

You have choices for
cervical
screening

Kara was in
control of her
own test

self-swab

Did you know cervical cancer is preventable?

Early detection through routine screening could save your life.

Women and people with a cervix aged 25–74 should have a **Cervical Screening Test** every 5 years.

Diala felt more comfortable doing her own test in private

Your doctor can do the test, or you can do it yourself using a simple swab.

It's your Cervical Screening Test. **Own It.**

Talk to your doctor next time you're due.

Vivian found the test quick and easy to do
