

National HPV 3 dose vaccination coverage for males turning 15 years of age in 2014

Graph 1. HPV 3 dose vaccination coverage for males turning 15 years of age in 2014.

Table 1. HPV 3 dose vaccination coverage for males turning 15 years of age in 2014.

State	Estimated resident population (as at 30/06/2014)	Dose 1		Dose 2		Dose 3		Total Doses
		Number	Coverage	Number	Coverage	Number	Coverage	
ACT	2,205	1,798	81.5%	1,709	77.5%	1,425	64.6%	4,932
NSW	46,137	32,570	70.6%	31,163	67.5%	26,585	57.6%	90,318
NT	1,609	1,305	81.1%	1,209	75.1%	1,042	64.8%	3,556
QLD	30,568	22,307	73.0%	21,229	69.4%	19,071	62.4%	62,607
SA	10,333	7,840	75.9%	7,517	72.7%	6,639	64.3%	21,996
TAS	3,378	2,457	72.7%	2,306	68.3%	1,966	58.2%	6,729
VIC	35,302	27,590	78.2%	26,367	74.7%	23,940	67.8%	77,897
WA	15,905	11,432	71.9%	10,941	68.8%	10,035	63.1%	32,408
AUS	145,437	107,299	73.8%	102,441	70.4%	90,703	62.4%	300,443

Notes:

- Data extracted from the National HPV Vaccination Program Register (HPV Register) as at 4 July 2018 and includes males vaccinated between April 2007 and June 2018.
- Includes doses that comply with the recommended vaccine dosage and administration as per the Australian Immunisation Handbook (up to 3 doses administered at prescribed intervals).

- Population is Estimated Resident Population 2014 (as at 30/6/2014) from the Australian Bureau of Statistics - CAT 3101.0 Australian Demographics Statistics, Tables 51 to 58: Estimated Resident Population by Single Year of Age by State and Territory, FINAL based on 2016 census data published June 2018.
- Age is age as at date of ERP estimate (30th June).
- Coverage is calculated as doses administered and reported to the HPV Register/Estimated Resident Population expressed as a percentage.
- Excludes consumers who do not wish their details to be recorded on the HPV Register.
- The National HPV Vaccination Program initially provided quadrivalent HPV vaccine for all females aged 12-26 years as at mid 2007 (school program commenced April 2007 and GP/community program in July 2007) until end December 2009. From 2009 the Program offered HPV vaccination routinely to females in the first year of high school (usually at 12-13 years). From 2013, males were also offered HPV vaccination routinely in the first year of high school (age 12-13 years), with a catch-up program available for males aged 14-15 years in 2013 and 2014.
- As the ages of students in the first year of high school varies between jurisdictions, age 15 is used as the age for routine review of vaccination coverage that provides the best comparison to allow for these varying ages in administration, as per World Health Organization (WHO) recommendations. These are the first national estimates for coverage in males at age 15 and reflect vaccination during the male catch-up program 2013-2014 rather than routine vaccination of males in the first year of high school.
- HPV Vaccination doses administered through general practice and in other community settings may be incompletely notified to the HPV Register. The extent of under notification differs by jurisdiction, with the Northern Territory and Queensland expected to have the most complete notification, due to notification of doses via State based immunisation registers.
