**Objective** | Build on the ‘3-Step Framework for a COVIDSafe Australia’, to nationally reopen to a state of ‘COVID Normal’, wherever it is safe to do so, by December 2020

**Open Australia**

While restrictions put in place through 2020 have operated to slow the spread of COVID-19. But the Australian community and industry have been heavily impacted by these limitations.

The aim of this framework is to provide consideration and guidance for a reopening of Australia whilst managing the health impacts and severity of COVID-19.

It is acknowledged that states and territories have the decision making authority in relation to public health measures. The national strategy is suppression with a goal of no community transmission.

“Quarantine constitutes a **first line** of defence in preventing the importation of COVID-19. While the quarantine system should be managed to limit breaches, the robustness of elements of the **second line** of defence (testing, contact tracing in the community) are also crucial as it will not be possible to manage a quarantine system that is completely error free. And must be backed by a **third line** of defence – physical distancing, hygiene and health system capacity.”

- National Review of Hotel Quarantine, 2020

PROTECTING THE WELLBEING, HEALTH AND SAFETY OF ALL AUSTRALIANS

KEY PRINCIPLES

Measures that are proportionate | Use of COVIDSafe plans, effective testing and contact tracing, strong guidance to individuals around their responsibilities, and targeted restrictions, including around gatherings and activities. Response measures and decisions are proportionate to the risk of harm and transmission, with a commitment to a nimble, targeted and localised response as informed by clear health advice, data and modelling.

Consistent approach | Commit to a national approach between state and territory jurisdictions to the opening up of the economy and removing border restrictions, while continuing to implement the agreed COVID-19 suppression strategy, towards the goal of no community transmission.

Protect national wellbeing | Decision making accounts for minimising displacement of workers and long-term damage to career paths, and considers the long term effects on mental health and wellbeing due to unemployment, social isolation and the protracted pandemic.

Well communicated | Community expectations are managed through clear communication of risk, balanced with messages to increase public confidence where risk is low. Ensure the public (with attention to culturally and linguistically diverse communities) and business understands and complies with the rules through consistent and timely messaging, targeted government support and appropriate enforcement.

Support confidence to allow economic activity to continue and/or restart | Support economic activity through community and consumer confidence. Ensure businesses understand their obligations to manage the health and safety risks that their operations present, and build business confidence and adaptive capacity through the recovery.
1. Surveillance

- A streamlined system of daily reporting of cases and clusters *
- Robust epidemiological data around cases and clusters *
- Routine wastewater testing to identify undetected disease in a mix of regional and metropolitan areas *
- Data for the Common Operating Picture (COP) and revision of metrics to inform the response *
- AHPPC monthly review of innovative and novel testing platforms, including international experience and published literature to enable setting-appropriate detection of disease

2. Quarantine and isolation

- Best practice quarantine and isolation practices in line with the findings of the Halton review
- Daily epidemiological data about individuals and disease detected in quarantine *

3. Testing and contact tracing

- Continue communication strategies to encourage testing uptake to detect disease in people with acute respiratory illness *
- Enable a surge laboratory capacity of 3 tests per 1000 population per day
- Measure test turnaround times and respond as suitable to delays of over 2 days
- Detect all chains of transmission by contact tracing down stream and upstream contacts with all close contacts notified within 2 days *

4. Outbreak responsiveness

- Rapid deployment of skilled outbreak management teams *
- Plans to scale up the response *
- Support detection of disease outside of the immediate response zone e.g. local government areas or local health networks
- Ensure an embedded Aged Care Response Centre in each jurisdiction

* Note: Halton and Finkel reviews are subject to separate National Cabinet considerations.

There is an ongoing and potentially increased risk of introduction of COVID-19 from overseas. In addition to strong quarantine and isolation, we need ongoing cooperation of the public to undertake activities in a COVIDSafe manner and to continue to present for testing. Australia’s response and continued work is based on the science and evidence around transmission of the disease. To be COVIDSafe requires continuous evaluation of the effectiveness and implementation of the plans. Measures to identify and manage localised outbreaks should be driven by public health advice, with a focus on vulnerable populations such as indigenous communities, aged care and people with a disability.
The following provides a snapshot of the sectors that have been severely impacted by the implementation of COVID-19 restrictions, including border restrictions, limits on business and social distancing measures. While COVID-19 continues to have significant impacts on Australian businesses, these impacts continue to evolve in response to changes in restrictions and policy announcements including the Federal Budget. This does not form part of the framework and is for context only.

