- Department of Health, Disability and Ageing, 2026, Psychology Supply and Demand Study

Date of Data Extraction:

24 July 2026

Purpose of the Analysis:

Underlying data supporting the calculation of demand and unmet demand in the Psychology Supply and Demand Study (April 2026), released for the purposes of an FOI request.

Notes on the Analysis:

Activity projection combines activity data from multiple administrative data sources (detailed in the methodology paper) and was projected using a GLM model with population forecast as the denominator.

The numbers for 2019 to 2023 represent historic data or "actuals".

The numbers for 2024 to 2038 represent projected activity.

Demand activity - Psychology services from multiple data source are combined to calculate the demand activity. The number of services alone is not a sufficient metric for comparison as each require varying levels of resources, particularly in terms of workforce effort. This measure does not consider the severity of conditions, complexity of procedures, or degree of workforce input required. To address this, services or separations are converted into a more universal metric known as units of demand activity.

Please refer to the Psychology Supply and Demand method paper available at <https://hwd.health.gov.au> for further details on the methodology

- Australia's Future Health Workforce (AFHW) 2019 to 2023

Date of Data Extraction:
30 July 2026

Purpose of the Analysis:

Underlying supply data used in the calculation of supply, demand and unmet demand in the Psychology Supply and Demand Study (April 2026), released for the purposes of an FOI request.

Notes on the Analysis:

The psychology workforce data is obtained from Australia's Future Health Workforce (AFHW) dataset. AFHW datasets are created from the National Health Workforce Datasets (NHWDS) for modelling purposes. A sequence of rules (supply criteria) is applied to each NHWDS to determine which practitioners meet the definition of supply for each profession (and sub-groups where applicable). The headcount and workload of these practitioners, along with other variables required for modelling, are included, derived or imputed in the AFHW datasets.

Psychology Supply and Demand Modelling consultation

The Australian Psychological Society (APS) commends the work of the Health Workforce Data Intelligence Unit, within the Commonwealth Department of Health, Disability and Ageing, in undertaking supply and demand modelling as part of Recommendation 17 of the Health Practitioner Regulatory Settings Review ([Kruk Review](#)) commissioned by National Cabinet. We understand that psychologists have been identified by the [Health Workforce Taskforce](#) as a priority profession.

On 16 July 2025, a meeting was held with psychology industry stakeholders, including the APS, to report on the Psychology Supply and Demand Study results provided in a draft report. We are writing to express our grave concerns about the contents of the draft report, not only due to the extreme shortfall projected for the psychology workforce by 2038, but also the lack of clear recommendations to address the predicted shortage of psychologists, other than mention of the upcoming Education and Training Review, and the suggestion of "service substitution" as a potentially viable solution (p. 31).

We strongly urge you to reconsider the conclusions and implications of the modelling with specific actionable recommendations to urgently grow the psychology workforce. To simply acknowledge the shortfall without developing a solution places the mental health and wellbeing of Australians at serious risk.

Importance of psychology and psychologists

Australians need access to evidence-based, high quality psychology services, across a broad range of diverse settings, to support their wellbeing, economic participation and engagement in the community. Psychologists have advanced technical and scientific training and work both independently and within transdisciplinary teams and are an essential profession to promote wellbeing in all aspects of society (e.g., school and education, forensic and justice settings, health, family life, workplace, sports and exercise, public service, public health, and communities)¹.

Unfortunately, there are enduring misunderstandings about psychologists' role and competencies. Psychology is a profession deeply grounded in both science and humanity and distinguishes itself from other mental health professions through its focus on understanding the aetiology of behaviour and mental processes, rather than just treating symptoms. As regulated, registered health practitioners, psychologists have a deep commitment to evidence-based practice.

In addition, psychologists have a broader scope of practice compared to other mental health professionals named in the report, including assessment and diagnosis, along with treatment and research, and typically work with more complex cases.

