4. Provide a short overview of your practice's approach to continuing professional development and training. Please include details of any advanced credentialling or training in women's health, endometriosis or pain management (200 words max.)	s22 [redacted] Case discussions frequently occur between clinicians as well as the sharing of information gathered when staff/colleagues attend conferences or workshops. TWHC is also able to partake in in-services by local specialists. TWHC is an accredited GP registrar training post for registrars keen to extend their skills particularly in the area of Women's Health and undertake regular weekly teaching sessions with trainees for upskilling. s22 [redacted]

5. OPTIONAL: Provide any further information to support your application (200 words max.)	The Women's Health Centre Southern Highlands is a primary care service providing direct access to women's health clinicians without referral. We recognise the specific needs of women throughout life's phases, from pre-puberty through to menopause and provide tailored clinical services for supporting and enhancing health and well-being. We strive to provide accessible, affordable, dedicated services addressing these health care needs with a strong commitment to evidence based practice and patient centred care. TWHC is currently a referral pathway for local GPs in the area for patients presenting with women's health, sexual and reproductive health issues. Of note, we have regular referrals for IUD insertion and after an IUD assessment, IUD insertion and subsequent IUD check, women are referred back to their GP with a letter regarding the procedure for patient records.

Extended response questions

1. Provide a short overview detailing how your practice currently manages patients with endometriosis (suspected or diagnosed) and / or pelvic pain. Response may include examples of diagnostic capability, multidisciplinary care team management *200 words max.*	Patients book a consultation with a general practitioner. This may be a standard appointment (short 15 mins or long 30 mins) or a specialist "Women's Health Clinic" appointment (30 minute, bulk billed appointment with a female GP which discusses all aspects of a woman's health including gynaecology, pregnancy or menopause, CST, breast screening, bone health, mental health and CVD risk). In all of these appointments there is an opportunity to discuss endometriosis and pelvic pain. All GPs have knowledge and skills in diagnosis and management of endometriosis. However, we have a number of GPs in our clinic with special interests, qualifications and experience in Women's Health. Seven of our eleven GPs are female. Doctors with knowledge gaps in the area of pelvic pain can talk with one of the GPs who work more often in Women's health. Three of these doctors are accredited GP supervisors with RACGP or ACRRM and are experienced teachers and educators. We have an on-site ultrasound machine which most of our Women's Health GPs are trained in using. We also have foetal doppler US for antenatal care.
2. Provide a short overview of current referral pathways your practice utilises for managing patients with endometriosis and / or pelvic pain. Response may include details of local specialists, allied health or tertiary supports *200 words max.*	- We refer patients for pathology and radiology locally (e.g. Southern IML Pathology at Milton Medical Centre and SE Radiology in Ulladulla). SE radiology have x-ray, US and CT capabilities. - We also refer to specialists (obstetricians and gynaecologists) in Nowra, Wollongong, Sydney and Canberra. - We have good relationships with local physiotherapists who specialise in Women's Health, and use a collaborative approach to management of pelvic pain. - One of these local physiotherapy practices comes to Milton Medical Centre specifically for Women's Health. - We have had an arrangement in place with local physiotherapists who have come to our practice to conduct practical training and education with our medical and nursing team on the subject of pelvic pain. - Our nurses assist our general practitioners in comprehensive GP care, including provision of GP management plans and referrals to allied health. - We also have relationships with local psychologists who assist in caring for patients with chronic pain, fertility challenges or any psychological distress (which endometriosis or pelvic pain could be contributing to). - Opposite our practice is the Milton Ulladulla Hospital where we can transfer patients in acute pain or in emergencies. We have GPs on our team who work in emergency or have admitting rights at the hospital for inpatient care.

FAMILY MEDICAL CLINIC

The Garden Family Medical Clinic – 9/170 Murdoch Drive, Murdoch

Provide a short overview detailing how the general practice currently manages patients with endometriosis (suspected or diagnosed) and / or pelvic pain. Response may include examples of diagnostic capability, multidisciplinary care team management (200 words max.)

