

Investing in Health and Medical Research – Medical Research Future Fund 10-year investment plan

The Government will continue its commitment to supporting lifesaving medical research with a \$5 billion 10-year investment plan from the Medical Research Future Fund (MRFF). It will place Australia at the leading edge of research in areas like genomics and will support the search for cures and treatments, including for rare cancers.

The plan is underpinned by four key themes – patients, researchers, translation and missions. This includes \$614 million for Clinical Trials for Rare Cancers, Rare Diseases and Unmet Needs.

Developing new drugs, devices, treatments and cures may take more than a decade. This 10-year plan will give researchers and industry certainty and direction and will reaffirm Australia's reputation as a world leader in medical research. With this in mind, funding for all existing MRFF programs will be continued.

This 10-year plan builds on \$3.5 billion in health and medical research funding provided through the National Health and Medical Research Council, and the \$500 million Biomedical Translation Fund.

Why is this important?

Today's research is tomorrow's health care. There is no better way to ensure Australians receive the highest quality health care than by investing in medical research. These new programs will harness innovation, deliver more clinical trials, provide vital infrastructure and improve patient outcomes.

Who will benefit?

People will be able to access cutting edge therapies and health services. Researchers and industry will also benefit through ongoing support for their vital work.

How much will this cost?

This will cost \$5 billion. The funds are disbursements from the ongoing \$20 billion MRFF endowment fund.
