

National HPV 3 dose vaccination coverage for females turning 15 years of age in 2013

Graph 1. HPV 3 dose vaccination coverage for females turning 15 years of age in 2013.

Table 1. HPV 3 dose vaccination coverage for females turning 15 years of age in 2013.

State	Estimated resident population (as at 30/06/2013)	Dose 1		Dose 2		Dose 3		Total Doses
		Number	Coverage	Number	Coverage	Number	Coverage	
ACT	2,163	1,973	91.2%	1,822	84.2%	1,545	71.4%	5,340
NSW	43,569	35,040	80.4%	32,912	75.5%	30,177	69.3%	98,129
NT	1,467	1,494	101.8%	1,404	95.7%	1,268	86.4%	4,166
QLD	29,314	24,216	82.6%	23,200	79.1%	21,138	72.1%	68,554
SA	9,833	8,378	85.2%	8,020	81.6%	7,214	73.4%	23,612
TAS	3,088	2,473	80.1%	2,315	75.0%	2,036	65.9%	6,824
VIC	32,839	28,002	85.3%	26,784	81.6%	24,700	75.2%	79,486
WA	14,877	12,223	82.2%	11,868	79.8%	10,820	72.7%	34,911
AUS	137,150	113,799	83.0%	108,325	79.0%	98,898	72.1%	321,022

Notes:

- Data extracted from the National HPV Vaccination Program Register (HPV Register) as at 4 July 2018 and includes females vaccinated between April 2007 and June 2018.
- Includes doses that comply with the recommended vaccine dosage and administration as per the Australian Immunisation Handbook (up to 3 doses administered at prescribed intervals).

- Population is Estimated Resident Population 2013 (as at 30/06/2013) from the Australian Bureau of Statistics - Cat 3101.0 Australian Demographic Statistics, Tables 51 to 58: Estimated Resident Population by Single year of age by State and Territory, FINAL based on 2016 census data published June 2018.
- Age is age as at date of ERP estimate (30th June).
- Coverage is calculated as doses administered and reported to the HPV Register/Estimated Resident Population expressed as a percentage.
- Excludes consumers who do not wish their details to be recorded on the HPV Register.
- The National HPV Vaccination Program initially provided quadrivalent HPV vaccine for all females aged 12-26 years as at mid 2007 (school program commenced April 2007 and GP/community program in July 2007) until end December 2009. From 2009 the Program offered HPV vaccination routinely to females in the first year of high school (usually at 12-13 years). From 2013, males were also offered HPV vaccination routinely in the first year of high school (age 12-13 years), with a catch-up program available for males aged 14-15 years in 2013 and 2014.
- As the ages of students in the first year of high school varies between jurisdictions, age 15 is used as the age for routine review of vaccination coverage that provides the best comparison to allow for these varying ages in administration, as per World Health Organization (WHO) recommendations.
- HPV Vaccination doses administered through general practice and in other community settings may be incompletely notified to the HPV Register. The extent of under notification differs by jurisdiction, with the Northern Territory and Queensland expected to have the most complete notification, due to notification of doses via State based immunisation registers.
