

What happens when my healthcare provider collects my Cervical Screening Test sample

1

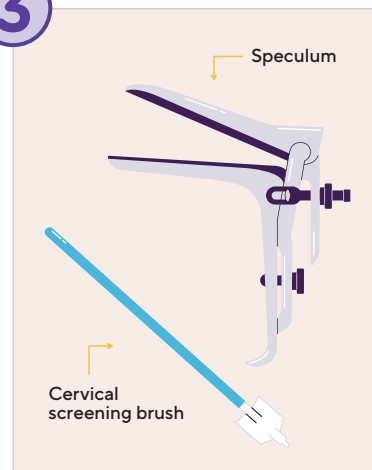

You will be in a private space with your healthcare provider – usually a doctor, nurse, or trained health worker.

2

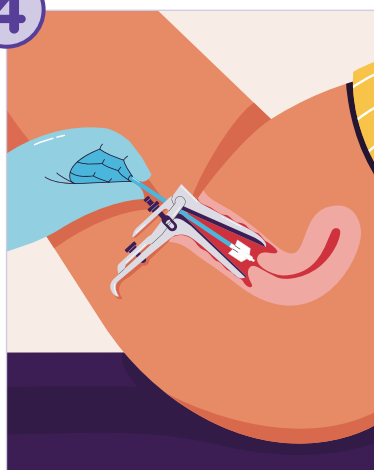

You will be asked to remove your clothes below the waist and lie on your back with your knees apart. You can use a sheet to cover yourself.

3

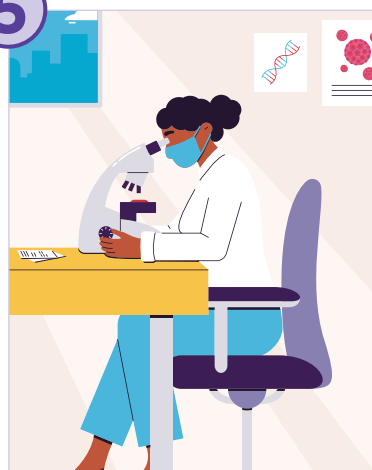

Your healthcare provider will place a tool called a speculum into your vagina and open it. The speculum makes it easier for them to see your cervix.

4

Your healthcare provider will use a soft brush to take a small sample of cells from your cervix. It might feel uncomfortable but should not hurt. If it you feel pain, tell them straight away.

5

Your healthcare provider will send your sample to a pathology laboratory to be tested.

Your healthcare provider will let you know your results and discuss any next steps with you.