Industry impacts vary across jurisdictions.

### Sectors CRITICALLY AT RISK from COVID-19 restrictions.

- **Aviation** at major airports is down more than 95 per cent on pre-COVID levels.
- Non-food sales in Victoria up to 65 per cent lower than a year ago. Melbourne’s main retail location vacancy rates are 50 per cent higher than two years ago.
- 126,000 arts, sports and entertainment services workers are expected to lose their jobs.
- Australia’s universities are forecast to have significant impact to revenue due to the fall in international student tuition fees and other income.
- The number of tourism industry jobs fell by 109,000 over the year to 611,700 in the June quarter. This is the lowest number of tourism jobs since 2014.

### Sectors AT RISK from COVID-19 restrictions.

- Independent food and beverage retailers expected to reduce service levels by up to 65.4 per cent.
- Hospitality industry expects 30 per cent of businesses will close permanently this year.
- The manufacturing sector continues to be dependent on recovery in other sectors, particularly construction. Demand is expected to be down 15 per cent nationally.
- The COVID-19 pandemic could cut demand for housing in Australia by between 129,000 and 232,000 dwellings over the next three years.
- Many small businesses operating on extremely slim cash reserves, with funds for three months or less.

**Sticking to National Cabinet’s Three Step framework, managing health risks effectively and supporting the economy**

- National Cabinet’s May 2020 3 Step Framework for a COVIDSafe Australia was based on public health advice and intended to mitigate the significant risk of COVID-19 and has informed this framework.
- There are widespread concerns from industry that inconsistencies between state/territory approaches to reopening continue to destabilise businesses and consumers.
- These sectors are crucial enablers and have economic links with other activities – restrictions impacting them will hit the supply chain downstream and upstream.
Workplaces must meet the relevant COVIDSafe planning and implementation obligations of state and territory jurisdictions. Each jurisdiction has published approaches on their respective websites for either a COVIDSafe Plan or COVID Safety Plan, noting these are functionally the same.

Generally, COVIDSafe Plans set out how workplaces are prepared to protect staff and customers to prevent infection, respond to a COVID-19 case and business recovery. Plans should address the advice of Safe Work Australia regarding identifying and controlling infection hazards, assessing and controlling risks, and case-notification steps. Work health and safety requirements depend on workplace circumstances and state and territory regulations, but should address:

- a specific COVID-19 risk assessment and implementation of measures to manage identified risks
- information on requirements for physical distancing and measures to ensure appropriate distancing
- guidance on how workers and others can maintain good hygiene in the workplace
- guidance on cleaning and disinfecting the workplace to protect workers and others from the risk of exposure to COVID-19.

Industry-specific guidance that may assist with determining the risks of COVID-19 is available from Safe Work Australia. Each jurisdiction provides information on their website by industry.

Safety practices can mitigate the need for restrictions where local conditions allow

Where risks can be managed through health and safety practices (COVIDSafe Plans), costlier action is needed less.

If state and territory health authorities judge COVIDSafe Plans not enough for certain activities, tailored ‘High Risk COVIDSafe Plan’ requirements could impose stricter standards while still allowing safe businesses open their doors.

Strong testing and contact tracing systems and outbreak management, increase our capacity to identify and handle cases of community transmission.
## COVIDSafe Plans

All jurisdictions have requirements for either a COVIDSafe Plan or a COVID Safety Plan for businesses. Requirements vary by jurisdiction including specific industry plans, digital registrations, templates, fact sheets or flexible to pre-defined criteria and COVID Marshals. A high level summary is provided below. The role of industry in supporting the national strategy is critical.

### COVID Industry preparedness by jurisdiction

The information below summarises each jurisdiction’s approach. There are no metrics on the number of plans created/endorsed by each state/territory.

