Independent Reviews of the CDR and ABDR

- In June 2017, the Department engaged HealthConsult to undertake an independent review of the Cardiac Devices Registry (CDR) and the Australian Breast Device Registry (ABDR).
- The purpose of the review was to assess the extent to which the registries met or are likely to meet their objectives.
- The key findings of the review indicated that the CDR is not a clinical quality registry as it does not include the required outcomes and procedure data and participation in the CDR is low due to a number of factors including low level of engagement from state-based registries.
