

Vaccine safety in Australia 2019

We actively monitor immunisation safety in Australia.

7,772 parents/carers responded to an SMS about their child's health a few days after their 18-month vaccinations.

88%

reported **no** adverse events

12%

reported any adverse event, including ...

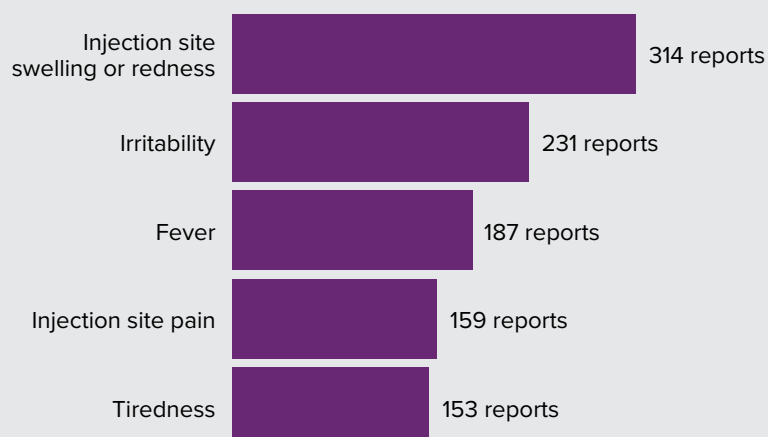

1.4%

who reported taking their child to a doctor or emergency department in the days after vaccination.

The adverse events they reported were similar to the types of adverse events reported overall.

955 parents/carers reported one or more adverse events. The most commonly reported were:

These symptoms are known to occur after vaccination. They are generally mild and short-lived.

These symptoms are also common in young children for other reasons (such as viral infection) and **may not be related to vaccination.**
