin Leder	Open competitive	30/06/2023	30/03/2028	Not available	Not available	$	2,928,136.00	Prior to 03/09/2024
MRFCRI000102	National Critical Research Infrastructure	2022 National Critical Research Infrastructure	Monash University	University	VIC	Drug Target Identification Platform	This platform will identify and validate the molecular targets of new drug candidates to enable their further optimisation and development. State-of-the-art mass spectrometry will underpin advanced proteomics and metabolomics approaches, supported by transcriptomics and functional genomics approaches, to identify drug targets within cells and monitor pharmacodynamic biomarkers that support progression of drug candidates through pre-clinical and clinical development. This capability will fill an important gap in the Australian drug discovery landscape, and accelerate the pharmaceutical development and commercialisation of many of the fundamental biomedical discoveries arising from our academic and small pharmaceutical entities.	Associate Professor Darren John Creek	Associate Professor Darren John Creek, Professor Vicky Marie Avery, Professor Stuart Maxwell Pitson, Doctor Amee Jane George, Doctor Sam William Zygmunt Olechnowicz, Associate Professor Ralf Bernd Schittenhelm, Professor Jonathan Baell, Doctor Catherine Drinkwater, Associate Professor Bernard Luke Flynn, Professor Christopher James Langmead, Associate Professor Paul Anthony Stupple, Professor Jian Li, Vice President, Technology - ADME-TOX Kenneth Russell Brouwer, Associate Professor Greg Martin Arndt	Open competitive	30/06/2023	29/06/2028	Not available	Not available	$	2,927,359.00	Prior to 03/09/2024
MRFCRI000173	National Critical Research Infrastructure	2022 National Critical Research Infrastructure	Flinders University	University	SA	In SCOPE: Digital solutions to optimise colonoscopy surveillance	Colorectal cancer is the second largest cause of cancer-related death in Australia. We urgently need effective preventive interventions to ensure that optimal surveillance through regular colonoscopies are accessible to people with risk factors for this cancer. This project will develop, validate and implement a digital intervention surveillance program to manage the growing demand for colonoscopies, whilst establishing a data registry for future cancer research. Our implementation trial across 8 urban and regional hospitals will provide the critical evidence to validate its consumer acceptability, improvement to clinical practice, and cost effectiveness. We will also ensure the surveillance program is sustainable and scalable nation-wide.	Associate Professor Erin Leigh Symonds	Associate Professor Erin Leigh Symonds, Doctor William Edmond Wilson, Professor Lyle Palmer, Professor Richard Woodman, Associate Professor Billingsley Kaambwa, Professor Billie Bonevski, Mrs Grace O'Donohue, Doctor Phil John Worley, Associate Professor Mark N Schoeman, Doctor Charles Cock, Ms Kathryn Jane Cornthwaite, Professor Rajvinder Singh, Doctor Ilmars Lidums, Doctor Eleonora Feletto, Doctor Quentin Ralph	Open competitive	30/06/2023	29/06/2028	Not available	Not available	$	2,929,493.00	Prior to 03/09/2024
MRFCRI000020	National Critical Research Infrastructure	2022 National Critical Research Infrastructure	Flinders University	University	SA	AutoMedic: A scalable, smart solution to detect and resolve medicine harm	Medicine safety reviews are time- and resource-intensive processes but essential for patient safety. This project will develop an innovative, automated medicine risk review program (AutoMedic). AutoMedic uses Artificial Intelligence to precisely detect potential issues with medicine regimens, which are then reviewed and resolved by pharmacists efficiently, supported by improved communication pathways with prescribing doctors and patients. We will subsequently implement and evaluate its impact in a large trial across 6 local public hospitals in SA, and develop a national rollout plan. AutoMedic will deliver timely care to prevent medicine-related harms, ultimately saving costs to Australians and the healthcare system.	Associate Professor Niranjan Bidargaddi	Associate Professor Niranjan Bidargaddi, Ms Sally Bernice Marotti, Mr Craig Martin, Doctor Janet Kathleen Sluggett, Doctor Bronwin Leigh Patrickson, Doctor Johan Verjans, Doctor Zhibin Liao, Mr Michael Scott Bakker, Professor Richard Lewis Reed, Professor Gary Allen Wittert, Associate Professor Shahid Ullah, Doctor Monica Cations, Professor Gillian Harvey, Mrs Karen Amanda Macolino	Open competitive	30/06/2023	30/09/2027	Not available	Not available	$	2,923,818.00	Prior to 03/09/2024
MRFCRI000075	National Critical Research Infrastructure	2022 National Critical Research Infrastructure	The University of Adelaide	University	SA	Augmented Reality to improve telemedicine delivery and wound research	This project will use an augmented reality (AR) telehealth toolset to revolutionise the assessment and treatment of leg and foot wounds associated with diabetes and cardiovascular disease. It will allow a specialist team in a city hub to 'see through the eyes' of rural health workers to accurately diagnose and treat these wounds. This will allow health professionals to act as one team across locations, reducing rates of emergency hospitalisation for patients while allowing them to stay near their home communities. This technology will use artificial intelligence to automatically measure wounds, which will be particularly useful for clinical scientists to measure wound healing in research seeking to prevent amputations. MRFCRI000246	National Critical Research Infrastructure	2022 National Critical Research Infrastructure	The University of Queensland	University	QLD	NINA: National Infrastructure for federated learNing in DigitAl health	NINA will improve the care of Australians with chronic disease through a disruptive approach led by Australia's leading clinicians and digital health experts. It will address Australia's health data fragmentation problem which limits research. Building on strong partnerships across academia, health and industry, NINA will pioneer new ways of learning from different data sets across geographical boundaries and the care continuum, with the data remaining where it is generated and sending the analysis to the data. NINA will establish, evaluate and scale privacy preserving federated learning technology and analytics using synthetic data sets prior to validation on real data to answer unmet clinical questions in chronic disease.	Associate Professor Clair M Sullivan	Associate Professor Clair M Sullivan, Doctor Dominique JP Gorse, Doctor Michael J Lawley, Professor Enrico W Coiera, Professor Ranjeny Thomas, Doctor Xingliang Yuan, Doctor Yasmeen George, Professor Steven M McPhail, Associate Professor Susan J de Jersey, Associate Professor Jiangning Song, Professor Euan T Walpole, Professor Leonie Callaway, Ms Maureen G Turner, Doctor Bill Donnelly, Professor Lynette (Lyn) M March	Open competitive	30/06/2023	29/06/2028	Not available	Not available	$ 6,012,148.00	Prior to 03/09/2024
NCRI000019	National Critical Research Infrastructure	2023 National Critical Research Infrastructure	Flinders University	University	SA	SMART-PH - Digitising Information for Practice in Public Health	Our public health system needs critical digital infrastructure to facilitate multi-sector collaborations in a highly siloed health system – this will overcome the current barriers to access real-time high-quality data, which is hindering public health programs/initiatives/interventions from being proactive, targeted and more efficient. This project will establish and implement SMART-PH, a public health AI-driven data analytics and linkage platform that allows us to model, predict and evaluate public health interventions in, and with the communities and health stakeholders. We will ensure the digital infrastructure is useful, acceptable, and effective in elevating our collaborative efforts in preventative health and promoting wellness.	Associate Professor Courtney Ryder	Associate Professor Courtney Ryder, Professor Nicola Spurrier, Professor Sankalp Khanna, Professor Lyle John Palmer, Professor Billie Bonevski, Professor Ray Mahoney, Professor Caroline Miller, Doctor Gilly Hendrie, Professor Paul Andrew Arbon, Ms Juli Ferguson, Mr Patrick Sharpe, Associate Professor Murthy Narasimha Mittinty, Associate Professor Hossein Haji Ali Afzali, Professor Joy Rathjen	Open competitive	19/06/2024	18/06/2029	Not available	Not available	$ 2,999,843.00	19/11/2024
NCRI000029	National Critical Research Infrastructure	2023 National Critical Research Infrastructure	The University of Queensland	University	QLD	NASCENT: National infrastructure for real-time clinical AI trials	Australian healthcare is in urgent need of innovation. AI promises to play a fundamental role in delivering better healthcare, however, there is uncertainty around how to safely implement AI, how our workforce will embrace new ways of working, and how consumers will react. NASCENT will deliver: a scalable digital infrastructure solution that enables the safe and ethical prospective evaluation of AI technologies demonstrated on in-hospital deterioration and sepsis; best practice consumer partnership; and AI implementation resources for clinical and technical staff. It builds on strong partnerships among academics, clinicians, industry and consumers and is overseen by peak national patient safety and regulatory authorities.	Associate Professor Clair M Sullivan	Associate Professor Clair M Sullivan, Professor Guido Zuccon, Doctor Victoria Campbell, Research Fellow Anton H van der Vegt, Associate Professor Blanca Gallego Luxan, Professor Ian Scott, Professor Andrew John Mallett, Professor Imogen A Mitchell, Professor Daryl Andrew Jones, Associate Professor Amith L Shetty, Associate Professor Ling Li, Associate Professor Athanasios Flabouris, Professor Bala Venkatesh, Doctor Paul James Lane, Mr Dale Trevor	Open competitive	7/06/2024	30/09/2029	Not available	Not available	$ 2,994,539.00	19/11/2024
NCRI000033	National Critical Research Infrastructure	2023 National Critical Research Infrastructure	University of Melbourne	University	VIC	Youth AI: Infrastructure for the Next Generation of Youth Mental Healthcare	Mental illnesses first occur in youth and can lead to lifelong disability. Our team established the largest preventative youth-based services in the world to address this problem, but consumers have identified an urgent unmet need to personalise and modernise care. We can achieve this using artificial intelligence (AI), but we have no infrastructure to safely, fairly, and responsibly implement the new technology. Youth-AI will provide translational infrastructure to modernise care by establishing AI services, software, data linkages, web applications, education, and safety monitoring. Achieving these aims will allow researchers to lead the next generation of mental healthcare for youth.	Doctor Dominic Dwyer	Doctor Dominic Dwyer, Professor Debra Rickwood, Professor Richard Sinnott, Associate Professor Zongyuan Ge, Professor Pat McGorry, Professor Mario Alvarez-Jimenez, Doctor Magenta Simmons, Professor Wendy Chapman, Professor Jeannie Paterson, Doctor Caroline Gao, Professor Andrew Thompson, Professor Stephen Wood, Professor Barnaby Nelson, Doctor Yong Yi Lee, Doctor Ellie Brown	Open competitive	25/06/2024	1/09/2028	Not available	Not available	$ 2,997,208.00	19/11/2024
NCRI000043	National Critical Research Infrastructure	2023 National Critical Research Infrastructure	University of Melbourne	University	VIC	OMIX3: High-capacity integrated multi-omics	This project will lead to the establishment of a new, high-capacity, multi-omics facility for clinical research and delivery of NATA accredited diagnostic tests. OMIX3 will allow parallel collection of proteomic, metabolomic and lipidomic data on a range of human sample types. The platform will support sample collection and biobanking, secure data storage and NATA accreditation. OMIX3 will underpin a number of flagship projects directed at identifying disease mechanisms and new biomarkers for chronic, infectious and rare genetic diseases that affect millions of Australians. It will support existing MRFF, NHMRC and industry funded projects and deliver a step-change in clinical diagnostics and predictive health outcomes at scale.	Professor Olivia Louise Carter	Professor Olivia Louise Carter, Professor Malcolm McConville, Associate Professor David Arthur Stroud, Doctor Daniella Helena Hock, Professor Richard Saffery, Associate Professor Bernard James Pope, Doctor Julian Guy Simmons, Professor Sammy Bedoui, Professor Stuart Dashper, Associate Professor Kaylene Simpson, Professor John Christodoulou, Doctor Miloni Silva, Associate Professor Benjamin Leo Parker, Professor Kim-Anh Le Cao, Associate Professor Michael Patrick Menden	Open competitive	15/05/2024	14/05/2028	Not available	Not available	$ 6,998,210.00	19/11/2024
NCRI000049	National Critical Research Infrastructure	2023 National Critical Research Infrastructure	Monash University	University	VIC	RNA Mass Spectrometry Platform	RNA modifications are essential for most RNA therapeutics, by increasing their stability and activity. The only method that detects all types of RNA modifications is mass spectrometry. Yet, there are no RNA mass spectrometry services in Australia. Hence, most Australian biomedical teams are blind to essential quality measures of mRNA under their development. We aim to set up Australia's first RNA mass spectrometry platform. The platform is designed to provide a package of essential analytical services for the Australian RNA therapeutics sector. By doing so, the RNA mass spectrometry platform will accelerate the on-shore development of mRNA-based vaccines and other emerging RNA technologies, such as miRNA, siRNA, ASO, tRNA and CRISPR RNA. MRFI170820	Preventive and Public Health Research	2018 Keeping Australians Out of Hospital - Preventative Health Research in Rural and Regional Communities (Tasmania)	University of Tasmania	University	TAS	Preventative Health Research in Rural and Regional Communities (Tasmania)	An ageing Australia will increasingly impact social, health and economic activity, as exemplified in complex disorders such as dementia. Obesity is also increasing at a rapid rate and is a major antecedent risk factor for a range of chronic illnesses. Both conditions will be a particular challenge for rural and regional communities as they have the highest rates of related risk factors and chronic illness, and also relatively reduced access to specialist medical services and preventative health programs. This proposal focusses on dementia and obesity in north-west Tasmania, developing innovative initiatives to manage and reduce risk of these conditions, which will reduce medical procedures overall including presentations to hospital. The program involves two major projects: the Island Study Linking Ageing and Neurodegenerative Disease (ISLAND) and the Critical Age Periods for Impacting Obesogenic Lifestyles (CAPITOL) study. The ISLAND study will involve a pragmatic clustered randomised controlled on interventions for major potentially modifiable risk factors for dementia, including obesity, physical activity, diabetes, smoking, hypertension, depression and cognitive stimulation/education, most of which are antecedents to chronic illness. The CAPITOL study will facilitate a transdisciplinary professional network to build a community-specific, sustainable approach to supporting children and families in relation to physical health and wellbeing. This project will identify enabling contextual factors which influence engagement in healthy physical play practices; foster buy-in from families (at multiple entry points); improve school readiness (through enhancing outcomes for children (0-8 years) in the AEDC domain of physical health and wellbeing), and generate sustainable communities of practice. North-west Tasmania is an ideal 'test-bed' to develop preventative health strategies that are relevant and scalable to other Australian rural and regional communities. MRF1200422	Preventive and Public Health Research	2019 Preventive and Public Health Research	University of Canberra	University	ACT	A good start in life for young children: reducing vulnerability and health inequity	The project will evaluate an integrated multi-sector, multi-component programme of interventions for improving the health and wellbeing of children who are at the highest risk of developmental vulnerability. We will reduce children's problems, promote healthy child development, enhance family and community environments. In partnership with our local community and service providers, we will provide potential for scaling up and capacity building that will have national significance.	Professor Rachel Davey	Professor Rachel Davey, Associate Professor Margaret Cargo, Professor Michelle Lincoln, Professor Christine Phillips, Associate Professor Jane Herbert, Doctor Jacqueline McKechnie	Targeted competitive	1/06/2020	31/07/2025	MEDICAL AND HEALTH SCIENCES, Public health and health services, Preventive medicine	Public Health Research	$ 868,846.28	Prior to 03/09/2024
MRF1200276	Preventive and Public Health Research	2019 Preventive and Public Health Research	University of South Australia	University	SA	Healthy Choices: Co-designed community programs to enhance healthy lifestyle choices for people with chronic conditions	This project will implement and evaluate a community-based health service where university exercise and nutrition students partner with people with chronic conditions. Together they will learn about the specific condition/s and develop goals and individual and group programs. These programs will foster better health habits (including better diets and sustainable physical activity) that will improve the participants' health and well-being.	Professor Susan Hillier	Professor Susan Hillier, Professor Timothy Olds, Professor Carol Maher, Doctor Tiffany Gill, Professor Adrian Esterman, Doctor Jyoti Khadka, Professor Robert Adams, Professor Catherine Hill	Targeted competitive	1/06/2020	31/12/2026	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Rehabilitation and therapy (excl. physiotherapy)	Public Health Research	$ 780,670.00	Prior to 03/09/2024

MRF1200144	Preventive and Public Health Research	2019 Preventive and Public Health Research	University of Tasmania	University	TAS	Developing benchmarks and a smart online tool for assessing walkability in regional and rural communities: Supporting rural Australians to live healthy, active lives	Rural adults are less active and suffer more chronic disease than urban adults. The built environment (roads, housing, footpaths) can hinder or support physical activity, but we lack a way to easily measure 'walkability' in rural areas. This means it is hard to decide what to prioritise to better support active lifestyles. This project will explore walkability benchmarks and work collaboratively to co-design an online walkability assessment tool to help decide priority actions in rural areas.	Associate Professor Verity Cleland	Associate Professor Verity Cleland, Professor Anna Timperio, Doctor Kim Jose, Associate Professor Melanie Davern	Targeted competitive	1/06/2020	31/05/2024	MEDICAL AND HEALTH SCIENCES, Public health and health services, Public health and health services not elsewhere classified	Public Health Research	$ 570,968.50	Prior to 03/09/2024
MRF1200602	Preventive and Public Health Research	2019 Preventive and Public Health Research	University of Technology Sydney	University	NSW	The impact of neonatal care on long-term healthcare needs and outcomes	This project will examine how newborn care affects healthcare needs and costs over the first five years of a child's life.	Doctor Serena Yu	Doctor Serena Yu, Professor Kei Lui, Associate Professor Lynn Sinclair, Professor Denzil Fiebig, Doctor Vanessa Scarf, Professor Rosalie Viney	Targeted competitive	1/06/2020	30/11/2023	ECONOMICS, Econometrics, Econometric and statistical methods	Health Services Research	$ 163,840.00	Prior to 03/09/2024
MRF1200703	Preventive and Public Health Research	2019 Preventive and Public Health Research	University of Wollongong	University	NSW	Peer support for breastfeeding for Aboriginal women	This study involves using Aboriginal peer support workers to support Aboriginal women to initiate breastfeeding and to breastfeed over the first 6 months of life, by using face to face visits, and phone and video-chat. The study will involve six Aboriginal maternal and infant health services in NSW, where we will recruit 720 mother and baby pairs over a 5 year period. We also plan to interview Aboriginal women and their health carers to assess the support they received for breastfeeding.	Associate Professor Rowena Ivers	Associate Professor Rowena Ivers, Associate Professor Michelle Dickson, Professor Karen Charlton, Professor Lisa Jackson Pulver, Associate Professor Christine Catling, Professor Michael Dibley, Doctor Miranda Buck, Associate Professor Patrick Kelly	Targeted competitive	1/06/2020	30/11/2025	MEDICAL AND HEALTH SCIENCES, Nutrition and dietetics, Public nutrition intervention	Public Health Research	$ 1,530,350.01	Prior to 03/09/2024
MRF1200852	Preventive and Public Health Research	2019 Preventive and Public Health Research	Victoria University	University	VIC	Optimising the dose of exercise to promote improvements of cerebrovascular function and health in middle-aged adults	Exercise as a medical intervention can be an effective way to prevent many diseases. For example, exercise reduces the risk of dementia, which is linked with healthy brain blood flow. However, the correct prescription is critical to optimise the beneficial effects of exercise. This project aims to discover how different 'doses' of exercise affect brain vascular function and health, and translate this new knowledge into more individualised exercise prescriptions to better prevent dementia.	Doctor James Broatch	Doctor James Broatch, Professor David Bishop, Professor Amy Brodtmann	Targeted competitive	1/06/2020	31/05/2025	MEDICAL AND HEALTH SCIENCES, Human movement and sports science, Exercise physiology	Clinical Medicine and Science Research	$ 847,130.00	Prior to 03/09/2024