**Victoria** | From 13 September 2020, it is mandatory for every Victorian business to have a COVID Safe Plan. High Risk industries must create a ‘HIGH RISK COVIDSafe plan’. [Link](#)

**NSW** | The NSW government provides sector based guidance, including checklists, for COVID Safety Plans for business. [Link](#)

**QLD** | The QLD government provides approved sector based COVIDSafe Industry Plans including checklists and roadmap. [Link](#) [Roadmap](#)

**ACT** | The ACT government provides guidance for COVID Safety Plans for business. The ACT does not require the use of a standard template when developing their COVID Safety Plan. [Link](#)

**SA** | The SA government provides guidance and online submissions. [Link](#)

**NT** | The NT government provides guidance for COVID Safety Plans for business including checklists. [Link](#)

**WA** | The WA government provides guidance including sector specific information. [Link](#)

**TAS** | The TAS government provides guidance for COVID Safety Plans for business including checklists. [Link](#)

### Freight protocol

The Freight Movement Protocol and Code should continue to apply when border controls are in place. Changes to border control measures will influence the application of the enforceable measures contained in the Freight Protocol and Code.

State and territory jurisdictions are responsible for enforcement of the measures included in the Code and are likely to reduce or remove measures when border controls are removed. While variation to the Freight Movement Protocol and Code is likely, there is an enduring role in ensuring national consistency for freight when releasing restrictions.

Businesses operating under a COVIDSafe plan should be unrestricted outside standard capacity or density caps. Activities are limited/restricted based on highest-risk and lowest economic impact, with input from evidence-based health advice and industry consultation.

Activities and venues identified in the AHPPC statement on very high risk environments may continue to be restricted including:

- night clubs
- dance venues and events
- large unstructured outdoor events, such as:
  - music festivals
  - food festivals
  - schoolies graduation festivals
  - carnivals
  - some community sporting events
  - other unticketed spectator events

Please refer to Page 10 for further information.

Community and industry communications strategies should be developed that considers consistency with previous public messaging and includes the below considerations regarding ongoing business activity.

**A staged reopening can expand the role of safety practices over time. Industry will be critical to self regulating and enforcing their COVIDSafe plans in order to operate.**

This risk-based framework is a consistent approach that can adapt to changing circumstances and tolerance for risk. As we move through the steps, COVIDSafe plans and risk assessments can become the benchmark for activities that were previously specifically restricted. Equally, should outbreaks emerge, tailored plans or restrictions may be needed for higher-risk activities in these places.

Certain activities will continue to require targeted requirements beyond COVIDSafe plans during this reopening phase based on assessed risk.
Regional responses that are more restrictive may apply for localised outbreaks. This framework is intended to apply only to areas that are not being treated under other conditions in response to an outbreak requiring health intervention. Health imposed restrictions will supersede any step in this framework for the defined region.

All steps are subject to change based on expert health advice. States and territories can implement changes based on their COVID-19 conditions, however steps should be sequential.

All operating businesses must have a COVIDSafe Plan | Physical distancing at 1.5 metres | Stay at home if unwell | Effective testing and contact tracing | Frequent cleaning and disinfection | COVIDSafe Plan auditing

STEP 1: Limiting group interactions and movement
New locally acquired cases indicator on the Common Operating Picture is green for 14 days AND <3 cases in either high transmission settings or hard to reach populations.

Work
- Work from home if able.

Gatherings
- Occupancy of venues, indoor and outdoor gatherings, and events are capacity limited to specific numbers.

Travel
- Free movement between areas with no community transmission of COVID-19 should be permitted.

STEP 2: Larger gatherings, more movement
New locally acquired cases indicator on the Common Operating Picture is green for 14 days AND no cases in either high transmission settings or hard to reach populations.

Work
- Work from home if and where it suits you and your employer.

Gatherings
- Occupancy of venues and gatherings are limited to one person per two or four square metres (as determined by the jurisdiction).

Travel
- Removal of domestic borders - Free movement between areas with no community transmission of COVID-19 should be permitted. Initial international student and seasonal worker pilots underway.

STEP 3: COVID NORMAL
All indicators on the Common Operating Picture are green for 14 days

Work
- Return to your workplace (unless otherwise advised by public health advice).

Gatherings
- People should maintain social distancing of 1.5 metres and stay at home if unwell and get tested. Some density limits will remain for events and large venues.

