

Care Minutes in Residential Aged Care: Targets and Delivered minutes delivered by Service

Approved providers of residential care services are required by law to ensure a certain amount of direct care minutes is provided to care recipients at a service each quarter, worked out in accordance with section 9 of the Quality of Care Principles 2014:

[Quality of Care Principles 2014](#)

We use the method set out in section 9 of the Quality of Care Principles 2014 to work out the required amount of direct care minutes for each service (known as service level care minute targets). Approved providers of residential care services with concerns regarding the accuracy of published care minute targets and care minutes delivered should contact the department via the following email address:

ANACCDDataandAnalysis@health.gov.au

As at October 2024, the care minutes responsibility increased to a sector-wide average of 215 care minutes per resident per day, including 44 minutes of direct registered nurse (RN) minutes. Additionally, providers have the flexibility to meet up to 10% of their service-level RN targets with care time provided by enrolled nurses (ENs). For example, for a service with an RN target of 44 minutes, 4.4 EN minutes may be counted. This spreadsheet has been updated to include EN minutes to provide consistent information for researchers.

Approved providers report care hours for registered nurses, enrolled nurses and personal care workers (PCWs) in the Quarterly Financial Report (QFR). This information and the reported occupied bed days (OBDs) is used to determine the care minutes delivered to residents living in aged care homes.

[Quarterly Financial Report](#)

The department publishes a dashboard on the care minutes performance at the sector level to provide a comprehensive overview of care minutes. By ensuring greater transparency in reporting care minutes, older people will have better access to information that will enable them to make informed decisions about their care needs.

[Care minutes in residential aged care dashboard](#)

The Modified Monash Model (MMM)

The MMM is a measure of remoteness and population size used by the department to define whether a location is a city, regional, rural, remote, or very remote. Locations are categorised from MM 1 – MM 7, with MM 1 denoting a major city and MM 7 a very remote location. AN-ACC uses 2019 MMM categories based on the Australian Statistical Geography Standard – Remoteness Areas framework which are updated after each Census.

MMM Category (2019)	Description
MM1	Metropolitan areas
MM2	Regional centres
MM3	Large rural towns
MM4	Medium rural towns
MM5	Small rural towns
MM6	Remote communities
MM7	Very remote communities