MRF1199902	Preventive and Public Health Research	2019 Targeted Health System and Community Organisation Research (Round 3)	Australian National University	University	ACT	Tools to value health change in paediatric populations	Our multidisciplinary team will deliver a program of methodological and applied research that will provide the Pharmaceutical Benefits Advisory Committee and other Commonwealth and State funders of health care with a confident basis to compare interventions in paediatric populations. Results will allow a broader use of the quality adjusted life year framework to inform policy and resource allocation in a population for which the current evidence has been unable to facilitate broad uptake.	Doctor Elisabeth Huyn	Doctor Elisabeth Huyn, Professor Kirsten Howard, Professor Stavros Petrou, Doctor Martin Howell, Professor Joanna Coast, Associate Professor Alison Hayes, Professor Jonathan Craig, Professor Germaine Wong, Professor Cam Donaldson	Targeted competitive	1/06/2020	30/09/2025	ECONOMICS, Applied economics, Health economics	Health Services Research	$ 2,215,268.00	Prior to 03/09/2024
MRF1200535	Preventive and Public Health Research	2019 Targeted Health System and Community Organisation Research (Round 3)	University of Sydney	University	NSW	Modelling five-year patterns in cancer incidence, staging and related health services	Health system costs for cancer are escalating as the population ages and new high-cost technologies are developed. Predicting changes in cancer trends will be critical to ensuring healthcare subsidies are based on the best evidence and targeted to patient need. Under this research scheme, Cancer Council NSW will build on its leading work in modelling complex cancer trends and related interventions.	Professor Karen Canfell	Professor Karen Canfell, Doctor Eleonora Feletto, Doctor Marianne Weber, Doctor Michael Caruana, Doctor Philip Haywood, Doctor Allison Pearce, Professor Kwun Fong, Mr David Goldsbury, Doctor Pietro Procopio, Doctor Julia Steinberg	Targeted competitive	1/06/2020	31/05/2025	MEDICAL AND HEALTH SCIENCES, Public health and health services, Preventive medicine	Public Health Research	$ 3,585,390.00	Prior to 03/09/2024
MRF1199701	Preventive and Public Health Research	2019 Targeted Health System and Community Organisation Research (Round 3)	University of Melbourne	University	VIC	PRedicting the population health economic IMpact of current and new CAncer Treatments (PRIMCAT)	Listing of new cancer treatments in the Pharmaceutical Benefits Scheme (PBS) and Medical Benefits Schedule has become a complicated undertaking, because of the uncertainty in the number of patients who may actually benefit from treatment and the financial implication for the health system. PRIMCAT will use a data-driven modelling approach to answer these questions for three nominated cancers (colorectal, melanoma and NSCLC) and for two pan-cancer mutations ahead of listing in the PBS and MBS.	Doctor Fanny Franchini	Doctor Fanny Franchini, Professor Yuting Zhang, Professor Peter Gibbs, Professor Sallie-Anne Pearson, Doctor Koen Degeling, Doctor Fanny Franchini, Professor Benjamin Solomon, Professor Grant McArthur, Professor Stephen Fox, Associate Professor Jayesh Desai	Targeted competitive	1/06/2020	31/03/2024	ECONOMICS, Applied economics, Health economics	Health Services Research	$ 2,322,794.95	Prior to 03/09/2024
MRF1200816	Preventive and Public Health Research	2019 Targeted Health System and Community Organisation Research (Round 3)	University of Melbourne	University	VIC	Measuring and valuing changes in child health to facilitate robust decision making	Decisions about health care rely on evidence that treatments work and are value for money. This project will produce better ways of measuring child health outcomes, so we have better evidence. Our results will help decision makers to 'weigh up' improved outcomes for adults and children when making spending decisions. Our research team are world leading experts in child health and measuring outcomes. We will provide a practical set of tools to help make good decisions about children's health care.	Professor Nancy Devlin	Professor Nancy Devlin, Associate Professor Richard Norman, Professor Rosalie Viney, Professor Julie Ratcliffe, Associate Professor Kim Dalziel, Associate Professor Brendan Mulhern, Professor Harriet Hiscock, Professor Deborah Street, Associate Professor Gang Chen	Targeted competitive	1/06/2020	28/02/2025	ECONOMICS, Applied economics, Health economics	Health Services Research	$ 2,352,349.50	Prior to 03/09/2024
MRF1199927	Preventive and Public Health Research	2019 Targeted Health System and Community Organisation Research (Round 3)	University of Sydney	University	NSW	Evidence on the clinical effectiveness and cost-effectiveness of digital breast tomosynthesis in identifying breast cancer compared to standard imaging in populations at risk of breast cancer	A multi-study research program on DIGITAL BREAST TOMOSYNTHESIS (DBT) will be done in public and private health services, to generate evidence on whether DBT is effective and cost-effective in diagnosing breast cancer compared to other imaging (mammography, ultrasound) in three groups of patients at risk of breast cancer: those with breast symptoms, or with previous breast cancer, or with a family history of breast cancer. Findings from this project will assist decisions on public funding of DBT. MRF2007507	Preventive and Public Health Research	2020 Maternal Health and First 2000 Days, Exercise and Nutrition and Early Childhood	Monash University	University	VIC	Optimising the delivery of antenatal interventions in public healthcare: Improving equity, access and engagement for better maternal and neonatal health outcomes	Increasing proportion of young women are commencing pregnancy overweight or obese. Research demonstrates that lifestyle interventions improve health during pregnancy and are cost effective, yet scale up into routine pregnancy care remains limited. Here we address this critical gap, supported by stakeholder and community engagement, by developing and enhancing digital technology to increase accessibility, usability and engagement across two Australian healthcare settings.	Doctor Cheryce Harrison	Doctor Cheryce Harrison, Professor Helena Teede, Professor Jennifer McIntosh, Associate Professor Emily Callander, Doctor Kirsten Palmer, Doctor Joanne Enticott, Professor Daphne Flynn, Associate Professor Lisa Moran, Professor Ben W. Mol, Doctor Siew Lim	Targeted competitive	1/06/2021	30/06/2026	MEDICAL AND HEALTH SCIENCES, Public health and health services, Preventive medicine	Health Services Research	$ 1,450,942.83	Prior to 03/09/2024
MRF2007450	Preventive and Public Health Research	2020 Efficient Use of Existing Medicines	La Trobe University	University	VIC	Repurposing valproate for the treatment of colorectal cancer	Colorectal cancer is a major cause of cancer related deaths for which there is an urgent need to develop new treatments. The drug valproate has been used to treat epilepsy and mood disorders for over 50 years. We have found that valproate can profoundly increase the anti-tumour activity of a class of drugs known as EGFR inhibitors in laboratory models of colon cancer. We will now test the activity of this drug combination in a phase II clinical trial in patients with advanced colon cancer.	Professor Niall Tebbutt	Professor Niall Tebbutt, Professor John Mariadason, Associate Professor Jeanne Tie, Doctor Katrin Sjoquist, Professor Timothy Price, Doctor matthew burge	Targeted competitive	1/06/2021	31/05/2025	MEDICAL AND HEALTH SCIENCES, Oncology and carcinogenesis, Cancer therapy (excl. chemotherapy and radiation therapy)	Clinical Medicine and Science Research	$ 751,884.70	Prior to 03/09/2024
MRF2007264	Preventive and Public Health Research	2020 Efficient Use of Existing Medicines	University of Melbourne	University	VIC	Repurposing BCL-2 inhibitors for immune manipulation to improve outcomes in allogeneic stem cell transplantation	Allogeneic (donor) stem cell transplantation is a curative therapy for blood cancers. Not everyone can safely have a transplant as the toxicity of the pre-transplant chemotherapy is too toxic. We have discovered in mouse models that by using the existing drug venetoclax we can reduce the intensity of the preparative chemotherapy. This makes the transplant safer yet as effective. In this project we will undertake this same approach in a clinical trial of patients undergoing transplantation.	Professor David Ritchie	Professor David Ritchie, Doctor Rachel Koldej	Targeted competitive	1/06/2021	31/05/2025	MEDICAL AND HEALTH SCIENCES, Immunology, Transplantation immunology	Clinical Medicine and Science Research	$ 599,595.60	Prior to 03/09/2024
MRF2007164	Preventive and Public Health Research	2020 Efficient Use of Existing Medicines	University of Sydney	University	NSW	MOTIVATE C: The Methodical evaluation and Optimisation of Targeted IncentiVes for Accessing Treatment of Early stage hepatitis C	Hepatitis C treatment is now well tolerated and highly effective, yet uptake in Australia remains low. Australia is trying to eliminate hepatitis C, which means interventions are required to increase treatment uptake of those infected with the virus. Financial incentives offer a simple, yet potentially effective, solution. This study will evaluate the effect of random allocation of financial incentives to improve treatment uptake in patients with hepatitis C.	Professor Thomas Snelling	Professor Thomas Snelling, Associate Professor Joseph Doyle, Doctor Wendy Cheng, Professor Margaret Hellard, Doctor Alisa Pedrana, Professor Joshua Davis, Mr Mark Jones, Associate Professor Penelope Abbott, Associate Professor Jane Davies, Professor Kirsten Howard	Targeted competitive	1/06/2021	30/11/2025	MEDICAL AND HEALTH SCIENCES, Public health and health services, Public health and health services not elsewhere classified	Public Health Research	$ 2,126,775.89	Prior to 03/09/2024
MRF2007182	Preventive and Public Health Research	2020 Efficient Use of Existing Medicines	University of New South Wales	University	NSW	A Prospective Randomised Controlled Trial of Adults with Perianal Fistulising Crohn's Disease and Optimised Therapeutic Infliximab Levels: PROACTIVE Trial	The study aims to optimise treatment in adults suffering with Crohn's perianal fistulae. The study will compare individualised to standard dosing of current best care medication, infliximab. Individualised dosing will use routinely collected blood drug levels to guide the dose of infliximab given, with the aim to achieve higher blood drug level targets. This new approach is expected to enhance fistula healing, reduce symptom burden, and improve costs; but these benefits have yet to be assessed.	Associate Professor Susan Connor	Associate Professor Susan Connor, Associate Professor Nik Ding, Associate Professor Miles Sparrow, Associate Professor Peter De Cruz, Professor Ailsa Hart, Associate Professor Niels Vande Casteele, Doctor Jordi Rimola, Mr Basil D'Souza, Professor Danny Liew, Doctor Frances Garden	Targeted competitive	1/06/2021	31/05/2027	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Gastroenterology and hepatology	Clinical Medicine and Science Research	$ 834,374.30	Prior to 03/09/2024
MRF2006488	Preventive and Public Health Research	2020 Efficient Use of Existing Medicines	The University of Queensland	University	QLD	A novel use of sterile water for injection to relieve pain in labour	Medical pain relief options for labour have changed little in 50 years. While epidurals are effective other options such as opioids or (laughing) gas are often ineffective and all come with unwanted side effects. Our placebo-controlled trial will test the use of injections of sterile water to relieve contraction pain in labour; proven by our team as safe and effective for back pain in labour. If successful the trial will provide a simple and safe choice for labour pain relief.	Doctor Nigel Lee	Doctor Nigel Lee, Professor Sue Kildea, Professor Lena Martensson, Associate Professor Yu Gao, Professor Leonie Callaway, Doctor Belinda Barnett	Targeted competitive	1/06/2021	31/01/2026	MEDICAL AND HEALTH SCIENCES, Nursing, Midwifery	Clinical Medicine and Science Research	$ 302,942.48	Prior to 03/09/2024
MRF2007155	Preventive and Public Health Research	2020 Efficient Use of Existing Medicines	University of New South Wales	University	NSW	A Phase III randomised placebo-controlled trial of mirtazapine as a pharmacotherapy for methamphetamine ("Ice") dependence	Crystalline methamphetamine ("Ice") is a growing concern in Australia. There are no approved medications that can be used to treat dependence on this drug. This clinical trial will examine whether mirtazapine, a newly identified treatment agent for methamphetamine use, can be used safely and effectively in routine clinical care to manage methamphetamine dependence in Australia.	Associate Professor Rebecca McKetin	Associate Professor Rebecca McKetin, Professor Michael Farrell, Professor Louisa Degenhardt, Professor Gregory Dore, Professor Steven Shoptaw, Associate Professor Peter Kelly, Doctor Alyna Turner, Doctor Philip Clare, Doctor Shalini Arunogiri, Ms Samantha Colledge	Targeted competitive	1/06/2021	30/11/2025	MEDICAL AND HEALTH SCIENCES, Public health and health services, Mental health	Public Health Research	$ 4,899,579.86	Prior to 03/09/2024
MRF2007502	Preventive and Public Health Research	2020 Efficient Use of Existing Medicines	University of Sydney	University	NSW	Cost-Utility Comparison of Down-Titration Strategies for Safer and More Efficient Use of Biologics in Adults with Rheumatoid Arthritis and Psoriatic Arthritis	Rheumatoid arthritis and psoriatic arthritis can cause severe pain, joint destruction, disability and early death. Biologic drugs can improve these arthritis health outcomes but may also have serious side effects, are very costly and are not cures. Drug-free remission is the next best outcome. This trial aims to identify the optimum dosing strategies for safer and more efficient biologic drug use to help more people with rheumatoid and psoriatic arthritis achieve a drug-free remission.	Professor Lyn March	Professor Lyn March, Professor Rachelle Buchbinder, Professor Marissa Lassere, Professor Susanna Proudman, Professor Ranjeny Thomas, Professor Deborah Schofield, Doctor Meilang Xue, Associate Professor Mihir Wechalekar, Doctor Samuel Whittle, Doctor Premarani Sinnathurai	Targeted competitive	1/06/2021	31/05/2027	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Rheumatology and arthritis	Clinical Medicine and Science Research	$ 2,720,942.80	Prior to 03/09/2024

MRF2007157	Preventive and Public Health Research	2020 Efficient Use of Existing Medicines	Melanoma Institute Australia	Medical Research Institute	NSW	NADINA Phase 3 trial comparing response driven neo-adjuvant combination of ipilimumab + nivolumab versus adjuvant nivolumab	Standard care for melanoma spread to lymph nodes is surgery followed by 1 year of drug to prevent recurrence. A drug used in many cancers, immunotherapy, cost Australia $688 million in 2020. This study will test a safe and cost-effective way to prevent recurrence with just 6 weeks of immunotherapy before surgery. If the tumour is destroyed, major surgery and more drug therapy can be avoided. A shorter course of drug therapy will reduce healthcare costs by nearly 50%.	Professor Georgina Long	Professor Georgina Long, Professor Richard Scolyer, Professor Grant McArthur, Associate Professor Alexander Menzies, Professor Andrew Spillane, Associate Professor Matteo Carlino, Associate Professor David Gyorki, Associate Professor Robyn Saw, Associate Professor Serigne Lo, Professor Rachael Morton	Targeted competitive	1/06/2021	31/05/2025	MEDICAL AND HEALTH SCIENCES, Oncology and carcinogenesis, Cancer therapy (excl. chemotherapy and radiation therapy)	Clinical Medicine and Science Research	$ 2,023,376.40	Prior to 03/09/2024
MRFQI000043	Preventive and Public Health Research	2020 Quality, Safety and Effectiveness of Medicine Use and Medicine Intervention by Pharmacists	University of Sydney	University	NSW	A Systems approach to enhancing community-based medication review	This proposal will enhance the quality use of medicines in primary care by building better systems for pharmacists and GPs to work together by establishing multi-disciplinary Medication Therapeutics Committees in Primary Health Networks (PHN) and through better integration of professional pharmacy services. At the patient level, individuals at high risk of medication harm will be recruited to receive a medication review and other support services after discharge. At the system level, quality use of medicine indicators will be monitored and pharmacists and GPs supported to provide optimal medication management. A stepped-wedge cluster randomised trial will be used with the main hypothesis being a reduction in hospital readmissions. MRFQI000008	Preventive and Public Health Research	2020 Quality, Safety and Effectiveness of Medicine Use and Medicine Intervention by Pharmacists	University of Sydney	University	NSW	Pharmacy-based screening and quality use of medicines in kidney disease	Chronic Kidney Disease (CKD) is a growing public health concern with over 1.7 million Australians unaware that they have indicators of CKD. Community pharmacists in Australia are a largely untapped health resource for the identification and management of patients with CKD. The overall goal is to screen people for CKD via community pharmacies and provide a quality use of medicines service which includes identifying medications that are potentially inappropriate (as per the kidney function) and/or nephrotoxic and provide recommendations to optimise use of medications. The benefits include reduced medication-related harm; improved public knowledge and awareness of CKD risk factors; and expanded public health roles for community pharmacists. MRFCDDM000003	Preventive and Public Health Research	2023 Targeted Translation Research Accelerator – Cardiovascular Disease and Diabetes Mechanisms	The Garvan Institute of Medical Research	Medical Research Institute	NSW	Repurposed Semaglutide to Bridge the T1d Cardiovascular Risk Gap	This phase II randomised placebo-controlled clinical trial will assess if semaglutide, a once-weekly glucagon-like peptide 1 receptor agonist with cardiovascular (CV) protective properties, can reduce arterial stiffness (an indirect measure of CV disease) in people with type 1 diabetes (T1d) and high CV risk. This small scale study, will determine if semaglutide, a type 2 diabetes medication known to reduce CV risk, can be innovatively repurposed as an adjunct in T1d. This study will also determine whether physiological determinants of CV risk mediate the effect of semaglutide in T1d. Further, we join with industry (Novo Nordisk), diabetologists, CV scientists, national diabetes associations and consumers to tackle research translation.	Professor Jerry Richard Greenfield	Professor Jerry Richard Greenfield, Doctor Jennifer Rebecca Snaith, Associate Professor Samantha Hocking, Doctor Ruth Agnes Frampton, Professor Chris Hayward, Doctor Audrey Adji, Doctor Nick Olsen, Mr David Burren, Professor Michael Horowitz, Professor Deborah Jane Holmes-Walker, Professor Karen Jones, Professor Sallie-Anne Pearson, Professor Richard Osborne Day, Professor Emad Munir El-Omar	Open competitive	26/06/2024	29/06/2026	Not available	Not available	$ 916,315.00	Prior to 03/09/2024
MRFCDDM000007	Preventive and Public Health Research	2023 Targeted Translation Research Accelerator – Cardiovascular Disease and Diabetes Mechanisms	The University of Adelaide	University	SA	Diabetic heart failure: focus on the coronary microvascular glycocalyx	The goal of the current research program is to determine the role of microvascular glycocalyx, the hair-like acellular layer in the vascular lumen, in the development of heart failure in patients with Type 2 diabetes. This will be achieved via several related pre-clinical and clinical projects, using rodent models that we have well-characterised and novel clinical cardiac imaging. We hope to unveil how the microvascular glycocalyx, once thought to be merely a physical barrier to fluid extravasation and gas exchange, actually becomes dysfunctional and controls the pathophysiology and functional outcomes of heart failure in Type 2 diabetes. We will also develop specific therapeutics to limit glycocalyx shedding in the rodent models.	Doctor Cher-Rin Chong	Doctor Cher-Rin Chong, Associate Professor Betty Raman, Doctor Thanh Ha Nguyen, Emeritus Professor John David Horowitz	Open competitive	25/06/2024	31/12/2026	Not available	Not available	$ 999,536.00	Prior to 03/09/2024
MRFCDDM000009	Preventive and Public Health Research	2023 Targeted Translation Research Accelerator – Cardiovascular Disease and Diabetes Mechanisms	The University of Adelaide	University	SA	Sweet tasting kidneys – a novel pathway in glucose homeostasis	This project addresses a major knowledge gap in understanding how the widespread use of low-calorie sweeteners (LCS) in foods and beverages increases the risk of type 2 diabetes. Our novel observations in human kidney cells, mice and healthy participants indicate that kidney-excreted LCS can reduce urinary glucose excretion by triggering sweet taste receptors within the kidneys, which may disrupt control of blood glucose. We will conduct a double-blind, randomised controlled trial in people with and without type 2 diabetes to inform consumers, health professionals, policymakers, and industry on this risk. We will also employ a unique genetic mouse line to investigate the potential for targeting this pathway for glycaemic benefit.	Associate Professor Tongzhi Wu	Associate Professor Tongzhi Wu, Associate Professor Richard Lewis Young, Professor Christopher Keith Rayner, Professor Merlin Christopher Thomas, Professor Caroline Louise Miller, Doctor Cong Xie, Doctor Weikun Huang	Open competitive	25/06/2024	31/12/2026	Not available	Not available	$ 999,733.00	Prior to 03/09/2024