- The Garden Family Medical Clinic provides a holistic, comprehensive, caring, and supportive approach to all females presenting with chronic pelvic pain and endometriosis. We recognise the importance of a multi-disciplinary team and broad lens to consider the impact on physical and mental wellbeing.
- We practice an evidence-based approach. We use the latest guidelines, policies and procedures for investigation and treatment of patients we see.

s47G(1)(a), s47F [redacted]

This document has been released under the Freedom of Information Act 1982 (Cth) By the Department of Health, Disability and Ageing

- Many of our appointments are long appointments (30-40 minutes) as we recognise many of our patients require more than a standard 15-minute appointment.
- Our GP's proactively screen for a range of associated conditions that are equally important when dealing with chronic pelvic pain and endometriosis (mental health, sexual health, domestic violence, gender diversity and fertility management).
- Our nursing team are experienced (four female registered nurses). One of our nurses is a midwife with extensive gynaecological and obstetric experience s22 [redacted] s22 [redacted] to support women who have experienced early pregnancy loss.

the garden
FAMILY MEDICAL CLINIC

Provide a short overview of current referral pathways the general practice utilises for managing patients with endometriosis and / or pelvic pain. Response may include details of local specialists, allied health or tertiary supports (200 words max.)

s22

s22 . We are fortunate to have easy access to these hospitals along with a strong relationship with their specialists, often being able to contact them by mobile phone to discuss cases and access prompt referrals.

- Patients referred to our clinic will be provided with a seamless booking and follow up experience.

s22

- We are close to radiology clinics including specialist gynaecological clinics such as Western Ultrasound for Women (within 1km drive).
- We use health link and e-faxing for referrals and have 24/7 IT support.
- We have Western Diagnostic Pathology on site for all blood testing, cervical screening and STI screening tests.
- Our two female clinical psychologists are on-site and provide priority access to our patients. Mental health care plan referrals are accepted.
- An accredited dietician will commence in 2023 and will provide support for female patients seeking advice on dietary interventions.
- We also offer transmagnetic stimulation (TMS) on site, with easy referral and access to psychiatry to initiate, offering evidence-based treatment for chronic pain and depression

Provide a short overview of the general practice's capability as outlined in the assessment criteria. Response may include details on practice volumes, Page 4 of 5 an indication of service affordability (out of pocket costs or bulk billing) and communities served by the general practice e.g., CALD, First Nations, low socio - economic backgrounds (200 words max).

- We offer bulk billing to all health care card holders, pension card holders, senior card holders, children and ATSI patients. We are open to bulk billing of other patients outside this scope.
- s22
- Our GP clinic is brand new. We have capacity to grow and offer several 'on the day' appointments for patients which are reserved for patients who need acute care.
- s22
- We offer telehealth services both via phone and video.
- s22
- s22 We have 10 consultation rooms, three private procedure rooms (with televisions for helping to distract patients).
- We recognise the importance of mental health when considering chronic pain, our clinic is designed to be a welcoming space, non-judgmental and calming
- s22
- All our doctors, nurses and healthcare assistants are LGBTQI friendly and trained in understanding the needs of different patient groups including the correct use of pronouns which is also embedded in our registration process.
- We recognise the importance of managing the health inequalities of Indigenous people, our waiting area has original indigenous artwork with welcome to country signage.
- We are currently using many of the Medicare items available for patients suffering chronic conditions and ATSI health assessments.
- We strive to provide *culturally sensitive care* as well as utilising interpreting or hearing-impaired services. All our clinical staff are registered with Translator Interpreter Services (TIS).
- Two of our GP's are fluent in Chinese, Cantonese and Mandarin

Section 2: Extended response questions	
1. **Provide a short overview detailing how the GP practice currently manages patients with endometriosis (suspected or diagnosed) and / or pelvic pain. Response may include examples of diagnostic capability, multidisciplinary care team management (200 words max.)**	A first-line intervention is referral to our in-house pelvic floor therapist (physio) who then works closely with the GP to feed back about the management plan including any next line of intervention or referral. Usually referral for imaging occurs at this early point, for diagnostic purposes and to exclude other diagnoses. The pelvic floor therapist uses in clinic/on site ultrasound for biofeedback to image the bladder and pelvic floor (as part of treatment rather than diagnosis). Multi-disciplinary management proceeds, including pain management, co-managed between GP, pelvic floor therapist and in-house psychologist (if required). We have two psychologists, soon to be three. A common option offered is an IUD which can be inserted at Northside by one of two female GPs highly experienced in IUDs. We have the only doctor that we are aware of who is a registered prescriber of medicinal cannabis in the NT and the other GPs refer to her for this if required as part of pain management. This has been a very interesting and effective new pain management that our GPs have been finding useful. If required, referrals may include to a local gynaecologist privately or through RDH. Other referrals – see below section.