Travel
- Interstate travel is open and there are no domestic border restrictions in place. International travel partnerships and pilot programs in place. Quarantine free international travel between New Zealand and other low risk international partners.
**PROPOSED NEW 3 STEP PLAN TO SUSTAIN A COVID NORMAL AUSTRALIA**

**STEP 1: Limiting group interactions and movement**

- Outdoor gatherings of up to 10 people
- Up to 5 visitors at home in addition to normal residents
- Work from home if able
- Avoid public transport in peak hour
- All operating businesses must have a COVIDSafe Plan
- Physical distancing at 1.5 metres
- Stay at home if unwell
- Effective testing and contact tracing
- Frequent cleaning and disinfection

**STEP 2: Larger gatherings, more movement**

- All gatherings adhere to 2 or 4 square metre rule
- Work from home if and where it suits you and your employer.
- Avoid public transport in peak hour
- Jurisdictional cap on numbers
- All operating businesses must have a COVIDSafe Plan
- Physical distancing at 1.5 metres
- Stay at home if unwell
- Effective testing and contact tracing
- Frequent cleaning and disinfection

**STEP 3: COVID NORMAL**

- No restrictions on gatherings, stay 1.5m apart, stay home if unwell and get tested
- Unless otherwise advised by public health advice return to your workplace
- All operating businesses must have a COVIDSafe Plan
- Physical distancing at 1.5 metres
- Stay at home if unwell
- Effective testing and contact tracing
- Frequent cleaning and disinfection

**Target Date: Christmas 2020**
### National Review of Hotel Quarantine

The findings from the National Review of Hotel Quarantine, led by Jane Halton AO, will be considered at National Cabinet in parallel with this framework.

All jurisdictions should consider the recommendations of the review and implement them as part of their reopening process.

### Finkel Review | Coordinating public health response

Dr Alan Finkel AO, has been appointed to lead a review of the systems and operations in all jurisdictions to strengthen capacity and capability to effectively test, trace and isolate COVID-19.

Outputs from the review will inform a national approach to:

- Streamlining and measuring national testing, contact tracing, quarantine and isolating, and outbreak management
- Exchanging data between jurisdictions in a timely and transparent way that supports nationally supported contact tracing and outbreak management
- Enabling a national standing surge capacity
- Determine the state of preparedness for an open society and fully-active economy by Christmas.

### Ongoing COVID identification and management

In order to monitor and maintain Australia’s national strategy for suppression, various initiatives are underway to support gathering data and evidence including but not limited to:

**COVID Testing, monitoring and reporting** | information on ongoing clinical testing and clinics is available through jurisdictional websites and the Department of Health. Ongoing reporting and epidemiology form part of a suite of data to inform the national strategy.

**Wastewater testing for COVID-19** | various jurisdictions are undertaking wastewater testing, analysis and monitoring as part of a surveillance strategy, particularly for outbreaks and an early warning tool to alert communities to infections.

**Genome sequencing and tracing** | leading research institutes are undertaking genome sequencing to track COVID-19 including viral mutations and provide early warning signals of emerging strains and detection. Australia’s Medical Research Future Fund (MRFF) has provided a $3.3 million grant through UNSW Sydney’s School of Medical Sciences to establish the network.

**COVID-19 vaccine development and testing** | the Department of Health lead the COVID-19 Vaccine and Treatment Strategy which supports access to, and delivery of safe and effective COVID-19 vaccines and treatments, as soon as they are available.
## Common Operating Picture

Data sources and additional resources

The Communicable Diseases Network Australia (CDNA) and the Australian Health Protection Principal Committee (AHPPC) have informed the traffic light thresholds in the operating picture. Data are sourced from:

- the National Notifiable Diseases Surveillance System (NNDSS);
- the Critical Health Resource Information System;
- aged care facility report;
- modelling; and
- daily reports from state and territory health departments.

Most metrics use a rate or proportion rather than a raw number, to account for variability between state and territory populations.

Due to the dynamic nature of jurisdictional daily reports and thus NNDSS data, data in this report are subject to retrospective revision and may vary from data reported in published NNDSS reports and reports of notification data by states and territories.