MRFCDDM000012	Preventive and Public Health Research	2023 Targeted Translation Research Accelerator – Cardiovascular Disease and Diabetes Mechanisms	University of Melbourne	University	VIC	Unlocking the potential of novel therapies in treating diabetes and obesity	Type 2 diabetes and obesity present significant challenges in Australia, affecting 1.2 million individuals and incurring $2 billion annually. Limited access to medications worsens health disparities, especially among Indigenous populations. mRNA-based therapies offer promise by directing cells to produce specific hormones, potentially revolutionizing treatment with fewer side effects and lower costs. The project aims to explore mRNA therapies' role in regulating glucose metabolism, with pre-clinical evidence showing promise in mice. A multidisciplinary team seeks to assess the feasibility of mRNA therapies through pre-clinical programs and partnerships, aiming to improve health outcomes and potentially reshape clinical recommendations. MRFCDDM000033	Preventive and Public Health Research	2023 Targeted Translation Research Accelerator – Cardiovascular Disease and Diabetes Mechanisms	The University of Queensland	University	QLD	Glycaemic variability: a culprit cause of heart disease in diabetes	This project investigates the role of glycaemic variability as a primary culprit effecting the health of heart muscle in patients living with diabetes. We will study how fluctuations in blood glucose, as opposed to average glucose levels, result in adverse heart health outcomes, including increased risk of death after a heart attack. Bridging between preclinical modelling and clinical samples, we evaluate how glycaemic variability effects heart health, develop new therapeutics to reduce mortality rates, and link glycaemic variability to the prognosis of cardiac injury in patients with diabetes. The outcomes aim to improve management strategies, reduce heart failure incidences, and decrease mortality rates in patients with diabetes.	Associate Professor Nathan Palpant	Associate Professor Nathan Palpant, Associate Professor Kirsty Short, Professor Glenn King, Associate Professor Sean Lal, Doctor Liza Phillips, Doctor Meagan Carney, Doctor Christian Verdicchio, Cyndy Nauer, Matthew Foster, Kerry Doyle PSM OAM	Open competitive	25/06/2024	29/06/2026	Not available	Not available	$ 969,084.00	Prior to 03/09/2024
MRFCDDM000044	Preventive and Public Health Research	2023 Targeted Translation Research Accelerator – Cardiovascular Disease and Diabetes Mechanisms	Monash University	University	VIC	Advancing the novel drug target gp130 to treat cardiometabolic disease	Over 3 million Australians are living with diabetes and of those hospitalised, cardiovascular disease (CVD) is the most common comorbidity. While there has been tremendous advancement in drug therapy to treat both CVD and type 2 diabetes (T2D), front line drugs such as statins to treat CVD and GLP-1 agonists to treat T2D are not appropriate for all patients due to significant side effects. Our group has invented a new drug called IC7Fc and is studying the effects of another drug we helped developed called Olamkicept. Both drugs may effectively treat CVD and/or T2D without the side effects observed with the current therapies, providing a breakthrough in treatment. We will study these drugs in both pre-clinical and clinical experiments. MRFCDDM000049	Preventive and Public Health Research	2023 Targeted Translation Research Accelerator – Cardiovascular Disease and Diabetes Mechanisms	Flinders University	University	SA	Impact of excess folic acid on the pathogenesis of Gestational Diabetes	This project will establish robust understanding of the impact of excess folic acid intake on the rising incidence of gestational diabetes mellitus (GDM). We will leverage both our existing and proposed human pregnancy cohorts and placenta models to elucidate the mechanisms by which excess folic acid alters maternal insulin sensitivity and glucose homeostasis, thus contributing to risk of GDM. We will demonstrate direct effects of excess folic acid in vitro on placental growth, differentiation, hormone secretory function and oxidative stress. The data will explain perturbed hormone profiles in vivo in mothers with high folate status and folic acid supplementation in cases of GDM in our cohorts and underpin future screening and prevention. MRF2032099	Primary Health Care Research	2023 Primary Health Care Research	University of Melbourne	University	VIC	Promoting Safer Families: Strengthening primary care to sustainably address domestic and family violence	Domestic and family violence damages the health of families, particularly women and their children. We aim to make all families safer by generating new knowledge from a world first trial of resourcing primary care to respond to this chronic social problem. We will provide health funding and help practitioners with decisions about referrals. This evidence informed response aims to assist women and their children to seek tailored help, supported by a novel peer survivor care navigator workforce.	Professor Kelsey Hegarty	Professor Kelsey Hegarty, Professor Douglas Boyle, Associate Professor Patty (Panagiota) Chondros, Doctor Patricia Cullen, Doctor Renee Fiolet, Professor Lisa Gold, Associate Professor Leesa Hooker, Associate Professor Caroline Johnson, Doctor Minerva Kyei-Onanjiri, Associate Professor Jo-Anne Manski-Nankervis, Doctor Rita McMorrow, Professor Lena Sanci, Doctor Lata Satyen, Associate Professor Laura Tarzia, Professor Cathy Vaughan	Targeted competitive	1/03/2024	31/12/2028	HEALTH SCIENCES, Health services and systems, Family care; HEALTH SCIENCES, Health services and systems, General practice	Health Services Research	$ 2,638,296.90	Prior to 03/09/2024
MRF2032101	Primary Health Care Research	2023 Primary Health Care Research	University of Sydney	University	NSW	Implementation of a PAthway of CarE for people with chronic musculoskeletal conditions living in RURAL and remote Australia using allied telehealth (PACE-RURAL)	This study will implement a new care pathway for Australians with burdensome musculoskeletal disorders living in rural and remote locations. We will identify people who may recover well or poorly, using a simple online tool at the point of care. Those who are likely to recover well can be guided by the online resource (Mypainhub.com) providing accurate advice and exercises to aid recovery. People needing extra care will be provided early virtual access to an expert allied health clinician.	Professor Trudy Rebbeck	Professor Trudy Rebbeck, Doctor Darren Beales, Professor Ian Cameron, Doctor Michelle Cottrell, Doctor Katie de Luca, Doctor Kerrie Evans, Doctor Robyn Fary, Associate Professor Joanne Kemp, Doctor Liliana Laranjo, Doctor Andrea Mosler, Professor Michael Nicholas, Professor Trevor Russell, Doctor Lisa Sharwood, Professor Michele Sterling, Mr Robert Waller	Targeted competitive	1/03/2024	30/06/2029	HEALTH SCIENCES, Health services and systems, Implementation science and evaluation; HEALTH SCIENCES, Health services and systems, Primary health care	Health Services Research	$ 2,505,877.15	Prior to 03/09/2024
MRF2032215	Primary Health Care Research	2023 Primary Health Care Research	The University of New England	University	NSW	Exploring the benefit of multidisciplinary primary care	This project will explore whether, compared to stand-alone general practices, multidisciplinary primary care practices are more effective and cost-effective for the care of chronic and complex conditions. The project will use general practice data that is linked with hospitalisation data to explore processes of care and outcomes related to management of selected chronic conditions. Qualitative data will be used to describe the models of care.	Professor Constance Pond	Professor Constance Pond, Professor Simon Bell, Doctor Anthea Bill, Professor Mariko Carey, Doctor Andrea Coda, Doctor Marianne Coleman, Professor Ritin Fernandez, Professor Nicholas Goodwin, Doctor Graeme Horton, Professor Kate Laver, Doctor Christopher Oldmeadow, Associate Professor Joel Rhee, Doctor Zoi Triandafillidis, Professor Stuart Wark, Professor Anna Williams	Targeted competitive	1/03/2024	30/06/2029	HEALTH SCIENCES, Health services and systems, General practice; HEALTH SCIENCES, Health services and systems, Multimorbidity; HEALTH SCIENCES, Health services and systems, Primary health care	Health Services Research	$ 1,744,251.10	Prior to 03/09/2024

MRF2032268	Primary Health Care Research	2023 Primary Health Care Research	University of Sydney	University	NSW	Healthy Back: building capacity and safe access to integrated primary care support options for people living in rural areas with chronic back pain and healthy lifestyle risks	Low back pain causes huge suffering and often coincides with lifestyle risks for chronic disease. Yet many people with low back pain and lifestyle risks do not receive care to manage both. The challenge to access appropriate care is even harder for people in rural regions. Our research will test if a co-designed adaptation of an effective lifestyle program can be scaled in rural primary care to support populations with lifestyle risks and disability from low back pain.	Associate Professor Christopher Williams	Associate Professor Christopher Williams, Professor Ross Bailie, Doctor Jodie-Lee Bailie, Professor David Beard, Professor Rachelle Buchbinder, Doctor Aidan Cashin, Professor Victoria Flood, Doctor Mohammad Hamiduzzaman, Professor Steven Kamper, Professor Chris Maher, Professor James McAuley, Doctor Vanette McLennan, Professor Megan Passey, Professor Sue Randall, Associate Professor Sze Lin Yoong	Targeted competitive	1/03/2024	31/12/2029	HEALTH SCIENCES, Health services and systems, Digital health; HEALTH SCIENCES, Health services and systems, Primary health care; HEALTH SCIENCES, Health services and systems, Rural and remote health services	Health Services Research	$ 1,985,395.85	Prior to 03/09/2024
MRF2032273	Primary Health Care Research	2023 Primary Health Care Research	Monash University	University	VIC	Scalable internet-delivered primary care for shoulder pain with or without telehealth support	People who suffer shoulder pain can be severely disabled for months or years. Current management in Australian primary care is not evidence based. Some people are sent directly for avoidable surgery. Others receive inappropriate non-surgery care. And yet others cannot access care due to their geographical location. We have developed convenient internet-delivered care that is high quality for shoulder pain. We now seek to test whether this care is better than usual care in randomized trial.	Associate Professor Peter Malliaras	Associate Professor Peter Malliaras, Professor Frada Burstein, Professor Andrew Forbes, Professor Nadine Foster, Professor Terrence Haines, Professor Ian Harris, Professor Chris Littlewood, Doctor Joshua Zadro	Targeted competitive	1/03/2024	31/08/2029	HEALTH SCIENCES, Health services and systems, Digital health; HEALTH SCIENCES, Allied health and rehabilitation science, Physiotherapy	Health Services Research	$ 1,277,299.95	Prior to 03/09/2024
MRF2035694	Primary Health Care Research	2023 Multidisciplinary Models of Primary Care	Macquarie University	University	NSW	An equity-focused prospective evaluation of patient registration in Australia	This project provides an evaluation of the introduction of patient registration in Australia under the MyMedicare scheme. By collaborating with diverse community, consumer, service provider and policy partners, the project will provide actionable evidence over a period of five years that informs the ongoing introduction of the scheme. A central focus of this evaluation is examining equitable access to and gains from MyMedicare in improving care continuity among the diverse Australian population.	Professor Sanjyot Vagholkar	Professor Sanjyot Vagholkar, Professor Jeffrey Braithwaite, Doctor Ashfaq Chauhan, Doctor Kate Churruca, Professor Henry Cutler, Professor Reema Harrison, Doctor Phyllis Lau, Doctor Janani Mahadeva, Professor Elizabeth Manias, Professor Rebecca Mitchell, Doctor Bronwyn Newman, Associate Professor Magdalena Raban, Mr Samuel Ricketts, Doctor Ramya Walsan, Professor Johanna Westbrook	Targeted competitive	1/11/2024	31/10/2029	HEALTH SCIENCES, Health services and systems, Health systems;	Health Services Research	$ 998,386.20	
MRF2036251	Primary Health Care Research	2023 Multidisciplinary Models of Primary Care	University of New South Wales	University	NSW	MyMedicare for older adults living in residential aged care homes: mixed-methods evaluation	We will conduct a comprehensive evaluation of MyMedicare registration of older adults living in residential aged care homes (RACH). We will: (i) identify subgroups that have a lower uptake and explore the reasons behind this; (ii) examine the impact of MyMedicare on healthcare delivery and health outcomes; (3) determine the influence of MyMedicare on health provider behaviour and teamwork; (4) examine patients/caregivers reported outcomes; and (5) determine its cost-effectiveness.	Associate Professor Joel Rhee	Associate Professor Joel Rhee, Associate Professor Margo Barr, Professor Mariko Carey, Doctor Paresh Dawda, Professor Susan Gordon, Doctor Benjamin Harris-Roxas, Doctor Jitendra Jonnagaddala, Professor Michael Kidd, Doctor Andrew Knight, Doctor Sophia Lin, Professor Constance Pond, Doctor Anurag Sharma, Doctor Chun Wah Michael Tam, Doctor Anna Williams, Professor Nicholas Zwar	Targeted competitive	1/11/2024	31/10/2029	HEALTH SCIENCES, Health services and systems, General practice;	Health Services Research	$ 1,000,000.00	
MRF2036232	Primary Health Care Research	2023 Multidisciplinary Models of Primary Care	University of New South Wales	University	NSW	Unlocking the power of linked data to improve patient journeys across the health system	Multidisciplinary care relies of sharing information across different health services, but in Australia it has been tough to do this safely and easily. Lumos is a program that tracks patient journeys by collecting data from GP clinics and linking it with other health data. It covers 5 million people in NSW. This project will use Lumos to identify high-risk groups in need of care, give health services evidence on how to improve care, and inform investment decisions on large-scale health reforms.	Professor David Peiris	Professor David Peiris, Mr Tristan Bouckley, Doctor Anthony Brown, Doctor Anna Campaign, Ms Patricia Correll, Professor Stephen Jan, Professor Louisa Jorm, Professor Michael Kidd, Doctor Andrew Knight, Doctor Viola Korczak, Doctor Sanja Lujic, Doctor Gill Schierhout, Ms Anna Stephens, Doctor Heidi Welberry, Doctor Rosemary Wyber	Targeted competitive	1/11/2024	31/10/2029	HEALTH SCIENCES, Health services and systems, Health services and systems not elsewhere classified	Health Services Research	$ 3,967,959.50	
MRF2036236	Primary Health Care Research	2023 Multidisciplinary Models of Primary Care	Bond University Limited	University	QLD	An automatic electronic frailty index in Australian primary care and a toolkit for action	This project aims to help older Australians to remain living at home and independently by informing them about their frailty status, and available interventions. Using existing GP data, it will develop an individualised frailty status for patients. Our Frailty Toolkit will then be developed and implemented in an accessible format so that patients can understand what their frailty score means and what actions they could implement to prevent or slow the decline of their frailty.	Professor Mark Morgan	Professor Mark Morgan, Miss Anja Christoffersen, Professor Andrew Clegg, Professor Tracy Comans, Doctor Alexandra Davidson, Doctor Paresh Dawda, Professor Reema Harrison, Professor Sarah Hilmer, Professor Ruth Hubbard, Doctor Lisa Kouladjian O'Donnell, Doctor Kristiana Ludlow, Doctor Natasha Reid, Doctor Jerneja Sveticic, Doctor David Ward, Doctor Adrienne Young	Targeted competitive	1/11/2024	31/10/2029	BIOMEDICAL AND CLINICAL SCIENCES, Clinical sciences, Geriatrics and gerontology;	Health Services Research	$ 3,380,039.10	
MRF2036262	Primary Health Care Research	2023 Multidisciplinary Models of Primary Care	Monash University	University	VIC	Australian Primary caRe Initiative for mediCine use Optimisation and safeTy (APRICOT)	Medication-related problems are a major cause of patient harm in general practice. The proposed study involves developing and validating quality indicators for prescribing and consumer education targeting support for medicine self-management. The indicators and educational intervention will be developed with consumer and stakeholder input. These will be evaluated in general practice clinics in New South Wales, Victoria and Tasmania in a 3-year trial, with economic and implementation evaluation.	Associate Professor Johnson George	Associate Professor Johnson George, Professor Simon Bell, Doctor Amanda Cross, Doctor Alana, Delaforce, Ms Kali Godbee, Professor Danny Hills, Doctor Rajiv Jayasena, Professor Ajay Mahal, Professor Elizabeth Manias, Doctor Eldho Paul, Professor Gregory Peterson, Professor Constance Pond, Professor Janette Radford, Professor Bandana Saini, Doctor Marlien Varnfield	Targeted competitive	1/11/2024	31/10/2029	HEALTH SCIENCES, Health services and systems, Primary health care;	Health Services Research	$ 3,999,470.60	
MRF2036219	Primary Health Care Research	2023 Multidisciplinary Models of Primary Care	Curtin University	University	WA	Remote and Regional Health Monitoring Platform	RHOMP builds on existing datasets in WA to deliver a data platform that will enable access to timely data to identify and action areas of health inequality in Western Australia. The platform will result in two major deliverables: 'RHOMP interactive' for policy makers and service providers and 'RHOMP research environment' for researchers. Underpinning these is a 'live' data asset with automated timely updates to enable service providers to be responsive to variation in service need.	Doctor Sharmani Barnard	Doctor Sharmani Barnard, Professor Timothy Carey, Doctor Joseph Cuthbertson, Doctor Abby Harwood, Associate Professor Delia Hendrie, Professor Andrew Maiorana, Doctor Rochelle Menzies, Professor Christopher Reid, Professor Daniel Rock, Doctor Cara Sheppard, Doctor Elizabeth Thomas, Miss Kaylie Toll, Doctor Dan Xu, Doctor Justin Yeung	Targeted competitive	1/11/2024	31/10/2029	HEALTH SCIENCES, Health services and systems, Health services and systems not elsewhere classified	Public Health Research	$ 3,611,430.25	
MRF9100016	Rapid Applied Research Translation	2018 Rapid Applied Research Translation (Round 2.1)	South Australian Health and Medical Research Institute Limited	Medical Research Institute	SA	Health Translation SA – MRFF Rapid Applied Research Translation, Stage 2.1	The SA Centre Transformative Translational Research projects outlined in this application address SA Centre priority areas and issues associated with the successful implementation of a State-wide translational health 'pipeline' to help bridge the gaps that lie between the different stages of translating new, evidence-based discoveries into standard healthcare practice. The SA Centre has identified eight projects, listed below, that are aligned with MRFF priority areas and focus on key health areas - colorectal cancer (Project 1), stroke (Project 3), diabetes (Project 8), Aboriginal health (Project 4 and 6), mental health (Project 7). These projects focus on integration of research, education and clinical care by building capacity across the three sectors. Additionally, they all consider the interface between policy makers, consumers and other key stakeholders and are focused on driving impact across the state. The SA Centre is collaboratively driving the implementation of these targeted research and translation projects in its priority areas, which in a short period of time will achieve significant outcomes. Project 1 Improving wait times between a positive faecal immunochemical test (+FIT) and diagnostic colonoscopy: <120 days for all (Lead: Dan Worthley) Project 2 Translating evidence-based chronic breathlessness intervention services to South Australia: personal, clinical and cost effectiveness (Lead: Kylie Johnston) Project 3 Acting fast to increase time-critical stroke treatments to all South Australians (Lead: Susan Hillier) Project 4 Safely sleeping Aboriginal babies in South Australia – doing it together (Lead: Julian Grant) Project 5 Healthy South: Testing the feasibility of the rapid translation of Health in All Policies (HiAP) ideas to create healthy urban environments, create health promoting health services and stem the non-communicable disease epidemic in the Southern area of Adelaide (Lead: Fran Baum) Project 6 Engaging with Aboriginal People to Improve Kidney Care and Outcomes in South Australia (Lead: Janet Kelly) Project 7 Implementing a decision support tool to facilitate early access to community-based care for people with severe mental illness (Lead: Niranjan Bidargaddi) Project 8 Initiation of a novel in-hospital intervention for patients with Type 2 diabetes (Lead: Gary Wittert) At a national level, the SA Centre will work with other Centres in the Australian Health Research Alliance to build capacity in five agreed national priority areas. The provision of support from the MRFF for these National System Level	Not applicable	Not available	One-off/ad hoc	9/01/2019	31/12/2022	Not available	Not available	$ 2,000,000.00	Prior to 03/09/2024
