

National HPV 3 dose vaccination coverage for males turning 15 years of age in 2016

Graph 1. HPV 3 dose vaccination coverage for males turning 15 years of age in 2016.

Table 1. HPV 3 dose vaccination coverage for males turning 15 years of age in 2016.

State	Estimated resident population (as at 30/06/2016)	Dose 1		Dose 2		Dose 3		Total Doses
		Number	Coverage	Number	Coverage	Number	Coverage	
ACT	2,208	1,903	86.2%	1,833	83.0%	1,576	71.4%	5,312
NSW	46,593	37,556	80.6%	36,490	78.3%	34,715	74.5%	108,761
NT	1,640	1,584	96.6%	1,476	90.0%	1,348	82.2%	4,408
QLD	31,725	23,380	80.0%	24,388	76.9%	22,473	70.8%	72,241
SA	10,070	8,404	83.5%	8,090	80.3%	7,309	72.6%	23,803
TAS	3,279	2,568	78.3%	2,394	73.0%	2,092	63.8%	7,054
VIC	35,861	29,866	83.3%	28,772	80.2%	26,709	74.5%	85,347
WA	15,625	13,489	86.3%	13,046	83.5%	12,202	78.1%	38,737
AUS	147,001	120,750	82.1%	116,489	79.2%	108,424	73.8%	345,663

Notes:

- Data extracted from the National HPV Vaccination Program Register (HPV Register) as at 4 July 2018 and includes males vaccinated between April 2007 and June 2018.
- Includes doses that comply with the recommended vaccine dosage and administration as per the Australian Immunisation Handbook (up to 3 doses administered at prescribed intervals).

- Population is Estimated Resident Population (ERP) provided by the Australian Bureau of Statistics (ABS): 2007, 2008, 2009, 2010 & 2011 - Estimated Resident Population on 2012 boundaries (final), females by Single Year of Age 10-40, for all Local Government Areas in Australia - customised reports prepared April 2014.
- Age is age as at date of ERP estimate (30th June) for the specified year.
- Coverage is calculated as doses administered and reported to the HPV Register/Estimated Resident Population expressed as a percentage.
- Excludes consumers who do not wish their details to be recorded on the HPV Register.
- The National HPV Vaccination Program initially provided quadrivalent HPV vaccine for all females aged 12-26 years as at mid 2007 (school program commenced April 2007 and GP/community program in July 2007) until end December 2009. From 2009 the Program offered HPV vaccination routinely to females in the first year of high school (usually at 12-13 years). From 2013, males were also offered HPV vaccination routinely in the first year of high school (age 12-13 years), with a catch-up program available for males aged 14-15 years in 2013 and 2014.
- As the ages of students in the first year of high school varies between jurisdictions, age 15 is used as the age for routine review of vaccination coverage that provides the best comparison to allow for these varying ages in administration, as per World Health Organization (WHO) recommendations. These are the first national estimates for coverage in males at age 15 and reflect vaccination during the male catch-up program 2013-2014 rather than routine vaccination of males in the first year of high school.
- HPV Vaccination doses administered through general practice and in other community settings may be incompletely notified to the HPV Register. The extent of under notification differs by jurisdiction, with the Northern Territory and Queensland expected to have the most complete notification, due to notification of doses via State based immunisation registers.