Service substitution risks framing mental health practitioners' work in terms of discrete tasks. Viewing mental healthcare primarily in terms of technical tasks and activities detracts from recognising the unique underlying disciplinary foundations and broader professional and relational context in which this care takes place. Framed as a technical activity, there is an illusion that tasks within a practitioner's scope of practice are necessarily interchangeable with those carried out by other professions. This overlooks differences in training, fundamental commitment to research and evidence-based practice, regulation, ethical standards, professional support and clinical autonomy which shape the way in which services are delivered. Such an approach also ignores the influence of theories of human behaviour, motivation and change which practitioners are applying through their clinical judgment and as part of their ongoing professional training and responsibility.

What has limited growth in the psychology workforce?

The APS has identified three main factors which are limiting the sustainable growth and development of the psychology workforce in Australia:

1. Previous Government reforms and associated health policies;
2. Constraints on resources needed to train future psychologists due to higher education funding policies, including current banding, Commonwealth Supported Places (CSPs) and Commonwealth Prac Payments; and
3. The absence of coordination for supervised placements to support psychologists to complete their professional training.

The impact of Government reforms and associated health policies

Apart from clinical psychology, higher education programs in the other eight Areas of Practice Endorsements (AoPEs)¹ are available at fewer than five universities across Australia, limiting the number of future psychologists in these important areas of practice. Significantly, this is not a question of demand: it is a matter of sustainability of these courses for higher education institutions.

Funding to train psychologists other than clinical psychology, or generally registered psychologists, is inadequate. Current funding models for higher education continue to privilege clinical psychology. This trajectory signals a looming risk that the unique competencies and scopes of practice of other Australian psychologists will be lost. Further, the differentiation of clinical psychologists and other psychologists has historical origins in the context of the Better Access initiative, but the distinction is frequently applied in other settings without any justification – particularly in terms of scope of practice. Often positions for psychologists are advertised (including by public sector agencies) requiring an endorsement in clinical psychology where this is not necessary nor appropriate. Such actions limit the full engagement of the psychology workforce in areas of critical need. This is particularly concerning given existing difficulties to meet current psychology workforce demands and maintain a sustainable psychology workforce.

Crucially, we are losing diversity in the psychology workforce and additional knowledge and competencies in specific areas. Broad access to training for all nine AoPE's is essential to provide choice for the individuals, organisations and communities in terms of who and what services they can access. However, it is currently estimated that, on average, universities lose around \$70,000 per student in the higher degree pathways (leading to AoPEs).

¹ Clinical neuropsychology, clinical psychology, community psychology, counselling psychology, educational and developmental psychology, forensic psychology, health psychology, organisational psychology, and sport and exercise psychology.

This has resulted in the situation where the health system is in desperate need for more psychologists, yet higher education providers are reluctant to increase places as every addition to the number of students leads to a greater risk of course closure due to the increased financial loss. This limits the capacity for the tertiary system, as it stands, to meet workforce needs for psychology – in general and for most AoPEs. Australia risks falling behind other countries with regard to these diverse areas of psychological expertise, with many having a direct impact on the risk of mental ill-health and suicide in various settings including prisons, schools and hospitals. The loss of diversity of psychological practice in areas such as education and development, clinical neuropsychology, forensic, and community psychology, will have profoundly negative implications for future Australians. We cannot afford to lose this expertise.

Improve higher education funding

Constraints on higher education funding and resources needed to train future psychologists must be addressed to improve workforce numbers. This topic was discussed in length in our Pre-Budget Submission 2023-2024². The APS was pleased that the Federal Budget 2023-24 subsequently included \$91.3 million in funding over five years to boost psychology workforce numbers through the addition of increased psychology post-graduate placements, internships, supervisor training and a redesign of psychology higher education pathways. While we appreciate this one-off commitment, ongoing funding is required to support training for psychologists and workforce development, with a particular focus on building programs across all nine AoPEs to maintain diversity in the psychology profession.