MRF9100003	Rapid Applied Research Translation	2018 Rapid Applied Research Translation (Round 2.2)	Monash University	University	VIC	Monash Partners Advanced Health Translation Centre – MRFF Rapid Applied Research Translation, Stage Two	Our Transformative Translational Research projects will: build capacity for data driven health care improvement through a pilot of health research data innovation hubs in MP health service partners, develop models for visual representation of clinical/registry to improve access and utilisation by clinicians, consumers and managers, and develop a strategic approach to natural language processing across the MP health services. We will also build capacity and progress primary care data integration for health care improvement. In health services research and implementation we will build workforce capacity for culturally responsive practices across Monash Partners health services and undertake research and translation on workforce capacity building for health systems improvement and sustainability. Ground-breaking clinical and community driven innovation initiatives will lead the way including the development and translation of innovations in health care: an Australian first robotic exoskeleton to allow minimally invasive surgery for children; non-invasive wearable technology to detect seizure events in patients with epilepsy; a point-of-care device to detect elevated troponin-1 levels indicating heart attack and inform decision making regarding hospitalisation; and a new approach to assessment of bone healing, eliminating the need for X-Ray or CT, to guide when mobilisation can occur. Our innovative flagship initiatives will provide seed funding to identify readily translatable resources to improve health outcomes for our community, including a model of care to improve care transition for older people, programs to enhance the mental health of postnatal women and support identification and education of women at high risk of heart disease. Three flagships will promote efficient use of data resources to support improved clinical care and health outcomes related to pressure injury assessment and care; anti-microbial resistance; prostate, lung and pancreatic cancer and emergency department care. Care for patients with chronic illness will be improved through a smartphone App enabling MS patients to monitor their symptoms; identifying causes of hypertension; and improving acceptability of interventions for parents who use addictive substances. MP strategic prioritised research will develop a training program to build capacity for non-interventional clinical research, progress translation of MP funded projects and develop tools and resources for this purpose,	Not applicable	Not available	One-off/ad hoc	1/07/2019	31/12/2024	Not available	Not available	$ 4,131,439.00	Prior to 03/09/2024
MRF9100000	Rapid Applied Research Translation	2018 Rapid Applied Research Translation (Round 2.2)	The University of Queensland	University	QLD	Brisbane Diamantina Health Partners – MRFF Rapid Applied Research Translation, Stage Two	Transformative Translational Research: Funding is sought for six research projects for inclusion in the BDHP Transformative Translational Research Program 2019 – 2021. The proposed projects will deliver health system improvements, better patient outcomes and cost efficiencies for the health system. The projects align with MRFF, BDHP and Queensland Department of Health, priorities. They meet the requisite objectives and desired outcomes outlined in the current MRFF guidelines, addressing specific knowledge gaps in health, demonstrating clinical significance with potential for scalability and building workforce capacity. The projects also demonstrate scientific robustness and appropriate research methodology and design. Further, they demonstrate strong transdisciplinary collaboration and meaningful consumer and community involvement. The proposed projects, selected through a rigorous two-stage assessment process, are led by clinician-researchers across the hospital-community care continuum and the translational research spectrum, with deliverable objectives and outputs within the RART timeframe. National System Level Initiatives: Funding is sought to support BDHP's continued consultation and collaboration with the other eight Translation Research Centres to further the National System Level Initiatives (NSLI). BDHP will again actively participate in the four key NSLIs and the recently identified Wound care initiative. The four NSLI - Health Systems Improvement and Sustainability Framework, Data Driven Healthcare Improvement, Indigenous Research Network and Capacity Building, and Community Involvement in Health Research will be progressed into 2020. BDHP will continue with the work program as: co-lead for the Health Systems Improvement and Sustainability Framework initiative with Maridulu Budyari Gumal and the NSW Regional Health Partners; co-lead for the Wound Care initiative with the Western Australian Health Translation Network (WAHTN). In addition, BDHP will also continue to participate in the areas of Aged Care and Women's Health, as identified by the Australian Health Research Alliance (AHRA). BDHP coordinates the Aged Care Translation Research and Impact Network. Collaborative work programs across all the initiatives will engage community and consumers and integrate system-wide learning.	Not applicable	Not available	One-off/ad hoc	1/07/2019	30/06/2023	Not available	Not available	$ 4,110,000.00	Prior to 03/09/2024
MRF9100004	Rapid Applied Research Translation	2018 Rapid Applied Research Translation (Round 2.2)	University of Melbourne	University	VIC	Melbourne Academic Centre for Health – MRFF Rapid Applied Research Translation, Stage Two	TTR Activities - TTR EXPANSION activities: The EXPANSION activities for each of these projects will build on translational research to strengthen patient outcomes and enhance the national scalability and implementation across the AHRA network. This opportunity is offered for EXPANSION activities only and not for existing project activities. A1 – BIVARD: EXPANSION - Tenecteplase versus Alteplase for Stroke Thrombolysis Evaluation Trial in the Ambulance (TASTEa) A2 – BURCHILL: EXPANSION - Closing the gap on Indigenous cardiovascular (CV) health: Improving community outcomes through high impact policy relevant research. A3 – DEANE: EXPANSION - Liberal glUcose Control in critically Ill patients with pre-existing type 2 Diabetes (LUCID): a phase IIB multi-centre parallel group randomised clinical trial A4 – DUQUE: EXPANSION - Integrating Osteoporosis in Primary Care: The Osteoporosis Risk and Management (ORMA) Project A5 – HISCOCK: EXPANSION - Improving the care of children with frequent asthma admissions through partnerships with hospitals, GPs, and families. A6 – NELSON: EXPANSION - Future Health Today Project-Co-design of Prototype - New investigator-led projects A8 – BRODTMANN: Preventing post-stroke dementia and brain atrophy with exercise: The Post Ischaemic Stroke Cardiovascular Exercise Study (PISCES) A9 – CASTLE: Evaluating the impact of a psychological intervention to reduce the severe stress and psychological morbidity of people with chronic kidney disease: The Kidney Optimal Health Program (KOHP): Stage 2 A10 – EXINCI: Can flash glucose monitoring improve blood glucose control in Indigenous Australians with type 2 diabetes? A11 – LAUTENSCHLAGER: Physical Activity in Aged Mental Health Services: Physical activity guidelines implementation for aged mental health community team consumers A12 – MILGROM: Clinical Decision Support Integrated with e-Screening for Postnatal Depression A13 – MILNER: Clinical and community service provision for people with disabilities: Investigating the perspectives of the health care workforce and their clients A14 – REDDIHOUGH: Hips on Track: A state-wide approach to preventing hip dislocation for young people with cerebral palsy A15 – VELAKOULIS: Clinical utility of plasma neurofilament light chain in the diagnostic screening of psychiatric and neurological disorders: An "ESR" for the brain? A16 – ANDERSON: Reducing persisting symptoms following child concussion a	Not applicable	Not available	One-off/ad hoc	1/07/2019	30/06/2022	Not available	Not available	$ 4,431,900.00	Prior to 03/09/2024

MRF9100001	Rapid Applied Research Translation	2018 Rapid Applied Research Translation (Round 2.2)	University of Sydney	University	NSW	Sydney Health Partners – MRFF Rapid Applied Research Translation, Stage Two	The proposed activities include original transformative translational research, capacity building to address key gaps in innovation pathways, and research infrastructure development to leverage and extend existing resources, particularly health data. The proposal delivers scalable solutions to health service problems to benefit patients. We also include participation in national system-level activities in partnership with other AHRTCs. Sydney Health Partners leads the AHRA work on innovative consumer and community involvement in research (along with the Western Australian Health Translation Network), and the AHRA initiative in better use of data to improve health outcomes (along with Monash Partners and the Melbourne Academic Centre for Health). We also have representation on the following initiatives: Health System Improvement and Sustainability, Women's Health, Indigenous Researcher Capacity, Wound Care, and Aged Care. Collectively these activities address Australian Medical Research Advisory Board priorities for 2016-2018 and 2018-2020, and meet the Grant Opportunity Guidelines. Original projects have been chosen based on alignment with the priorities of the MRFF RART program and our health services, scientific validity, and the ability for successful outcomes to be translated rapidly into the health system. They are multidisciplinary and each project involves collaboration across multiple health settings. These range from acute health services to aged care facilities, primary care and the general community. Our grant activities have been structured into two broad categories: improving care and health outcomes (with a focus on chronic disease in the community, and several vulnerable groups); and capacity building and infrastructure development including local and national projects in unprecedented collaboration with all other AHRA member Centres. For the next round, our partners have elected to include projects on Type 2 diabetes in two understudied populations: young adults and pregnant women. Diabetes is the fastest growing chronic condition in Australia, affecting around 1.7 million people. Several transformative translational projects target diabetes care, aiming to improve the attendance of diabetic adolescents at specialist clinics, providing increased access to gold standard care, and working to reduce the risk of Type 2 diabetes among young women who have had gestational diabetes. We also include a number of projects	Professor Don Nutbeam	Not available	One-off/ad hoc	1/07/2019	30/06/2024	Not available	Not available	$ 4,118,000.00	Prior to 03/09/2024
MRF9100006	Rapid Applied Research Translation	2018 Rapid Applied Research Translation (Round 2.2)	University of Western Australia	University	WA	Western Australian Health Translation Network – MRFF Rapid Applied Research Translation, Stage Two	he projects in this application align with the Australian Medical Research and Innovation (AMRI) Strategy 2016-2021 and address the AMRI Priorities 2016-2018 and/or 2018-2020. Transformative Translational Research: Health Service Translational Research Projects. Twelve research projects will be funded across a range of clinical topics. The projects are initiated and endorsed by WA Health Service Providers (HSP) and required to have: broad collaboration across WAHTN partner organisations: matched partner funding: measurable impact: and scalability. The two stage selection process involved projects being reviewed by WAHTN HSPs and the top four from each HSP then being assessed by an independent review panel. This ensures the successful projects will deliver scalable solutions to health service problems and directly benefit patients, while also aligning with the requisite MRFF and AMRI Priorities. Targeted Translational Research Fellowships will be offered through an open call process to WAHTN partner organisations. Funding will be provided for three 12-18 month Fellowships in the targeted areas of Antimicrobial Resistance, Wound Care and Indigenous Health. These are key areas of interest to the WA health and medical research sector with obvious alignment to the MRFF and AMRI Priorities. These Fellowships are designed to integrate research, education and clinical care by building capacity in the clinical workforce and improving clinical pathways. The areas of Wound Care and Indigenous Health also have obvious integration and synergy with two of the current NSLIs. National System Level Initiatives: CCI and Wound Care are areas of particular research strength in WA and resonate with the WAHTN membership. WAHTN will take a leading role on these two projects, while also continuing to actively participate in the remaining NSLI, Networks and advocacy activities led by other AHRA Centres. CCI in Health Research. WAHTN will co-chair this initiative with SHP. A Project Plan has been agreed by AHRA members who will continue to work collaboratively to achieve it. The plan targets four key areas of work. WAHTN will coordinate the activity across the AHRA centres and take the lead on Project 1: Development of minimum standards of good practice. In addition, WAHTN will work with two of its key enabling platforms to create a number of relevant and accessible CCI online modules. Wound Care. WAHTN will co-lead this initiative with BDHP. The project aims to address	Not applicable	Not available	One-off/ad hoc	1/07/2019	30/06/2024	Not available	Not available	$ 4,138,000.00	Prior to 03/09/2024
MRF9100007	Rapid Applied Research Translation	2018 Rapid Applied Research Translation (Round 2.2)	The University of Newcastle	University	NSW	NSW Regional Health Partners – MRFF Rapid Applied Research Translation, Stage Two	The research projects proposed for 2019-2021 form a cohesive and focused program of work with three focus areas: end of life, health economics and building researcher capacity (see diagram A). 1 - Enhanced Palliative Care Community Team Model: Lack of healthcare support prevents many patients from dying at home, particularly in rural communities. The project will pilot an 'enhanced' palliative care multidisciplinary community team model able to rapidly respond to dying patients' increased care needs. The model will be piloted in two matched urban and two matched rural sectors providing an analysis of the economic benefits. 2 - Advanced Care Planning: Rural Australians have poorer access to End of Life Care (EOLC) than other Australians. Advanced Care Planning can improve the quality, continuity and efficiency of EOLC, however local data shows use by health professionals is low. The project uses strategies to improve the development, quality, access, use and compliance with plans and uses a mixed methods study design to assess effectiveness. 3 - Perioperative Shared Decision Making in the Older Adult Population: Some surgery is considered 'futile', leading to health burdens on patients and increased costs to the health system. This project will implement a multidisciplinary shared decision-making clinic for high risk adults considering surgery aiming to provide more appropriate care for surgical candidates nearing the end of their life. 4 - Palliative Care Research Capacity Building Central Coast: This project provides accelerated research skills training for palliative care clinicians via the development of strategic research projects to support the agreed local vision for end of life care. It reflects current evidence by placing emphasis on strategic organisational alignment and mentoring relationships. 5 - Practice Based Primary Care Research Network: A practice-based research network (PBRN) will be established. The PBRN will address the research capacity gap in primary care. Seed funding for member-selected research projects will be provided and a wound care clinical trial will be undertaken. 6 - Embedded Economist: A health economist will be employed to work with our five health partners. They will spend several months with each providing dedicated support. The economist will work with each partner to improve evidence-based decision making. The program will be supported by a new practical unit of study on evaluation for managers. 7 - Economic Evaluation of Existing Research:	Not applicable	Not available	One-off/ad hoc	1/07/2019	31/12/2023	Not available	Not available	$ 4,110,000.00	Prior to 03/09/2024
MRF9100005	Rapid Applied Research Translation	2018 Rapid Applied Research Translation (Round 2.2)	South Australian Health and Medical Research Institute Limited	Medical Research Institute	SA	Health Translation SA – MRFF Rapid Applied Research Translation, Stage Two	Health Translation SA has identified transformative translational research projects that align with MRFF priorities and focus on key South Australian and national health areas including Aboriginal Health, Ageing, Data Access and Analytics, Health Services Interface and Mental Health. These projects represent key health challenges and priorities identified as strengths and needs in South Australia. The activities demonstrate mobilizing 'across partner' projects that lead to solutions to current health services challenges and where health services, academics and community sectors pragmatically and effectively co-design and deliver solutions that address some of the real issues facing the health system and patients in South Australia. HTSA is collaboratively driving the implementation of these targeted research and translation projects, which in a short period of time will achieve significant outcomes. Aboriginal Health Project - Strengthening Aboriginal Capacity in Health Research Translation and Development in South Australia (SIACTD) (Lead: Professor Alex Brown) Ageing Project - STAAR-SA. State Action on Avoidable Rehospitalisations and Unplanned Admissions: An Integrated Knowledge Translation project across SA (Lead: Professor Maria Crotty) Data Access and Data Analytics Project – Health Informatics Hub including an exemplar Health Services Interface Data Project (Lead: Health Translation SA) Mental Health Project - Needs based community mental health services: Implementing timely and needs based interventions in the community by applying algorithms to transactional health care data (Lead: A/Professor Niranjan Bidargaddi) Nationally HTSA will work collaboratively with other Centres in the Australian Health Research Alliance (AHRA) in five agreed national priority areas. The provision of support from the MRFF for these National System Level Initiatives (NSLI), as listed below, will advance health services and research and the rapid translation of knowledge into improved health care across the country. NSLI 1: Health Systems Improvement and Sustainability Framework and health technology assessment platform - Health Systems Embedded Economist NSLI 2: Building capacity in data driven health care improvement NSLI 3: An Indigenous Research Network and Capacity Building NSLI 4: Consumer and Community Involvement NSLI 5: Wound Care. HTSA leads the national Indigenous Research Network and Capacity Building Initiative (NSLI 3) and will specifically invest in this Initiative.	Professor Maria Makrides	Not available	One-off/ad hoc	1/07/2019	30/06/2024	Not available	Not available	$ 4,110,000.00	Prior to 03/09/2024
MRF9100002	Rapid Applied Research Translation	2018 Rapid Applied Research Translation (Round 2.2)	University of New South Wales	University	NSW	Maridulu Budyari Gumal Sydney Partnership for Health Education Research and Enterprise (SPHERE)– MRFF Rapid Applied Research Translation, Stage Two	This application outlines an innovative program of research and translation activities addressing the MRFF Priorities, the Australian Medical Research and Innovation Priorities 2016-2020, areas of improving models and pathways of care, reducing unwarranted clinical variation, addressing healthcare needs of vulnerable groups, improving primary care research and implementing public health interventions in our population. In 2017, Maridulu implemented a rigorous annual internal productivity review process to maintain focus on priority areas and to drive project performance to milestones, outcomes and impacts. The focus of this RART grant program is on the conduct of translational research and research translation in MRFF priority areas and the establishment of strategic programs that enable and support the translation of research outcomes into clinical practice and health policy. Maridulu is a purpose build translational research and research translation vehicle comprising 16 Clinical Academic Groups (CAGs), each supported by cross-cutting enabling platforms that focus on clinical academic workforce capacity building, clinical trials, health informatics, implementation science and knowledge translation and integrated value-based healthcare. The CAGs: span the major burdens of disease in our region; are cross-disciplinary and cross-institutional; are embedded within our four healthcare partners; conduct local healthcare provider and national MRFF priority-driven translational research projects across the partnership. 12 CAGs have been fully operational for 21 months and their initial 18 months of project activity has undergone external peer review in July 2018. Four new CAGs have been accredited and have progressed planning with project activities about to commence. Individual CAG projects and relevant platform activities are described in detail below. The four new CAGs, and the 12 foundation CAGs are scheduled to be performance appraised against MRFF and internal priority key performance indicators in November 2019. The strategic platforms i.e. Implementation Science, Knowledge Translation, Clinical Trials Support and Enablement, and Clinical Workforce Development platforms have been established by Maridulu and are designed to support CAGs to deliver transformational projects that will have impact on local healthcare practice and policy. Maridulu works collaboratively with AHRA Translational Centres to support the delivery of project activities for each NSLI indicated in Activity	Not applicable	Christopher White	One-off/ad hoc	1/07/2019	30/08/2023	Not available	Not available	$ 4,110,000.00	Prior to 03/09/2024