This document has been released under the Freedom of Information Act 1982 (Cth) By the Department of Health, Disability and Ageing

s47G(1)(a)

Section 2: Extended response questions

2. Provide a short overview of current referral pathways the GP practice utilises for managing patients with endometriosis and / or pelvic pain. Response may include details of local specialists, allied health or tertiary supports (200 words max.)	Primary referral is in-house to our pelvic floor therapist who has a decade of experience in and passion for endometriosis and pelvic pain. s22 Local specialists are the gynaecologists via RDH outpatients and the four private gynaecologists servicing Darwin, for laparoscopy for diagnosis and management if needed. s47G(1)(a) is our local infertility service and we have a good relationship with their specialist GPs. We also have a good relationship with the local s47G(1)(a) s47G(1) for support for those who have experienced sexual violence. There is no dedicated endometriosis and pelvic pain service in Darwin however we have referred interstate to specialists in this area, for more complex and/or chronic cases. This usually requires a private gynaecologist (as interstate public hospitals generally do not accept interstate patients). We may refer to the local Chronic Pain Service for pelvic pain and we also utilise gynaecological pain specialists interstate. Our two (female) psychologists see pelvic pain patients, which may include dealing with pain, stress, the impact on work and life, or past adverse childhood experiences. Our GPs may refer to other psychologists locally as needed, including via ATAPS if finances make this appropriate, and to a local psychologist who specialises in hypnosis. Other referrals that our GPs make for pelvic pain, endo and hormone issues can include to a naturopath we work with (who used to work in-house) or for acupuncture (which can help pain, stress and hormonal issues), AND TO OUR INTEGRATIVE DOCTOR WHO PRESCRIBES MEDICINAL CANNABIS. Other local allied health services that may be utilised include exercise physiology (although our pelvic floor therapist physio provides exercise programs so this is usually not required); and dietetics/nutrition to support general health. Phone mentoring is available via 1800 Ask Endo.

Section 2: Extended response questions

6. Provide any further information or GP practice details to support the application against the selection criteria (200 words max.)	Northside is perfectly positioned to provide multi-disciplinary care for endometriosis and pelvic pain. Our accredited practice of all female practitioners has capacity and willingness to accept new patients to our GP-led multidisciplinary team with expertise in the management of endometriosis and pelvic pain, and strength in this area due to one s22 pelvic floor therapists. We have four female GPs, all competent in women's health. Two of the GPs have worked at Family Planning for many years and they offer high level sexual and reproductive health care including IUD insertion and medical termination of pregnancy. All our GPs have a high level of skill in women's health. We have two additional specialised GP services in LGBTIQ health with a particular prevalence of trans and gender diverse people, and integrative medicine including cannabis prescribing. We have a pelvic floor physiotherapist 4 days a week, s22 They provide a very high level of expertise and care for pelvic pain and endometriosis, and the provision of onsite therapeutic ultrasound used in biofeedback imaging of the bladder and pelvic floor. We have two female psychologists including one with a special interest in peri-natal and youth mental health and the other in mindfulness, meditation and psychoneuroimmunological pain management. We have a practice nurse trained in sexual and reproductive health, women's health and cervical screens. s22

		60	890
Total		**10550**	**28501**

This document has been released under the Freedom of Information Act 1982 (Cth) By the Department of Health, Disability and Ageing

Data Notes
**nr = not reported*

Between April 2023 and June 2025, the EPPCs delivered approximately 28,501 services to 10,550 unique patients across the 22 clinics operating in Australia at the time. Reporting periods between PHNs vary due to commencement of operation dates.

The number of services refers to total clinical service occasions, and the number of patients refers to unique active patients accessing the EPPC service.

Clinic-level data was recently reported by PHNs in September 2025 for the reporting period 1 July 2024 to 30 June 2025 and does not include any of the new EPPCs (only the original 22).

EPPC waitlist times

Friday, 17 April 2026 10:45 AM

Less than 4 week wait = green
More than 4 week wait = yellow
Several month wait = red