To increase the psychology workforce, the APS calls on the Government to:

- Fund higher education providers to reinstate and/or develop appropriate Master's programs (both Masters of Professional Psychology and, in particular, for AoPEs) – including through the provision of more Commonwealth Supported Places (CSPs) – to ensure adequate diversity and expertise within the psychology workforce.
- Shift the banding for psychology training to be equivalent with Medical Studies in Funding Cluster 4, to enable higher education providers to train more psychologists.

As training for psychologists currently stands, completion rates for students with 3-4 years training is incredibly high, however, there are not enough places in postgraduate courses for all of these students. If the number of places in Master's programs (Master of Professional Psychology (MPP) and AoPEs) were increased to enable at least a greater proportion of students to continue their studies, we could effectively change the psychology workforce numbers in a comparatively short period of time. In addition, the cost of psychology training is not adequately covered by Commonwealth Supported Places, leaving either the education provider or the student to cover a substantial amount of the study costs.

Due to the Psychology Board of Australia's (Ahpra) supervision requirements, training psychologists is labour intensive and, therefore, expensive. Clearly, this needs to be addressed, through both innovative solutions and by urgently scaling up the workforce through increased funding and opportunities for training for psychologists, especially post-graduate programs. Equal banding between mental health and physical health and funding to increase Commonwealth Supported Places would demonstrate commitment from the Government to meet the health and mental health needs of the Australian population.

Extend Commonwealth Prac Payments to postgraduate psychology students

Since it was first introduced, the APS has called on the Government to extend the Commonwealth Prac Payment to postgraduate psychology students on placement and include a loading for students in rural and remote areas.

This measure would reduce the financial burden on postgraduate psychology students associated with undertaking unpaid placements while completing their studies. Psychology students experience the same placement-related financial pressures as students studying to be a nurse, midwife, social worker or teacher. As such, this measure would therefore rely on the same policy rationale as the initial scope of the Commonwealth Prac Payment. Funding this initiative would provide tangible expression to the Government's previously stated commitment to supporting the development and sustainability of the psychology workforce.

Introduce a national placement model to support psychology workforce requirements

As noted above, each year, thousands of psychology graduates with 3-4 years of study, including the full scope of theory and knowledge of psychological science that underpins our competencies, would like to enter the mental health workforce. However, there is a current constrictive bottleneck relating to the practical placement stage of Master's training, caused by limited placement opportunities and a paucity of appropriately trained supervisors.

Federal Government support for a nationally coordinated placement system could change that within a matter of years. Supervised placements are critical to the skill development required in psychology training. However, higher education providers will not increase their intake numbers if they are uncertain about whether they can provide adequate placement opportunities with the required, labour-intensive, supervision.

As previously referenced, the main issue with training psychologists is the expense. This is associated with the cost of placement and placement supervision. Higher education providers spend a lot of time and resources each year ensuring that individual placements are secured within appropriate agencies. The Federal Government can assist by establishing a national system of placements - maintained by appropriate funding for specific support programs. The expertise and skills psychologists offer, across the board, are unique and required to support the mental health of Australians.

A national placement program is urgently required to address this situation and increase practicum opportunities for post-graduate psychology students. Over many years, the APS has called on the Government to:

- Fund the APS to oversee quality, evidence-based placements with appropriate supervision, taking the financial burden away from universities.
- Support the APS to negotiate contracts with state-based departments e.g., Education, Health, Corrective Services etc. on behalf of the Federal Government - to provide quality assured placements for post-graduate psychology students.
- Promote workforce opportunities in rural and remote locations, and with our most vulnerable groups, by funding the APS to arrange intensive student placements in these areas.
- Provide psychology graduates with incentives to work in rural and remote locations equivalent to those being offered to doctors and nurses, i.e., by eliminating their HECS debt, providing scholarships and other Medicare-related benefits

A national placement system would lead to:

- Growth in the national psychology workforce through an increase in university places, as training placements are guaranteed, allowing programs the capacity to scale.
- Higher education providers being supported to focus on teaching, with workforce distribution, training and supervision managed separately.
- The ability to place the psychology workforce in areas with current shortages (including rural and remote areas or with at-risk groups).
- The Department of Health, Disability and Ageing being able to develop a psychology workforce plan, with improved access to data on workforce activities and outcomes.