MRF9100009	Rapid Applied Research Translation	2018 Rapid Applied Research Translation (Round 2.1)	Monash University	University	VIC	Monash Partners Advanced Health Translation Centre - MRFF Rapid Applied Research Translation, Stage 2.1	Aligned with the Australian Medical Research and Innovation Strategy 2016-2021 and Australian Medical Research and Innovation priorities 2016-2018, these grant activities aim to increase health system innovation and responsiveness to emerging challenges across new technology, communicable diseases, and an ageing population. We propose i) unprecedented collaboration across all stakeholders, ii) high impact strategic prioritised transformative translational projects and iii) nationwide system level activities. Research is recognised as the optimal strategy to prepare for emerging challenges and drive health system safety and quality, ensure intervention effectiveness and prevent and treat conditions. Our proposal addresses MRFF priority areas across i) clinical pathways and care, collaborating across the continuum of care, ii) clinical variation underpinned by data driven health care improvement and iii) improving the health of vulnerable groups. To do this we offer collaborative governance models within our AHRTC and across the Australian Health Research Alliance. Our Transformative Translational Research projects will: advance treatment of life threatening infections in cancer patients; translate a model for elimination of Hepatitis C into practice; improve quality and safety outcomes following cardiothoracic surgery; implement a patient centred model of care across the care continuum for patients with dementia and delirium; enhance communication and primary health care for residents of aged care facilities with limited English proficiency; bring primary health and social services to vulnerable communities; and enhance home based care for jaundiced infants. We will also build capacity for data driven health care improvement through health data research incubator hubs and develop data harmonisation and clinical research facilitation road maps to support clinical research. In the National System Level Initiatives, we will work with AHRA to improve health outcomes, cutting across systems level challenges nationally through integration of research, education and health care by building capacity in agreed priority areas. Monash Partners will lead in building capacity in data driven health care improvement, and engage in strengthening consumer and community involvement in health research, in building capacity for Health Systems Improvement and Sustainability, and in Indigenous led research and Wound Care.	Not applicable	Not available	One-off/ad hoc	11/01/2019	30/06/2021	Not available	Not available	$ 1,978,561.00	Prior to 03/09/2024

MRF9100010	Rapid Applied Research Translation	2018 Rapid Applied Research Translation (Round 2.1)	The University of Queensland	University	QLD	Brisbane Diamantina Health Partners – MRFF Rapid Applied Research Translation, Stage 2.1	The BDHP Translational Research Program 2018-2019 will fund nine translational research projects that will deliver health system improvements, better patient outcomes and cost efficiencies for the health system. All projects align with MRFF Priorities and with those of BDHP health service partners and Queensland Health. The projects focus on the integration of health, education and clinical care and build workforce capacity and will lead to more efficient health services, better models of care and improved clinical practice. Projects address knowledge gaps in health, addressing cardiac and cancer-related burdens of disease, health issues impacting vulnerable groups including older and indigenous people, as well as obesity, diabetes, sepsis, and melanoma. The proposed projects, selected through a rigorous assessment process, led by clinician-researchers are across the hospital-community care continuum and the translational research spectrum. They all demonstrate appropriate research methodology and design, have objectives and outputs that can be delivered within the RART timeframe and show high levels of consumer and community involvement. In consultation and collaboration with the other eight Translation Centres, BDHP will also continue to actively participate in key National System Level Initiatives (NSLI). The four initiatives: Health Systems Improvement and Sustainability Framework, Data Drive Healthcare Improvement, Indigenous Research Network and Capacity Building, and Community Involvement in Health Research, will be progressed into 2019. BDHP will continue to co-lead the Health Systems Improvement and Sustainability initiative with NSW Regional Health Partners and SPHERE. In addition, BDHP will participate in several new areas identified by the Australian Health Research Alliance (AHRA), including Wound Care, Aged Care and Women's Health. BDHP will co-lead with Western Australian Health Translation Network (WAHTN) the Wound Care initiative and BDHP is coordinating the Aged Care Translation Research and Impact Network.	Not applicable	Not available	One-off/ad hoc	30/01/2019	30/06/2023	Not available	Not available	$ 2,000,000.00	Prior to 03/09/2024
MRF9100011	Rapid Applied Research Translation	2018 Rapid Applied Research Translation (Round 2.1)	University of Melbourne	University	VIC	Melbourne Academic Centre for Health – MRFF Rapid Applied Research Translation, Stage 2.1	Transformative Translational Research (TTR): Through a targeted call for grants aligned to MACH and MRFF priorities, rigorous peer review (scientific quality, team, alignment, feasibility, breadth and scale of partnership, inclusion of primary care), and assessment of likely impact by MACH health decision makers (CEOs), the MACH has selected seven multi-site projects. A1 – BIVARD: Tenecteplase versus Alteplase for Stroke Thrombolysis Evaluation Trial in the Ambulance (TASTEa) An ECR-led clinical trial to identify if early administration of oral thrombolytic agent, tenecteplase prior to hospital can improve outcomes from stroke, and reduce costs compared to standard care of IV alteplase in hospital. A2 – BURCHILL: Closing the gap on Indigenous cardiovascular (CV) health: Improving community outcomes through high impact policy relevant research. An ECR-Indigenous clinician researcher-led primary care health data project to determine barriers to implementation of evidence-basedcardiovascular (CV) to Indigenous Australians compared to rest of the community. A3 – DEANE: Liberal glUcose Control in Critically Ill patient with pre-existing type 2 Diabetes (LUCID): a phase IIB multi-centre parallel group randomised clinical trial. An ECR led multicentre randomised clinical trial to improve management of hyperglycaemia in type II diabetes patients in critical care, so that interventions occur only a higher blood glucose level. This trial aims to reduce hypoglycaemia and other complications of diabetes and ICU stay in this population. A4 – DUQUE: Integrating Osteoporosis in Primary Care: The Osteoporosis Risk and Management (ORMA) Project. This health services research study and fellowship seeks to evaluate effectiveness of scale up of a new, tested and osteoporosis e-technology platform in primary care to improve detection, management, and knowledge about osteoporosis by GPs. A5 – HISCOCK: Improving the care of children with frequent asthma admissions through partnerships with hospitals, GPs, and families. This health services/data research study and fellowship aims to reduce unnecessary, costly asthma re-admissions to paediatric and mixed adult/child emergency departments in children by analysis of health data to identify modifiable health system, primary care, and family factors associated with asthma re-admissions. A6 – NELSON: Future Health Today Project-Co-design of Prototype. This consumer co-designed study and fellowship will test the capacity of an e-technology platform to extract	Not applicable	Not available	One-off/ad hoc	27/03/2019	30/06/2021	Not available	Not available	$ 1,678,100.00	Prior to 03/09/2024
MRF9100012	Rapid Applied Research Translation	2018 Rapid Applied Research Translation (Round 2.1)	University of Sydney	University	NSW	Sydney Health Partners – MRFF Rapid Applied Research Translation, Stage 2.1	The Sydney Health Partners Rapid Translation Research Program 2018-19 will fund a program of short-term translational research projects that address MRFF priorities aligned with the priorities of our health service partners. The projects will improve clinical pathways, build capacity in the clinical workforce, and test a number of care options that seek to shift care away from hospitals and into the home, providing significant benefits to patients as well as cost-savings to the health system. Several projects aim to address known health inequalities among marginalised members of our communities, for example, people with rare diseases, people with severe mental illness, people with Hep C, and Indigenous children. The individual projects are embedded in our Local Health Districts (LHDs), led by clinicians serving more than 2.7 million people and supported by the world leading research capabilities of the University of Sydney and nine independent research institutes. Projects across the spectrum from acute care to chronic disease management and community-based interventions amongst disadvantaged and/or marginalised groups. They will develop, implement and improve clinical pathways, leverage existing data to inform and improve clinical practice and outcomes, and drive more patient-centred care. A smaller but important part of the program will support proof of concept projects that test the potential of genomics to guide diagnosis and treatment decisions for patients with chronic disease, families with rare diseases and those at increased risk of colon cancer. The proposed RART projects are diverse in subject, target population and stage of the research continuum, however they have in common that they: Map closely to AMRAB/MRFF priorities; Involve scale through multidisciplinary and multi-institutional involvement to take advantake of the large population catchment served by SHP partners; Have a clear research question and strong design and evaluation including meaningful 12-month objectives and deliverables; Have an explicit implementation pathway; Have been selected following a rigorous assessment process. Following an open call, funding applications were ranked and triaged by our health service partners for alignment with local health priorities, then reviewed by an expert panel on the following criteria: alignment with MRFF priorities; feasibility; potential impact on the broader health system and the health of the community; value for money; ability to deliver	Not applicable	Not available	One-off/ad hoc	30/01/2019	30/06/2021	Not available	Not available	$ 1,992,000.00	Prior to 03/09/2024
MRF9100013	Rapid Applied Research Translation	2018 Rapid Applied Research Translation (Round 2.1)	University of Western Australia	University	WA	Western Australian Health Translation Network – MRFF Rapid Applied Research Translation, Stage 2.1	The WAHTN translational research projects outlined in this application align with the Australian Medical Research and Innovation Strategy 2016-2021 and Australian Medical Research and Innovation priorities 2016-2018, and focus on the integration of research, education and clinical care by building capacity across these three key areas. WAHTN will undertake a number of rapid translational research projects during the 2019 calendar year that build capacity in the clinical workforce and improve clinical pathways. The four key projects will focus on: Early career development; by offering Early Career Research Fellowships open to all health professionals with an emphasis on collaboration, leveraged funding and measurement of impact on improved patient outcomes (Project 1). Increasing research education and training capacity; by undertaking a review of current contextualised research training across the AHRA Centres, and their partners, to map relevant research on-line education needs (Project 2). Enhancing researcher access to cohort data; through development of a software platform to support governance, discovery and translation from large health datasets (Project 3). Addressing the important clinical area of men's health; thorough analyses into the associations of endogenous sex hormones with key health outcomes using pooled data from nine cohort studies samples from ~20,000 men across Australia, Europe and USA (Project 4). For a detailed description of each project see Section 3, Criterion 1 of this application and the activity work plan in Table A.In addition to the rapid translational research projects, WAHTN will continue to actively participate in key National System Level Initiatives (NSLI), in consultation and collaboration with the other AHRA Centres. These projects will build upon the four initiatives commenced in 2018 namely: Health System Improvement and Sustainability Framework; Data Driven Health Care; Indigenous Research Capacity Building; and Consumer and Community Involvement in Health Research. WAHTN will also participate in several new initiatives identified by AHRA; these include Wound Care, Aged Care and Women's Health. WAHTN will co-lead with Brisbane Diamantina Health Partners the newly developed Wound Care initiative and will continue to co-lead the Consumer and Community Involvement in Health Research initiative with Sydney Health Partners. These two initiatives are areas of particular research strength in WA and resonate with the WAHTN	Not applicable	Not available	One-off/ad hoc	30/01/2019	28/02/2021	Not available	Not available	$ 1,972,000.00	Prior to 03/09/2024
MRF9100014	Rapid Applied Research Translation	2018 Rapid Applied Research Translation (Round 2.1)	Central Australian Aboriginal Congress Aboriginal Corporation	Corporation	NT	Researcherenye Wappayalawangka Central Australia Academic Health Science Network – MRFF Rapid Applied Research Translation, Stage 2.1	Summary: 1 Significant improvement in quality of care in Aboriginal primary health care through developing tools to develop/enhance non-clinical KPIs. 2 Aboriginal Primary Health services will be the focus of consolidating/evaluating the delivery of Trauma Informed Care at all levels within their organisations. 3 A cohort of 800 Indigenous residents has been recruited to Baker's HTLV-1 community survey. It will partner with those already engaged to a Longitudinal Study, expanding to WA's Ngaanyatjarra region. 4 Research has often been imposed on Aboriginal people with little meaningful exchange of knowledge/understanding. To assist Aboriginal communities, services and board members in improving understanding/benefits/outcomes of research, to become partners in driving research. 5 Reports of youth crime and risky behaviour in Alice Springs have increased. There is an absence of young people's voices and input into understanding the issues and identifying solutions for young people most at risk. 6 Effective communications between health staff and patients across the Central Australia Health Service is a critical element in improving health outcomes. It is designed to provide sustained improvement in intercultural communication into policy/practice. 7 Aboriginal people experience of very high levels of psychological distress is unacceptably elevated compared with non-Indigenous. The project involves establishing a prototype SEWB assessment instrument that is culturally relevant and safe. 8 The need for an effective primary health care system is urgent in remote Aboriginal communities in order to "close the health gap". This aims to measure the impact of short-term health staff in the remote Ngaanyatjarra Health Service; co-design and implement a comprehensive, affordable, culturally safe and evidence-based workforce strategy. 9 The burden of disease and mortality rate increases with increasing remoteness—there is a need for effective primary health care services, but also for effective emergency services which give remote residents access to life-saving care. A dedicated Medical Retrieval and Consultation Centre was launched in 2018. This study will evaluate the timeliness, efficiency and impact of Centre. 10 Disparities between Aboriginal and non-Aboriginal Australians with diabetes are most striking in young people. Obesity is a key risk for type 2 diabetes—addressing this is vital in reducing risk of youth-onset type 2 diabetes. Designed to intervene within this life stage to	Not applicable	Not available	One-off/ad hoc	30/01/2019	30/06/2022	Not available	Not available	$ 2,000,000.00	Prior to 03/09/2024
MRF9100015	Rapid Applied Research Translation	2018 Rapid Applied Research Translation (Round 2.1)	The University of Newcastle	University	NSW	NSW Regional Health Partners – MRFF Rapid Applied Research Translation, Stage 2.1	Transformative Translational Research: The research projects NSWRHP proposed for 2019 form a program of work. It's comprised of three priority areas with one overarching project area, economic evaluation (see diagram A for further information). An economic evaluation will be built into each of the six projects, implementing and testing the HSIS framework recommendations developed in 2018. Physical activity policy: All states have policies requiring the weekly provision of planned physical activity (PA) for school students. Despite this <20% of schools implement such policies. This project will see the roll out of a co-developed model of implementation support. The model aims to overcome schools' barriers to the implementation of the mandatory NSW PA policy. 100 primary schools across three LHDs will be recruited and receive an implementation support package based on the model. Child obesity reduction: This project aims to increase the use of evidence-based government services by delivering health information and referral direct to parents. Primary schools (36) will be recruited to participate in an electronic messaging program. Electronic messages, based on the health belief model, will be delivered to parents via an app. Messages will inform parents of existing free government services, targeting motivation to participate in programs and provide links to enrolment pages. Thirsty? Choose water!: Approximately 24 regional schools will receive either one of three interventions or be assigned to the control arm. The project aims to determine if a behavioural intervention and chilled water stations, alone or combined, increase water consumption and effect changes in students' knowledge, attitudes or consumption of soft drinks, cordial and sports drinks. Cultural safety: A guideline will be developed based on assessment of four key strengths of Australian Aboriginal cultural practices in family life to assist healthcare professionals in communicating and working with Aboriginal families and children towards positive outcomes for their communities. Child immunisation: In this project a Tailored Immunisation Programme will be developed and concurrently implemented in four communities. Pockets of low childhood immunisation coverage will be identified, underlying reasons explored and mitigating health service delivery strategies identified. These are likely to include primary care or community health-related immunisation settings where new collaborations or improvements to	Not applicable	Not available	One-off/ad hoc	29/03/2019	30/06/2021	Not available	Not available	$ 2,000,000.00	Prior to 03/09/2024

MRF9100017	Rapid Applied Research Translation	2018 Rapid Applied Research Translation (Round 2.1)	University of New South Wales	University	NSW	Maridulu Budyari Gumal Sydney Partnership for Health Education Research and Enterprise (SPHERE) – MRFF Rapid Applied Research Translation, Stage 2.1	This application outlines an innovative program of research and translation activities addressing the MRFF Priorities, the Australian Medical Research and Innovation Priorities 2016-2018, areas of improving models and pathways of care, reducing unwarranted clinical variation and addressing healthcare needs of vulnerable groups in our population. In 2017, SPHERE implemented a rigorous annual internal productivity review process to drive project performance to milestones and outcomes. The underlying focus of this grant program is on both the conduct of translational research in these priority areas and also the conduct of projects and the establishment of strategic programs that enable support aiming to drive translation of research outcomes into clinical practice and health policy. SPHERE is a purpose build translational research and research translation vehicle comprising 12 clinical academic groups (CAGs) supported by enabling strategic programs focusing on clinical academic workforce capacity building, clinical trials, data driven healthcare, implementation science and knowledge translation and integrated value-based healthcare. The CAGs: span the major burdens of disease in our region; are cross-disciplinary and cross-institutional; are embedded within our four healthcare partners; conduct local healthcare provider and national MRFF priority-driven research projects across the partnership. All CAGs have been fully operational for 15 months and an initial 12 months of project activity and productivity has undergone external peer review in July 2018. The performance appraisal is based around domains of leadership, research quality, translation to impact, education and training activities and collaboration. On-going annual funding support for the CAGs is dependent on satisfactory productivity against the matrix of indicators outlined in Criterion 1 Appendix 1. Enabling programs have been established by SPHERE and been designed to support CAGs to deliver transformational projects that will have impact on local healthcare practice and policy. These programs will be evaluated in accordance with the measures developed during Stage 2 of the SPHERE Draft Strategic Outcome Measures as referenced in Criterion 1 Figure 3.	Not applicable	Christopher White	One-off/ad hoc	26/02/2019	31/03/2023	Not available	Not available	$ 2,000,000.00	Prior to 03/09/2024
4500126404	Rapid Applied Research Translation	2017 Rapid Applied Research Translation (Round 1)	Monash University	University	VIC	Monash Partners Rapid Translation Projects - Component A	1. Expanded analysis of the Victorian Cardiac Outcome Registry (VCOR) 2015-2017 to address barriers and improve patient outcomes in the era of field-triage. 2. Using data linkage to reduce avoidable hospitalisation in vulnerable groups including the elderly. 3. Implementation of an Enhanced Recovery After Surgery (ERAS) Program for Hip and Knee Replacement Surgery. 4. Ensuring HIV positive people are retained in care for best health outcomes. 5. Towards integrated care: improving patient and frontline staff engagement and experience of ambulatory care across the care continuum. 6. Improving access to primary care for vulnerable patients. 7. Improving access to new treatments for patients with Myeloma through a new clinical trials platform. 8. Reducing the evidence practice gap in preventing rehospitalisation and recurrences following stroke. 9. Identifying the determinants of narcotics and radiological imaging overuse for low back pain in community-based women. 10. A large scale approach to improving lung cancer care and health outcomes: assessment of best practice using a clinical quality registry. 11. A new model of health-care for co-morbid diabetes and chronic kidney disease. 12. Victorian Obstetric Anal Sphincter Injury (OASIS). National System Level Initiatives: 13. Health Systems Improvement and Sustainability Framework and Health Technology Assessment. 4. Building capacity in data driven healthcare improvement. 15. An Indigenous Research Network and capacity building.	Not applicable	Not available	Targeted non-competitive	2/01/2018	31/12/2018	Not available	Not available	$ 2,222,222.00	Prior to 03/09/2024
4500126409	Rapid Applied Research Translation	2017 Rapid Applied Research Translation (Round 1)	The University of Queensland	University	QLD	Collaborative research into national system level initiative/s - Component B	Aligned with the Australian Medical Research and Innovation Strategy 2016-2021 and Australian Medical Research and Innovation priorities 2016-2018, the aim is to increase health system innovation and responsiveness to emerging challenges across new technology, communicable diseases, and an ageing population. BDHP will collaborate across the Australian Health Research Alliance (AHRA) to improve health outcomes, cutting across systems level challenges nationally through integration of research, education and health care and building capacity in agreed priority initiatives. Research is recognised as the optimal strategy to prepare for emerging challenges and drive health system safety and quality, ensure intervention effectiveness and prevent and treat conditions. This proposal addresses the MRFF priorities: i) clinical pathways and care, collaborating across the continuum of care, ii) clinical variation underpinned by data driven health care improvement and iii) improving the health of vulnerable groups. To do this the Centres provide collaborative governance models within each Centre and across the AHRA. BDHP will lead capacity building in initiative one through its expertise in implementation and knowledge translation with a special focus on the hospital - primary care interface. BDHP will engage in building capacity in data driven health care improvement through expertise and experience in electronic medical records to enhance the quality and efficiency of care. Building on existing efforts and integrated digital hospital platform, it will refine and expand its pioneering techniques in linking patient process measures to patient outcomes and translating them into continuum of care workflows. BDHP will engage in building capacity in community involvement in research and indigenous led research. MRFF support for these priorities will enable excellent researchers to drive innovative treatments through rapid translation to health impact, contributing to a sustainable health system, cutting across the health system. It aligns with BDHP's Strategic Plan 2015-2020 and State Government vision for research and translation of knowledge into practice and care.	Not applicable	Not available	Targeted non-competitive	2/01/2018	31/12/2018	Not available	Not available	$ 222,222.00	Prior to 03/09/2024
4500127111	Rapid Applied Research Translation	2017 Rapid Applied Research Translation (Round 1)	University of Melbourne	University	VIC	Melbourne Academic Centre for Health Rapid Translation Projects - Component A	A. Precision medicine for EE: An integrated translational program with three components: 1. Gene discovery: to identify and characterise novel EE genes in cohort >700 patients through whole genome and whole exome sequencing 2. Functional studies: in vitro, in vivo and stem cell models to understand the impact of genetic mutations on protein function and identify novel pathways 3. Novel drug discovery platforms: pre-clinical studies of the impact of repurposed drugs and novel compounds on models of EE. B: EMPOWER-GR: The project will address the challenge of physical deconditioning in patients with acute disease and highest risk of physical limitations, by counteracting sarcopenia through: 1. Diagnostics 2. Intervention - RCTs for nutritional and exercise interventions 3. Understanding of basic biological mechanisms 4. Implementation in geriatric rehabilitation settings 5. Dissemination - encouraging screening, diagnostics and intervention in collaboration with national and international stakeholders. C: Retinal photography & AI: This project will assess the impact of the new AI-based GP retinal screening model in identifying three types of eye disease (glaucoma, diabetic retinopathy and age related macular degeneration). Investigators have developed a web-based system that incorporates an artificial intelligence (AI)-based automatic grading algorithm on retinal imaging with proven efficiency and accuracy. The project will assess the impact, feasibility, and cost-effectiveness of this model in a randomised trial. D. Thunderstorm Asthma: This project proposes to establish potential and identify novel risk factors for severe asthma during this epidemic to inform future clinical interventions. Hospital and population-based case-control studies will confirm and quantify risk factors. It will also investigate treatment strategies by undertaking a clinical trial of sublingual grass-pollen desensitisation tablets in patients with allergic asthma. A prediction model will be developed to identify patients at risk, which will inform platforms for Health Services Research, clinical and public health translation.	Not applicable	Not available	Targeted non-competitive	20/03/2018	30/06/2018	Not available	Not available	$ 2,222,222.00	Prior to 03/09/2024
4500126498	Rapid Applied Research Translation	2017 Rapid Applied Research Translation (Round 1)	University of Sydney	University	NSW	Sydney Health Partners Rapid Translation Projects - Component A	The Sydney Health Partners Rapid Applied Research Translation Program will scale up innovation in health care and accelerate the delivery of improved health outcomes by addressing the leading causes of death and disability in our populations. The individual projects are embedded in our Local Health Districts (LHDs), led by clinicians serving more than 2.7 million people, and supported by the world leading research capabilities of the University of Sydney and nine independent research institutes. Projects in cancer, cardiovascular disease and musculoskeletal disorders will cross the spectrum from acute emergency care to chronic disease management amongst disadvantaged groups in the community developing, improving and implementing clinical pathways, harmonising data to address variations in clinical practice and outcomes, all with the objective of enhancing care that is both patient centred and value based. A smaller but important part of the program will address how the vast potential of genomics can be utilised in mainstream health using genetic eye disease and breast cancer biomarkers as examples. The projects are responsive to locally identified needs, but the outcomes will have application well beyond our own community. For example, hepatitis C (and associated liver cancer) is a national challenge that requires localised responses. Australia fails to meet international targets largely because established hospital-based programs do not reach high prevalence groups. We are proposing an innovative community-based model of care that can deliver higher rates of vaccination and provide opportunities for addressing many other health issues affecting vulnerable populations. Following a rigorous evaluation process, we selected projects on the basis of their alignment with the objectives of the Rapid Applied Research Translation Program, their feasibility and potential impact on the broader health system and the health of the community, and on their ability to deliver meaningful outcomes in a finite time.	Not applicable	Not available	Targeted non-competitive	12/01/2018	31/12/2018	Not available	Not available	$ 2,222,222.00	Prior to 03/09/2024
4500126408	Rapid Applied Research Translation	2017 Rapid Applied Research Translation (Round 1)	University of Western Australia	University	WA	Collaborative research into national system level initiative/s - Component B	Aligned with the Australian Medical Research and Innovation Strategy 2016-2021 and Australian Medical Research and Innovation priorities 2016-2018, this "project" aims to increase health system innovation and responsiveness to emerging challenges across new technology, communicable diseases, and an ageing population. We propose i) unprecedented collaboration across all stakeholders and ii) nationwide system level activities (component B). Research is recognised as the optimal strategy to prepare for emerging challenges and drive health system safety and quality, ensure intervention effectiveness and prevent and treat conditions. Our proposal addresses MRFF priority areas both health research and its translation by i) clinical pathways and care, collaborating across the continuum of care, ii) clinical variation underpinned by data driven health care improvement and iii) improving the health of vulnerable groups. To do this we offer collaborative governance models within our AHRTC and across the Australian Health Research Alliance. In component B we will work with the AHRA to improve health outcomes, cutting across systems level challenges nationally through integration of research, education and health care by building capacity in agreed priority areas. WAHTN will co-lead with Sydney Health Partners the consumer and community involvement initiative, focussing on building capacity for data driven health care improvement, and engage in building capacity in community involvement in research and health care innovation, in health services research and in indigenous led research. WAHTN will also engage in other AHRA initiatives described by other Alliance members. MRFF support for these strategic priorities will enable excellent researchers, and drive innovative treatments through rapid translation to health impact, contributing to a sustainable health system, cutting across the health system. WAHTN represents a "Whole of State" approach to advancing health care and to embedding research as a core activity of the health care system.	Not applicable	Not available	Targeted non-competitive	2/01/2018	31/12/2018	Not available	Not available	$ 222,222.00	Prior to 03/09/2024
4500127112	Rapid Applied Research Translation	2017 Rapid Applied Research Translation (Round 1)	Central Australian Aboriginal Congress Aboriginal Corporation	Corporation	NT	Collaborative research into national system level initiative/s - Component B	The proposed project will build further capacity for, and support the application of, Aboriginal community engagement in translational health research. While most of the project activities will be carried out in Central Australia, the learnings from the project will be shared with NHMRC accredited Centres to inform appropriate Aboriginal community engagement in other parts of the country. The three main components of the project are: (1) Seed funding for innovative and high priority research ($100,000). Two research projects have been selected to receive a small contribution towards project development and implementation: the 'HTLV-1 mother to child transmission study,' and 'Assessing the effectiveness of the Aboriginal community controlled health services sector study'. These research studies are aligned with the platform areas of the CA AHSC and the MRFF objectives. (2) Aboriginal research engagement officer(s) ($72,222). The CA AHSC Partner have considerable expertise in Aboriginal community engagement within the region. The part-time employment of one or more Aboriginal research engagement officers will ensure development of effective and streamlined channels for Partners and other community organisations to engage in the five platform areas of the CA AHSC. (3) Support towards administration of the CA AHSC ($50,000). There is need to accelerate the administration of the CA AHSC as a Centre for Innovation in Regional Health. The newly developed Chief Operating Officer role will allow for better coordination of planning, priority setting, and development of policies and procedures by the CA AHSC. This includes greater capacity to: coordinate annual priority setting processes with community partners; develop organisational policies (including as related to community engagement); and participate in national dialogue and initiatives with the Australian Health Research Alliance (AHRA). The above project elements will be integrated into the national initiatives identified by the AHRA: Consumer and Community Involvement; and the Indigenous Research Network.	Not applicable	Not available	Targeted non-competitive	20/03/2018	31/12/2018	Not available	Not available	$ 222,222.00	Prior to 03/09/2024

4500126401	Rapid Applied Research Translation	2017 Rapid Applied Research Translation (Round 1)	The University of Newcastle	University	NSW	Collaborative research into national system level initiative/s - Component B	The development of a national framework for assessment of new health technologies and models of care is aligned with the Australian Medical Research and Innovation Strategy 2016-2021 and Australian Medical Research and Innovation Priorities 2016-2018. The focus of this national initiative aims to increase health system innovation and responsiveness to emerging challenges across new technology and changing models of health care and provide evidence for value-based health care decision making. We propose unprecedented collaboration across all NSWRHP stakeholders and AHRA nationwide system level activities to develop a national framework in health economics assessment that considers clinical, economic and social indicators. Our initiative addresses MRFF priority areas across both health research and its translation - i) clinical pathways and care, collaborating across the continuum of care, ii) clinical variation underpinned by data driven health care improvement and iii) improving the health of vulnerable groups. To do this we will work within the collaborative governance models of our CIRH and across the Australian Health Research Alliance centres. We will work with the AHRA by developing of a national health systems improvement and sustainability framework and building capacity in agreed priority areas. NSW Regional Health Partners will co-lead this work with the Sydney Partnership for Health Education Research and Enterprise (SPHERE) and Brisbane Diamantina Health Partners. NSWRHP will also engage in other AHRA initiatives, specifically in i) building capacity in Indigenous led research, ii) contributing to the steering committees for building capacity in data driven care improvement and iii) developing the implementation sciences required to change behaviours within our communities and health services. NSWRHP will support these strategic national priorities to enable clinicians and researchers to drive innovative treatments through rapid translation to health impact, contributing to a sustainable innovative health system. These initiatives will be underpinned by community and consumer engagement.	Not applicable	Not available	Targeted non-competitive	2/01/2018	31/12/2018	Not available	Not available	$ 222,222.00	Prior to 03/09/2024
4500126406	Rapid Applied Research Translation	2017 Rapid Applied Research Translation (Round 1)	South Australian Health and Medical Research Institute Limited	Medical Research Institute	SA	South Australian Health and Medical Research Institute Rapid Translation Projects - Component A	The SA Academic Health Science and Translation Centre (SA Centre) Rapid Translation Projects outlined in this application address each of the SA Centre priority areas, focussing not only on health issues of greatest clinical concern such as Aboriginal Health, colorectal cancer and cardiac rehabilitation, but also on the issues associated with the successful implementation of a State-wide translational health 'pipeline' to help bridge the gaps that lie between the different stages of translating new, evidence-based discoveries into standard healthcare practice. The SA Centre has identified nine translational research projects that are aligned with the MRFF Priority areas. These projects cover key health areas – cardiac rehabilitation (Project 4), pre-term birth (Project 7), diabetes (Project 2), colorectal cancer (Project 3) and stroke (Project 9) – as well as focussing on data and registry science in the areas of mental health (Project 8), ageing (Project 5) and joint replacement (Project 6). In addition, the SA Centre will have a specific focus on chronic disease in Aboriginal communities (Project 1). These projects focus on the integration of research, education and clinical care by building capacity across the three sectors. Through its whole-of-State approach, and the co-location with the South Australian Health and Biomedical Precinct, the SA Centre is collaboratively driving the implementation of these targeted research and translation projects in its priority areas, which in a short period of time will achieve significant outcomes. At a national level, the SA Centre will work with the Australian Health Research Alliance to build capacity in agreed national priority areas: data driven health care improvement, health services research and Indigenous led research. The provision of support from the MRFF for this translational program of research will enhance the conduct of excellent health and medical research leading to rapid translation for improved health care delivery.	Not applicable	Not available	Targeted non-competitive	22/12/2017	31/12/2018	Not available	Not available	$ 2,222,222.00	Prior to 03/09/2024
4500126405	Rapid Applied Research Translation	2017 Rapid Applied Research Translation (Round 1)	University of New South Wales	University	NSW	Collaborative research into national system level initiative/s - Component B	Aligned with the Australian Medical Research and Innovation Strategy 2016-2021 and Australian Medical Research and Innovation priorities 2016-2018, this "project" aims to increase health system innovation and responsiveness to emerging challenges across new technology, communicable and non-communicable diseases, and an ageing population. We propose i) unprecedented collaboration across all stakeholders and ii) nationwide system level activities (component B). Research is recognised as the optimal strategy to prepare for emerging challenges and drive health system safety and quality ensuring intervention effectiveness. Research translation is then required to prevent and treat conditions. Our proposal addresses MRFF priority areas across - i) clinical pathways and care, collaborating across the continuum of care, ii) clinical variation underpinned by data driven health care improvement and iii) improving the health of vulnerable groups. To do this we offer collaborative governance models within our AHRTC and across the Australian Health Research Alliance. In component B we will work with the AHRA to improve health outcomes, cutting across systems level challenges nationally through integration of research, education and health care by developing a national health systems improvement and sustainability framework and building capacity in agreed priority areas. The Sydney Partnership for Health Education Research (SPHERE) and Enterprise will co-lead the national health systems improvement and sustainability framework development in partnership with Brisbane Diamantina and NSW Regional Health Partners. SPHERE will also engage in other AHRA initiatives described by other alliance members, specifically building capacity in community involvement in research and innovation, building capacity in Indigenous led research and building capacity in data driven care improvement. The establishment within SPHERE of Clinical Academic Groups such as Aboriginal Health & Wellbeing and the cross-cutting themes in Health Informatics and Health System Improvement and their associated allocation of SPHERE funding will provide in kind support to these national initiatives. MRF9100008	Rapid Applied Research Translation	2018 Rapid Applied Research Translation (Round 2.2)	Central Australian Aboriginal Congress Aboriginal Corporation	Corporation	NT	Researcherenye Wappayalawangka Central Australia Academic Health Science Network	Within MRFF priorities and grant guidelines, CA AHSN has determined its main areas of effort: Workforce and capacity building, emphasising Aboriginal research community; Policy research/evaluation; Health services research; Health determinants/risk factors; Chronic/communicable diseases. Summary: 1. Significant improvement in quality of care in Aboriginal primary health care through developing tools to develop/enhance non-clinical KPIs. 2. Aboriginal Primary Health services will be the focus of consolidating/evaluating the delivery of Trauma Informed Care at all levels within their organisations. 3. A cohort of 800 Indigenous residents has been recruited to Baker's HTLV-1 community survey. It will partner with those already engaged to a Longitudinal Study, expanding to WA's Ngaanyatjarra region. 4. Research has often been imposed on Aboriginal people with little meaningful exchange of knowledge/understanding. To assist Aboriginal communities, services and board members in improving understanding/benefits/outcomes of research, to become partners in driving research. 5. Reports of youth crime and risky behaviour in Alice Springs have increased. There is an absence of young people's voices and input into understanding the issues and identifying solutions for young people most at risk. 6. Effective communications between health staff and patients across the Central Australia Health Service is a critical element in improving health outcomes. It is designed to provide sustained improvement in intercultural communication into policy/practice. 7. Aboriginal people experience of very high levels of psychological distress is unacceptably elevated compared with non-Indigenous. The project involves establishing a prototype SEWB assessment instrument that is culturally relevant and safe. 8. The need for an effective primary health care system is urgent in remote Aboriginal communities in order to "close the health gap". This aims to measure the impact of short-term health staff in the remote Ngaanyatjarra Health Service; co-design and implement a comprehensive, affordable, culturally safe and evidence-based workforce strategy. 9. The burden of disease and mortality rate increases with increasing remoteness—there is a need for effective primary health care services, but also for effective emergency services which give remote residents access to life-saving care. A dedicated Medical Retrieval and Consultation Centre was launched in 2018. This study will evaluate	Not applicable	Not available	One-off/ad hoc	1/08/2020	30/06/2025	Not available	Not available	$ 4,000,000.00	Prior to 03/09/2024