Psychology workforce research – to address issues with data collection and current supply and demand modelling

While there have been multiple attempts to understand and reform the mental health workforce in Australia (including the [Scope of Practice Review](#) and [National Mental Health Workforce Strategy 2022-32](#)), these projects have primarily taken a top-down perspective without due consideration for the individual characteristics of each profession.

More importantly, there has been little engagement with the experience and expertise of health professionals themselves. The career journeys of health practitioners, the sociocultural factors which shape professions, and the pain points of working as a health professional have not been addressed. This has led to unhelpful assumptions or overgeneralisations in relation to professions including psychology, inhibiting effective and concerted efforts at reform.

The current supply and demand study undertaken by the Department clearly confirms that despite overall growth of the psychology profession – there is a significant deficit in supply which is only projected to increase by 2038. Investment in understanding the psychology workforce and establishing the means to obtain appropriate and accurate data about the workforce, is critically important. This includes clear data on Aboriginal and Torres Strait Islander psychologists and factors relating to the retention of psychologists.

Given the vital contribution of psychologists in and beyond the mental health system, there is an urgent need to understand the factors influencing workforce participation. This includes an exploration of barriers to full workforce participation, with consideration of potential structural or regulatory issues which limit clinical engagement.

As 80% of the total psychology workforce is female³, considerations of gender will be critical in this work, both in terms of supporting the full economic and social participation of women and ensuring that there is diversity of gender within the psychology profession. These efforts must be advanced in parallel with initiatives to increase the psychology workforce headcount.

Before developing further workforce strategies, we call for a solution-oriented, collaborative and profession-led project to understand the psychology workforce and to identify and remedy the barriers to full workforce participation.

This would involve the APS undertaking research to develop a national psychology workforce strategy to understand and address the gap in FTE caused by a majority female, typically part-time workforce (where clinical FTE is around 60% of headcount and trending downwards), thus ensuring a real and sustainable increase in the psychology workforce not just an increase in headcount.

The APS recommends the Government fund us to develop an evidence-based National Psychology Workforce Strategy. This Strategy would provide actionable and evidence-based advice to governments about how to equip, sustain and extend the psychology workforce in Australia. As a profession-led project, this initiative would draw on the resources of the APS as the peak body for psychology, including through the vast expertise of APS members as the largest body of trained scientist-practitioners in Australia. Further details about the APS proposed psychology workforce research are available upon request.

While this letter is detailed, we believe it is important to take this opportunity to outline both our concerns with proposed solutions to address the psychology workforce shortage, and to articulate the ways in which the APS can meaningfully contribute to the psychology supply and demand modelling and support efforts to address the projected shortfall of psychologists into the future.

We are concerned that the Education and Training Review, with a focus on a more efficient pathway to registration as a psychologist, will not adequately address current funding issues that restrict the provision of higher education in psychology, or the challenges associated with finding, supporting and funding professional placements for postgraduate students. It is critical to include consideration of these factors, and most specifically current higher education funding models, in any attempt to substantially and sustainably increase the psychology workforce. In addition, to ensure workable solutions, we understand that an all-of-government response will be required at both federal and state/territory levels.

I would be pleased to meet with the Department to discuss our recommendations to improve the psychology workforce supply and the critical need to fund us to undertake the proposed research. I can be contacted at our National Office on ^{s47F} or by email at ^{s47F}

Yours sincerely,

^{s47F}

Dr Zena Burgess, FAPS FAICD
Chief Executive Officer