RARUR000080	Rapid Applied Research Translation	2020 Rapid Applied Research Translation	University of New South Wales	University	NSW	Scaling up infectious disease point-of-care testing for Indigenous people	Diagnostic testing with timely return of results is critical for infectious disease management and prevention but is not uniformly accessible for Indigenous people in rural and remote settings. Delays in testing and return of results can lead to serious adverse health consequences including hospitalisations, cancer, and death. Building on ten years of experience and stakeholder engagement, we will scale-up infectious disease point-of-care testing nationally in primary care services. We will use implementation research to evaluate their uptake, acceptability, effectiveness, cost-effectiveness, and sustainability. In parallel we will strengthen the critical support systems essential to integration into healthcare practice. MRRART000068	Rapid Applied Research Translation	2022 Rapid Applied Research Translation	James Cook University	University	QLD	TRIP: OT led environmental assessment and modification for falls prevention	We will implement and evaluate the roll out and scale up of Occupational Therapy led environmental assessment and modification. We will conduct a hybrid type III implementation study involving a pragmatic, multi-centre, stepped wedge cluster randomised controlled trial and concurrent mixed methodologies. This design will enable investigation of implementation strategies across public, private and non-government health services of an already established clinically effective intervention. We will provide this intervention to clusters with a minimal level of 'organisational readiness'. The project will cumulate in a set of resources and tailored implementation strategies for an intervention that is predicted to reduce falls by 39%.	Associate Professor Alison Catherine Pighills	Associate Professor Alison Catherine Pighills, Doctor Anna Caroline Tynan, Doctor Priya Martin, Professor Lindy Maxted Clemson, Professor Sharon Maree Mickan, Doctor Lucylynn Lizarondo, Mrs Susan Louise Melchert, Doctor Ashlyn Janita Sahay, Doctor Linda Joy Furness	Open competitive	1/06/2024	31/05/2029	Not available	Not available	$	2,645,198.00	Prior to 03/09/2024
MRRART000036	Rapid Applied Research Translation	2022 Rapid Applied Research Translation	Charles Sturt University	University	ACT	Translating Cognitive remediation therapy into mental health practice	This study will rapidly translate an evidence-based therapy into four clinical mental health settings with a team of clinician researchers and people with lived experience of mental illness. Cognitive remediation therapy (CRT) has been shown to significantly improve cognitive and socio-occupational functioning in people living with schizophrenia and related conditions. Although cognitive remediation therapy is currently recommended in Australian treatment guidelines, access to the therapy is limited. This study will examine the implementation and outcomes of cognitive remediation therapy. The therapy will be delivered across diverse settings to determine its impact and identify suitable translation strategies for the future.	Associate Professor Julaine Allan	Associate Professor Julaine Allan, Doctor Matt Thomas, Professor Julia Lappin, Associate Professor Frances Dark, Ms Jess Kennedy, Ms Chloe Gott, Ms Samantha Hall, Ms Robyn Murray, Doctor Hazel Dalton, Doctor Alienor Chauvenet, Doctor Alfred Wong, Doctor Nicole Sugden, Mr Matthew Talary	Open competitive	1/05/2024	9/09/2028	Not available	Not available	$	4,391,311.00	Prior to 03/09/2024
MRRART000091	Rapid Applied Research Translation	2022 Rapid Applied Research Translation	The University of Newcastle	University	NSW	Demonstrating and optimising the impact generated from the RART initiative	The first purpose of our project is to prospectively evaluate the potential translation and impact generated by the RART-funded projects, i.e. to ensure appropriate data collection, and ii. to optimise any opportunities to improve their translation. The second purpose is to generate new knowledge of factors that promote the adoption, impact and sustainability of evidence-based healthcare. Our core team has a reputation for leadership and expertise in research impact assessment, and research on medical and health research. This project provides an opportunity to apply this expertise to key policy questions, expand the community of expertise, and to extend the experience of Aboriginal researchers in the evaluation of Aboriginal research.	Mr Simon Mark Deeming	Mr Simon Mark Deeming, Associate Professor Penny Reeves, Doctor Shanthi Ramanathan, Professor Mariko Carey, Doctor Megan Williams, Professor Kim Usher, Ms Gillian Mason, Doctor Kim Sutherland, Doctor Saraid Billiards, Ms Toni Manton, Professor Sarah Larkins, Associate Professor Nicolette Hodyl, Professor Jonathan Karnon	Open competitive	21/04/2024	31/10/2026	Not available	Not available	$	494,986.00	Prior to 03/09/2024
PHRDI000054	Research Data Infrastructure	2020 Primary Health Care Research Data Infrastructure	The University of Queensland	University	QLD	Improving surveillance infrastructure for Indigenous primary health care	The ATLAS+ proposal will enable expansion of the reach and scope of the ATLAS sentinel surveillance network, currently comprising 32 Aboriginal Community-Controlled Health Organisations (ACCHOs) nationally. We will double the number of ACCHOs participating and add new primary care providers and geographical regions to the network. We will expand the scope of the infrastructure beyond sexually transmissible infections and blood-borne viruses, to include vaccine-preventable diseases and chronic conditions. ATLAS+ will increase the quality and capacity of our surveillance and reporting systems and will further support ACCHOs to improve clinical care. ATLAS+ will also prioritise capacity development to strengthen Indigenous Data Sovereignty.	Professor James Ward	Professor James Ward, Associate Professor Federica Barzi, Associate Professor Adrian Bickerstaffe, Doctor Odette Pearson, Doctor Kalinda Griffiths, Professor Rebecca Guy, Professor Helen Marshall	Open competitive	30/06/2021	29/06/2025	Not available	Not available	$	1,990,329.00	Prior to 03/09/2024
PHRDI000009	Research Data Infrastructure	2020 Primary Health Care Research Data Infrastructure	South Australian Health and Medical Research Institute Limited	Medical Research Institute	SA	Registry of Senior Australians: Improving Care and Outcomes in Aged Care	The Registry of Senior Australians (ROSA) is a nationwide aged and health care data linkage platform and outcomes monitoring system developed by SAHMRI. Our project will create a 'big data' platform through extension and expansion of ROSA infrastructure to keep pace with emerging issues (e.g. COVID-19) and continue our ground-breaking research on key, and currently unknown, residential aged care impacts with new datasets (immunisation, rehabilitation and social welfare data). With project partners, we will embed ROSA into routine aged care monitoring and build the sector's digital health literacy. Project outcomes will position ROSA as the only national data solution for evidence-based policy and practice change in residential aged care.	Professor Maria Inacio	Professor Maria Inacio, Associate Professor Maria Inacio, Associate Professor Gillian Caughey, Associate Professor Keith Evans, Ms Megan Corlis, Professor Maria Crotty, Professor Craig Whitehead	Open competitive	30/06/2021	29/06/2025	Not available	Not available	$	1,966,031.00	Prior to 03/09/2024
PHRDI000081	Research Data Infrastructure	2020 Primary Health Care Research Data Infrastructure	University of Melbourne	University	VIC	Platform to Enhance Prostate Cancer Shared care Integration (PEPSI)	The number of cancer survivors requiring long term medical care is increasing. Shared care models are essential to manage these patients effectively. Western Health runs a shared care model for prostate cancer, but it is resource intensive and not sustainable. We propose to innovate and improve shared care by linking data across primary and tertiary settings using a cloud-based platform which is technology agnostic. The platform features treatment algorithms, secure communication and collects standardised data. We aim to demonstrate that this platform enables the safe and effective care of patients in the community, leading to better outcomes, significant hospital avoidance, comprehensive data collection and cost saving.	Professor Niall Corcoran	Professor Niall Corcoran, Associate Professor Shane Hamblin, Associate Professor Edmund Tse, Doctor Guru Iyngkaran, Doctor Karyn Alexander, Doctor Henry Yao, Doctor Ines Rio, Doctor Zina Valaydon, Doctor Shirley Wong, Ms Cindy Ogluszko, Professor Peter Gibbs	Open competitive	30/06/2021	31/12/2024	Not available	Not available	$	1,995,611.00	Prior to 03/09/2024
PHRDI000008	Research Data Infrastructure	2020 Primary Health Care Research Data Infrastructure	Monash University	University	VIC	Optimising health information exchange during aged care transfers	Cross-sector care coordination is a perennial problem for Residential Aged Care (RAC). COVID-19 experiences have seen rapid movement of residents between sectors (RAC facilities, primary care, hospital, ambulance) often en masse, with little or no accompanying information. Despite there being more electronic health data than ever before, information pertaining to RAC remains siloed and is not effectively shared between sectors. We will develop and test a national solution for integrated data sharing that puts the resident at the centre of care and meets the data and system requirements of multiple end users. Outcomes include improved quality and safety of care for RAC residents and health systems savings through increased efficiencies.	Associate Professor Nadine Andrew	Associate Professor Nadine Andrew, Associate Professor Anna Barker, Associate Professor Richard Beare, Associate Professor Chris Moran, Doctor Jue Xie, Doctor Katrina Long, Professor Patrick Olivier, Professor Velandai Srikanth, Professor Karen Smith, Professor Irene Blackberry, Professor Keith Hill, Professor Simon Bell, Professor Terry Haines	Open competitive	30/06/2021	29/06/2024	Not available	Not available	$	1,949,557.00	Prior to 03/09/2024

PHRDI000014	Research Data Infrastructure	2020 Primary Health Care Research Data Infrastructure	The University of Adelaide	University	SA	Imagendo: Diagnosing endometriosis with imaging and AI	This project will provide a cost-effective, accessible, and accurate method to non-invasively diagnose endometriosis. Artificial intelligence using endometriosis ultrasound and MRI images will develop diagnostic algorithms that estimate the likelihood that an individual has endometriosis. Images uploaded by in-built software in imaging machines, will be analysed by this algorithm in real time on a cloud-based digital platform. Integrating with the National Endometriosis Scientific and Clinical Trial and delivering National Action Plan for Endometriosis Priorities and Research Goals, this tool will improve 'access to simpler and less invasive diagnostic tests and treatments' for those negatively impacted by endometriosis.	Associate Professor Mary Louise Hull	Associate Professor Mary Louise Hull, Associate Professor David Gonzalez-Chica, Associate Professor George Condous, Doctor Jodie Avery, Doctor Rebecca O'Hara, Doctor Steven Knox, Ms Aisha Sirop, Ms Catrina Panuccio, Professor Gustavo Carneiro, Professor Jason Abbott	Open competitive	30/06/2021	29/06/2025	Not available	Not available	$	1,990,998.00	Prior to 03/09/2024
PHRDI000076	Research Data Infrastructure	2020 Primary Health Care Research Data Infrastructure	Kimberley Aboriginal Medical Services Limited	Corporation	WA	Regional collaboration to create a Kimberley Health Evidence Data Platform	This project aims to improve the health and wellbeing of Aboriginal people through the development of a linked data platform in the Kimberley region of Western Australia, with a focus on primary health care. The Kimberley Health Evidence Data Platform will be utilised to inform regional research priorities, improve search data availability, guide health service provision and enable effective tracking and evaluation of regional health targets. Delivered in partnership between all Aboriginal Community Controlled Health Services and government primary health care providers in the Kimberley, along with experienced researchers, this project will involve extensive interagency collaboration that builds on existing regional governance structures.	Mr Mick Gooda	Mr Mick Gooda, Associate Professor Julia Marley, Doctor Kimberley Seear, Doctor Emma Griffiths, Doctor David Hendricks, Doctor Lorraine Anderson, Mr Justin Manuel, Mr Rob McPhee, Mrs Erin Stenseke, Ms Lucy Falcocchio, Professor David Atkinson	Open competitive	30/06/2021	29/06/2025	Not available	Not available	$	1,027,835.00	Prior to 03/09/2024
PHRDI000027	Research Data Infrastructure	2020 Primary Health Care Research Data Infrastructure	Menzies School of Health Research	Medical Research Institute	NT	Territory Integrated Care: Primary health data Linkage Using Software	Territory Kidney Care (TKC) is a digital health tool which consolidates electronic health records (EHR) from public hospitals, government-operated primary care services and participating Aboriginal medical services. EHR data from disparate systems is linked to drive point of care clinical decision-making and improve individual and population health. Currently, TKC supports the identification and management of chronic kidney disease (CKD). The proposed TIC-PLUS project will build on the TKC prototype and expand the scope to NT private general practitioner practices and include other preventable chronic diseases. Key aims are to facilitate the integration of health care in the NT including two-way sharing of clinical information. MRFFRD000113	Research Data Infrastructure	2021 Research Data Infrastructure	University of Melbourne	University	VIC	Appropriate Antimicrobial Use: Scaling Surveillance Using Digital Health	Antimicrobial resistance is a major global challenge. This research collaboration brings a multidisciplinary team of antimicrobial stewardship experts from human and animal health with digital health experts to establish a new research platform for antimicrobial appropriateness surveillance. We will use large existing databases of manual surveys and electronic medical records. Natural language processing, machine learning algorithms, and common data models for antimicrobial use metrics and infection indications will be developed to support automation and scaling of antimicrobial prescribing surveys. The platform will facilitate data aggregation and linkage for the first time across all areas of health, and will improve healthcare delivery.	Professor Karen Thursky	Professor Karen Thursky, Doctor Rodney James, Pramode Varghese, Doctor Steve Christov, Doctor Courtney Lerano, Associate Professor Noleen Bennett, Associate Professor Leon Worth, Associate Professor Jo-Anne Manski-Nankervis, Professor Kirsty Buising, Doctor Ruby Biezen, Professor Glenn Browning, Professor James Gilkerson, Doctor Kirsten Bailey, Doctor Laura Hardefeldt, Professor Wendy Chapman, Doctor Daniel Capurro, Doctor Mike Conway, Doctor Douglas Pires, Doctor Vlada Rozova, Professor Monica Slavin, Ms Anna Khanina, Karin Verspoor	Open competitive	30/06/2022	31/05/2026	Not available	Not available	$	2,962,654.00	Prior to 03/09/2024
MRFFRDI000056	Research Data Infrastructure	2022 Research Data Infrastructure	Monash University	University	VIC	A National Intensive Care Research Data Initiative (NICE-Data)	Existing intensive care & prehospital registries for critically ill patients, & a newly established biobank, are not linked & they lack data on trajectory of care, including complications, functional outcomes, long-term survival, readmissions & costs. The National Intensive Care Data (NICE-Data) Infrastructure Initiative will address this unmet need by establishing & extending new & existing data (i.e. funded registries, clinical trials & a biobank valued >$10M) to generate new research data infrastructure for critically ill patients. Completion in 4yrs will lead to informed ICU clinical decision making & improved care: risk prediction tools, reduced complications, improved long-term survival with reduced disability & costs.	Professor Carol Hodgson	Professor Carol Hodgson, Professor John Fraser, Professor Chris Bain, Professor David Pilcher, Doctor Alisa Higgins, Associate Professor Priya Nair, Professor Steve Bernard, Associate Professor Shaun Gregory, Associate Professor Edward Litton, Associate Professor Aidan Burrell, Doctor Andrew Stephens, Professor Daniel Brodie, Doctor Anais Charles-Nelson, Ms. Tessa Broadley, Ms. Shannah Anderson	Open competitive	29/06/2023	30/05/2027	Not available	Not available	$	2,497,605.00	Prior to 03/09/2024
MRFFRDI000104	Research Data Infrastructure	2022 Research Data Infrastructure	The University of Adelaide	University	SA	Are we meeting the health needs of 50,000 children in out-of-home care?	For over a decade, there have been repeated calls for data infrastructure to better support unmet health needs of children in out-of-home care. This project responds to those calls by partnering with care-experienced young people, carer, Indigenous community, clinician and policy representatives. We will bring together existing SA and NSW linked data platforms with frontline health service data to inform better service design, delivery and monitoring. We will: BUILD data infrastructure as working models and a blueprint for national scalability; ANALYSE augmented data on healthcare needs and delivery; REFLECT on health assessment content, delivery of care and system processes; and TRANSLATE project findings using a co-designed roadmap. MRF1202192	Stem Cell Therapies Mission	2020 Stem Cell Therapies	University of Melbourne	University	VIC	Identifying novel therapeutic targets in leukaemia stem cells	Many cancers, including AML, are sustained by a small population of cancer stem cells that possess the ability to self renew indefinitely and regenerate the cancer after therapy. Our ability to develop treatments that eradicate these leukaemia stem cells (LSC) has been hampered by the inability to grow them effectively in the lab to study and understand them. We have recently identified a unique method to grow LSC resulting in the ability to find new treatments for this often incurable cancer.	Professor Mark Dawson	Professor Mark Dawson, Doctor Brendon Monahan, Associate Professor Paul Stupple	Targeted competitive	1/06/2020	31/05/2023	MEDICAL AND HEALTH SCIENCES, Oncology and carcinogenesis, Haematological tumours	Clinical Medicine and Science Research	$	894,180.00	Prior to 03/09/2024
MRF1200678	Stem Cell Therapies Mission	2020 Stem Cell Therapies	University of Melbourne	University	VIC	Translating patient stem cells into personalised screens for age-related macular degeneration	We aim to develop a screening platform for patient stem cell-derived retinal cells, using artificial intelligence to model diseases of the retina in a dish; subsequently screen for 2,900 drugs able to reverse those identified disease specific phenotypes; and test the 10 best compounds on a large bank of patient stem cell-derived retinal cells. The best compounds will be further advanced for clinical translation.	Professor Alice Pebay	Professor Alice Pebay, Professor Alex Hewitt, Associate Professor Kaylene Simpson, Doctor Grace Lidgerwood, Professor Robyn Guymer, Professor Erica Fletcher	Targeted competitive	1/06/2020	31/12/2023	MEDICAL AND HEALTH SCIENCES, Ophthalmology and optometry, Ophthalmology	Basic Science Research	$	881,906.60	Prior to 03/09/2024
MRF1202181	Stem Cell Therapies Mission	2020 Stem Cell Therapies	University of Melbourne	University	VIC	Next generation stem cell therapy for Parkinson's disease	A promising experimental therapy for Parkinson's disease is the use of stem cells that in order to replace the cells lost during the disease process. A challenge for this approach is that upon transplantation into the brain, in addition to the therapeutic cell types, there will also be unwanted cell types such as those that can form tumours. This proposal seeks to establish a novel strategy for removing those cells prior to transplantation.	Associate Professor Lachlan Thompson	Associate Professor Lachlan Thompson, Professor Clare Parish, Professor Colin Pouton	Targeted competitive	1/06/2020	30/11/2022	MEDICAL AND HEALTH SCIENCES, Neurosciences, Central nervous system	Basic Science Research	$	952,873.50	Prior to 03/09/2024

MRF1202042	Stem Cell Therapies Mission	2020 Stem Cell Therapies	Curtin University	University	WA	Optimizing a preclinical model for bioprinting skin aimed at repairing skin loss in patients	This project seeks to develop new treatments for skin loss in patients caused by injury or disease, using the emerging and transforming technology of 3D bioprinting and skin stem cell biology. The project driven by a team of Australian investigators with extensive basic science and clinical expertise uses the pig as a large animal skin repair model to translate recent discoveries into innovative treatments for patients.	Associate Professor Pritinder Kaur	Associate Professor Pritinder Kaur, Professor Fiona Wood, Professor Gordon Wallace, Associate Professor Mark Fear, Doctor Abbas Shafiee, Doctor Zhilian Yue, Cameron Ferris	Targeted competitive	1/06/2020	31/05/2022	ENGINEERING, Biomedical engineering, Biomaterials	Clinical Medicine and Science Research	$ 737,689.50	Prior to 03/09/2024
MRF1201781	Stem Cell Therapies Mission	2020 Stem Cell Therapies	Monash University	University	VIC	Discovering new drugs for epilepsy using personalised medicine	Epilepsy is a serious neurological condition that affects millions of people around the world. For many people with epilepsy the current drugs are ineffective which means their seizures are not able to be controlled. This project attempts to find new drugs for these patients, by testing drugs in human patient cells in a dish. We believe this project will enable us to test thousands of drugs rapidly and find new drugs that can be given to patients with epilepsy.	Professor Patrick Kwan	Professor Patrick Kwan, Doctor Benjamin Rollo, Doctor Chris Langmead, Doctor Katie Ayers, Doctor Alexander Harris	Targeted competitive	1/06/2020	31/05/2022	MEDICAL AND HEALTH SCIENCES, Neurosciences, Central nervous system	Clinical Medicine and Science Research	$ 556,460.60	Prior to 03/09/2024
MRF1202105	Stem Cell Therapies Mission	2020 Stem Cell Therapies	Monash University	University	VIC	Developing novel cellular therapies and tissue engineering approaches for the treatment of muscle injury and wasting disorders using tissue resident muscle stem cells	We propose to develop novel cellular therapies and tissue engineering approaches for the treatment of a muscle injury and wasting disorders using tissue resident muscle stem cells or satellite cells. Our ultimate aim is to accelerate the development of safe, effective and affordable muscle stem cell-based therapies, in an attempt to lessen the disease burden of muscle wasting disorders.	Professor Peter Currie	Professor Peter Currie, Associate Professor Mikael Martino, Professor Laurence Meagher	Targeted competitive	1/06/2020	31/05/2022	MEDICAL AND HEALTH SCIENCES, Other medical and health sciences, Medical and health sciences not elsewhere classified	Basic Science Research	$ 824,480.00	Prior to 03/09/2024
MRF1202224	Stem Cell Therapies Mission	2020 Stem Cell Therapies	Monash University	University	VIC	Human Amniotic Epithelial Stem Cells as Novel Treatment for Autoimmune Vasculitis	Autoimmune vasculitis is a serious disease affecting small blood vessels. Current treatments are partially effective and produce serious side effects from which many patients die. So, safer, effective therapies are needed. Human amniotic stem cells (hAECs) represent a novel, safe and affordable therapy for this disease. Using animal models and patients' cells, we will identify hAECs as an appealing new treatment for vasculitis, paving the way for their progress into clinical trials.	Professor Stephen Holdsworth	Professor Stephen Holdsworth, Doctor Dragana Odobasic, Doctor Poh Yi Gan, Doctor Kim Maree O'Sullivan	Targeted competitive	1/06/2020	30/11/2022	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Nephrology and urology	Basic Science Research	$ 588,396.00	Prior to 03/09/2024
MRF1201805	Stem Cell Therapies Mission	2020 Stem Cell Therapies	Monash University	University	VIC	Engineering a solution to non-alcoholic steatohepatitis through tuning substrate stiffness	Fatty liver disease affects up to 25% of the Australian population and has been identified in children as young as 10 years of age. When the disease progresses to a severe, inflammatory form, it significantly increases the incidence of liver scarring and primary liver cancer. There is no treatment for the disease to date. We propose to bioengineer a solution that uses cells from the amniotic sac to create a novel cost-effective regenerative medicine for this disease.	Associate Professor Rebecca Lim	Associate Professor Rebecca Lim, Professor William Sievert, Professor Euan Wallace, Associate Professor Jessica Frith, Doctor David Greening, Doctor Gina Kusuma	Targeted competitive	1/06/2020	31/05/2022	TECHNOLOGY, Medical biotechnology, Regenerative medicine (incl. stem cells and tissue engineering)	Basic Science Research	$ 472,680.00	Prior to 03/09/2024
MRF2007316	Stem Cell Therapies Mission	2020 Stem Cell Therapies Mission	Murdoch Children's Research Institute	Medical Research Institute	VIC	Evaluating safety and efficacy of bioengineered heart tissue for congenital heart repair	Heart disease is the leading cause of death in infants in Australia. To date, few studies have explored the potential for stem cells in the setting of childhood heart disease. This project aims to evaluate the safety and effectiveness of bioengineered heart tissue in a pre-clinical model of paediatric heart failure. If successful, this approach could radically transform patient outcomes and improve the quality of life of children affected by heart disease. MRF2008223	Traumatic Brain Injury Mission	2020 Traumatic Brain Injury Mission	Curtin University	University	WA	An informatics approach to predict outcomes and monitor intervention efficacy following moderate to severe traumatic brain injury	Moderate to severe traumatic brain injury (TBI) can be devastating for those affected. We will design a way to confidentially gather data on treatment and outcomes of TBI in all States and Territories in Australia, including those in rural, remote and Aboriginal communities. This information will a) help to personalise care for individuals who experience TBI and b) determine which treatments work best for specific symptoms and individuals, to improve the lives of Australians with TBI.	Professor Melinda Fitzgerald	Professor Melinda Fitzgerald, Doctor Leanne Hassett, Doctor Adam Wells, Doctor Gary Mitchell, Doctor Robert McNamara, Professor David Menon, Professor James Harrison, Professor Kate Curtis, Professor Stephen Rose, Professor Meng Law, Professor Terence O'Brien, Professor Paul Maria Parizel, Professor Andrew Holland, Associate Professor Jennifer Cullen, Professor Natasha Lannin, Professor Vicki Anderson, Professor James Vickers, Professor Gavin Williams, Professor Jennifer Fleming, Professor Leanne Togher, Professor Grahame Simpson, Professor Belinda Gabbe, Professor Tamara Ownsworth, Professor Elizabeth Kendall, Professor Skye McDonald, Professor Jennie Ponsford, Professor Michael Reade, Professor Daniel Fatovich, Professor Zsolt Balogh, Professor Mark Fitzgerald, Professor David Cooper, Professor Peter Cameron, Professor Sandra Eades, Professor Elizabeth Armstrong, Associate Professor Sandy Shultz, Associate Professor Kirsten Vallmuur, Associate Professor Dinesh Varma, Associate Professor Adam Scheinberg, Associate Professor Lyndsey Collins-Praino, Associate Professor Anthony Delaney, Associate Professor Rosalind Jeffree, Doctor Sandra Braaf, Doctor Rowena Mobbs, Doctor Bridgette Semple, Doctor Fatima Nasrallah, Doctor Sarah Hellewell, Doctor Jesse Young, Mr Stephen Honeybul, Jodie-Kate Williams, Professor Karen Barlow	Targeted competitive	1/06/2021	31/05/2023	MEDICAL AND HEALTH SCIENCES, Neurosciences, Central nervous system	Clinical Medicine and Science Research	$ 499,815.70	Prior to 03/09/2024
MRF2009099	Traumatic Brain Injury Mission	2020 Traumatic Brain Injury Mission	University of Sydney	University	NSW	From injury to long-term physical activity for people living with traumatic brain injury	This project aims to enhance participation in physical activity for Australians living with moderate-to-severe traumatic brain injury through the adaptation and translation of the newly released WHO physical activity guidelines for people living with disability. This project will identify the current patient journey from injury to community-reintegration, identifying who, where and how physical activity is prescribed, identifying examples of evidence-based care and where service gaps exist.	Doctor Leanne Hassett	Doctor Leanne Hassett, Professor Gavin Williams, Professor Catherine Sherrington, Associate Professor Sean Tweedy, Professor Luke Wolfenden, Professor Maria Crotty, Professor Kirsten Howard, Doctor Abigail Haynes	Targeted competitive	1/06/2021	31/07/2023	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Rehabilitation and therapy (excl. physiotherapy)	Health Services Research	$ 406,506.00	Prior to 03/09/2024
MRF2007705	Traumatic Brain Injury Mission	2020 Traumatic Brain Injury Mission	Monash University	University	VIC	PRECISION-TBI – Promoting evidence-based, data driven care for critically ill moderate-to-severe TBI patients	Our aim is to establish a consumer-enriched, clinician-driven, neurocritical care research collaborative across all major neurotrauma centres in Australia and New Zealand, so as to improve the health and social outcomes for m-sTBI patients. We will achieve this, by completing the following: 1. identifying key knowledge gaps via a bi-national Delphi process; 2) collecting highly granular data on current practice; and 3) establishing the infrastructure to test novel interventions in future RCTs.	Professor Andrew Udy	Professor Andrew Udy, Professor David Cooper, Associate Professor Rosalind Jeffree, Professor Rinaldo Bellomo, Professor Alistair Nichol, Professor Terence O'Brien, Doctor Judith Bellapart, Professor David Menon, Doctor Robert McNamara, Professor Melinda Fitzgerald	Targeted competitive	1/06/2021	30/11/2025	MEDICAL AND HEALTH SCIENCES, Neurosciences, Central nervous system	Clinical Medicine and Science Research	$ 499,477.70	Prior to 03/09/2024
MRF2007671	Traumatic Brain Injury Mission	2020 Traumatic Brain Injury Mission	Monash University	University	VIC	The Australian Traumatic Brain Injury National Data (ATBIND) Project	The Australian Government is investing $50 million over 10 years to better predict recovery outcomes after a traumatic brain injury and to identify the most effective care and treatments. These goals will be difficult to achieve without baseline data, which is currently lacking. This project will provide current national data on the incidence of those with moderate to severe brain injury, as well as identifying existing treatment variabilities, shortfalls and associated outcomes.	Professor Gerard O'Reilly	Associate Professor Gerard O'Reilly, Professor Mark Fitzgerald, Professor Kate Curtis, Yesul Kim, Nick Rushworth, Professor Biswadev Mitra, Associate Professor Jin Tee, Doctor Catherine Hunter, Doctor Courtney Ryder, Associate Professor Delia Hendrie	Targeted competitive	1/06/2021	31/05/2023	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Surgery	Clinical Medicine and Science Research	$ 365,995.00	Prior to 03/09/2024
MRF2007605	Traumatic Brain Injury Mission	2020 Traumatic Brain Injury Mission	Monash University	University	VIC	Exercise therapy for mild traumatic brain injury (mTBI) and persistent post-concussion symptoms (PPCS) across the lifespan	Mild traumatic brain injuries (mTBI) result in debilitating impairments that can persist for months. The clinical management of these injuries is difficult because there are no treatments to improve recovery in patients across the lifespan. This project will test whether an aerobic exercise intervention, that is beneficial in adolescents, can also improve recovery in adults with mTBI patients. We will also develop protocols that can be accessed and used in clinical settings across Australia.	Professor Terence O'Brien	Professor Terence O'Brien, Professor John Leddy, Associate Professor Catherine Willmott, Professor Biswadev Mitra, Associate Professor Sandy Shultz, Doctor Zhibin Chen, Doctor Stuart McDonald, Associate Professor Andrew Morokoff, Professor Karen Caeyenberghs	Targeted competitive	1/06/2021	31/05/2024	MEDICAL AND HEALTH SCIENCES, Neurosciences, Neurology and neuromuscular diseases	Clinical Medicine and Science Research	$ 499,705.00	Prior to 03/09/2024
MRF2007238	Traumatic Brain Injury Mission	2020 Traumatic Brain Injury Mission	University of Tasmania	University	TAS	Transforming Awareness, Literacy & Knowledge of Traumatic Brain Injury (TALK-TBI)	This project assesses current Australian awareness of traumatic brain injury (TBI) to identify gaps in community knowledge that can lead to poor outcomes for individuals living with TBI. We will use innovative educational tools that include stories of lived experience and visual arts to broaden Australians' understanding of TBI. Education will cover the spectrum of injury from mild through to moderate-severe as well as the journey from the initial injury through to moving back into community.	Doctor Jenna Ziebell	Doctor Jenna Ziebell, Doctor Peta Cook, Doctor Kathleen Doherty, Doctor Claire Eccleston, Doctor Tanya Schramm, Professor Melinda Fitzgerald, Doctor Christine Padgett, Professor Anna King, Professor James Vickers	Targeted competitive	1/06/2021	31/05/2025	MEDICAL AND HEALTH SCIENCES, Public health and health services, Health promotion	Public Health Research	$ 999,998.00	Prior to 03/09/2024
MRF2007982	Traumatic Brain Injury Mission	2020 Traumatic Brain Injury Mission	University of Tasmania	University	TAS	Clinical practice guidelines for the management of psychosocial disorders following adult traumatic brain injury	Disorders of psychosocial functioning are common following adult TBI, which result in long-term emotional difficulties and behaviours of concern. They represent a significant barrier to reintegration and engagement in meaningful life goals. Successful management of these disorders is critically important to recovery. This project will develop de novo clinical practice guidelines for the management of psychosocial disorders in adults with TBI.	Doctor Cynthia Honan	Doctor Cynthia Honan, Professor Skye McDonald, Emeritus Professor Jacinta Douglas, Professor Tamara Ownsworth, Associate Professor Grahame Simpson, Doctor Dana Wong, Doctor Travis Wearne, Professor Angela Morgan	Targeted competitive	1/03/2022	28/02/2025	MEDICAL AND HEALTH SCIENCES, Clinical sciences, Rehabilitation and therapy (excl. physiotherapy)	Health Services Research	$ 448,051.00	Prior to 03/09/2024
MRF2008070	Traumatic Brain Injury Mission	2020 Traumatic Brain Injury Mission	The University of Queensland	University	QLD	Australian Clinical Practice Guidelines for the Assessment and Management of Mild Traumatic Brain injury and Post-Concussion Symptoms	Clinical practice guidelines (CPG) provide clinicians with the information they need to care for people with mild traumatic brain injury (mTBI) and post-concussion symptoms. Up-to-date CPGs tailored to the Australian setting are more likely to be used. This project will develop a contextual CPG to facilitate best practice care for people with mTBI. Its recommendations will account for Australian circumstances and at-risk populations, including Aboriginal and Torres Strait Islander peoples.	Professor Karen Barlow	Professor Karen Barlow, Professor Jennie Ponsford, Professor Franz Babl, Professor Vicki Anderson, Professor Gavin Davis, Doctor Julia Treleaven, Professor John Olver, Doctor Gill Cowen, Professor Rebecca Kimble	Targeted competitive	1/03/2022	30/04/2025	MEDICAL AND HEALTH SCIENCES, Public health and health services, Public health and health services not elsewhere classified	Health Services Research	$ 497,834.00	Prior to 03/09/2024
MRF2015762	Traumatic Brain Injury Mission	2021 Traumatic Brain Injury	Curtin University	University	WA	AUS-mTBI: designing and implementing the health informatics approaches to enhance treatment and care for people with mild TBI	Mild TBI (or concussion) can lead to continuing symptoms and isn't well managed. The AUS-mTBI national consortium will build online platforms including an App, to facilitate collection of mild TBI data from people across Australia. The team will analyse that data and identify the factors that predict optimal outcomes. The team will then feed this information back into our platforms, to create an accessible, evidence-based resource to guide care and improve outcomes for people with mild TBI.	Professor Melinda Fitzgerald	Professor Melinda Fitzgerald, Doctor Jonathan Bullen, Professor Karen Barlow, Associate Professor Lyndsey Collins-Praino, Doctor Jesse Young, Doctor Sarah Hellewell, Professor Kirsten Vallmuur, Mr Alexander Ring, Associate Professor Peter Bragge, Associate Professor Grahame Simpson, Associate Professor John Gilroy, Professor Natasha Lannin, Professor Daniel Fatovich, Doctor Michael Makdissi, Professor Patrick Kwan, Professor Christopher Levi, Associate Professor Zongyuan Ge, Professor Gavin Davis, Professor Belinda Gabbe, Professor Paul Parizel, Mr George Charalambous, Professor Franz Babl, Professor Kate Curtis, Professor Karen Caeyenberghs, Ms Jennifer Cullen, Associate Professor Sandy Shultz, Patricia Ratajczak, Professor Vicki Anderson, Associate Professor Delia Henrie, Professor Terence O'Brien, Doctor Fatima Nasrallah, Professor Elizabeth Ammstrong, Professor John Olver, Professor Leanne Togher, Nick Rushworth, Professor Jennifer Fleming, Professor Biswadev Mitra, Doctor Gary Mitchell, Doctor Stuart McDonald, Professor Michael Reade, Maayken van den Berg, Professor Jennie Ponsford, Jodie-Kate Williams, Doctor Jenna Ziebell, Gill Cowen, Professor Alison Hutchinson, Associate Professor Andrew Gardner, Professor Tamara Ownsworth, Professor David Menon	Targeted competitive	1/06/2022	31/05/2026	MEDICAL AND HEALTH SCIENCES, Neurosciences, Central nervous system	Clinical Medicine and Science Research	$ 2,999,658.00	Prior to 03/09/2024
MRF2035165	Traumatic Brain Injury Mission	2023 Traumatic Brain Injury	Monash University	University	VIC	Implementing evidence-based care for cognitive and psychosocial consequences of moderate-to-severe traumatic brain injury	Traumatic brain injury (TBI) causes cognitive and behavioural changes that impact independence, work, relationships and mental health. This research will assess needs, barriers and facilitators to service delivery for these issues across Australia, including people in rural areas, culturally and linguistically diverse groups and Aboriginal and Torres Strait Islander peoples and harness this information to implement best practice guidelines for cognitive and psychosocial rehabilitation after TBI.	Professor Jennie Ponsford	Professor Jennie Ponsford, Professor Peter Bragge Emeritus, Professor Jacinta Douglas, Professor Jennifer Fleming, Doctor Cynthia Honan, Professor Natasha Lannin, Professor Tamara Ownsworth, Doctor Bruce Powell, Associate Professor Grahame Simpson, Associate Professor Renerus Stolwyk, Professor Leanne Togher, Doctor Jessica Trevena-Peters, Doctor Travis Wearne, Doctor Hayley Williams, Associate Professor Dana Wong	Targeted competitive	1/06/2024	31/05/2029	HEALTH SCIENCES, Allied health and rehabilitation science, Rehabilitation; HEALTH SCIENCES, Health services and systems, Health and community services; INDIGENOUS STUDIES, Aboriginal and Torres Strait Islander health and wellbeing, Aboriginal and Torres Strait Islander psychology	Clinical Medicine and Science Research	$ 2,999,957.15	Prior to 03/09/2024
MRF2035383	Traumatic Brain Injury Mission	2023 Traumatic Brain Injury	University of Sydney	University	NSW	Implementation of the Australian Physical Activity Clinical Practice Guideline for people with moderate to severe traumatic brain injury	The overall goal is to enhance participation in physical activity for children, adolescents, adults, and older adults living with moderate to severe traumatic brain injury (msTBI). To achieve this goal we aim to implement the Australian Physical Activity Clinical Practice Guideline for people with msTBI in health services across Australia. Health services will be supported to implement the guideline by addressing likely barriers to implementation, including those unique for priority populations.	Associate Professor Leanne Hassett	Associate Professor Leanne Hassett, Doctor Bernadette Brady, Professor Ian Cameron, Professor John Gilroy, Doctor Abigail Haynes, Doctor Liam Johnson, Doctor Rakhee Raghunandan, Associate Professor Kris Rogers, Associate Professor Adam Scheinberg, Professor Catherine Sherrington, Professor Jennifer Smith-Merry, Associate Professor Sean Tweedy Gabrielle Vasallo, Professor Gavin Williams, Professor Luke Wolfenden	Targeted competitive	1/06/2024	31/05/2029	HEALTH SCIENCES, Allied health and rehabilitation science, Allied health and rehabilitation science not elsewhere classified; HEALTH SCIENCES, Public health, Health promotion; HEALTH SCIENCES, Health services and systems, Implementation science and evaluation	Health Services Research	$ 2,322,461.80	Prior to 03/09/2024
